This guidance is as adopted by the NAIC as of December 1998, and is effective January 1, 2001. Please note that there will be modifications to the accounting guidance included in this manual from year to year as such guidance is subject to the maintenance process. The maintenance process dictates that substantive changes to the accounting guidance included herein will be in the form of new issue papers and SSAPs adopted by the NAIC.

Appendix B - Interpretations of the Emerging Accounting Issues Working Group

As of December 31, 1998, there were no consensus interpretations reached by the Emerging Accounting Issues Working Group. The minutes of the Emerging Accounting Issues Working Group prior to the adoption of Codification were considered in the development of SSAPs 1 – 73 and are only considered authoritative literature to the extent that the conclusion was adopted in an individual SSAP.

Codification of Statutory Accounting Principles

Preamble

I. Accounting Practices and Procedures Promulgated by the NAIC

1. The NAIC, through its committees and working groups, facilitates many projects of importance to the insurance regulators, industry, and users of statutory financial information. That is evidenced by the mission statement and charges of the NAIC Accounting Practices and Procedures (EX4) Task Force of the Financial Condition (EX4) Subcommittee (Accounting Practices and Procedures Task Force).

2. The mission of the Accounting Practices and Procedures Task Force is to identify, investigate and develop solutions to accounting problems with the ultimate goal of guiding insurers in properly accounting for various aspects of their operations and to modify the NAIC Accounting Practices and Procedures Manuals for Property and Casualty Insurance Companies, for Life, Accident and Health Insurance Companies, and for Health Maintenance Organizations (Accounting Practices and Procedures manuals) to reflect changes necessitated by task force action and to study innovative insurer accounting practices which affect the ability of regulators to determine the true financial condition of insurers.

3. To carry out the mission, the Accounting Practices and Procedures Task Force is charged with carrying out the following initiatives:

- Provide authoritative guidance to insurance regulators on current statutory accounting issues.

- Continue evaluation of statutory accounting principles for purposes of development, expansion and codification.

- Extend evaluation of statutory accounting principles to address areas specific to health entities.

- The Codification of Statutory Accounting Principles Working Group will maintain codified statutory accounting principles by providing periodic updates to the guidance which address new statutory issues and new generally accepted accounting principles (GAAP) pronouncements as they develop.

4. This comprehensive guide to Statutory Accounting Principles, composed of the Preamble, the Statements of Statutory Accounting Principles (SSAPs), and the Appendices, is intended to respond to the initiatives noted above. The guide and interpretations of the Emerging Accounting Issues Working Group shall be referred to as the Accounting Practices and Procedures Manual - version effective January 1, 2001 (during the transition period until the 1998 version is no longer maintained and updated by the NAIC). The 1998 version of the Accounting Practices and Procedures Manual will be maintained and published until December 31, 2000. However, this Manual is not intended to preempt states’ legislative and regulatory authority. It is intended to establish a comprehensive basis of accounting recognized and adhered to in the absence of conflict with, or silence of, state statutes and/or regulations.
5. The principles established by this Manual are effective January 1, 2001. Accounting changes adopted to conform to the provisions of these statements shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle; however, specific effective dates, and transition or grandfathering rules, if any, are contained in each SSAP.

II. Background

A. An Accounting Environment for Insurance Companies

6. Accounting is the process of accumulating and reporting financial information about an economic unit or group of units. Relative to commercial enterprises, the users of accounting information include management, investors, potential investors, lenders, investment analysts, regulators, and customers. Although customers of most commercial enterprises have no direct financial interest therein and generally are only concerned with the price to be paid for the product or service purchased, they may use accounting information to make choices as to the entity with which they engage in a business transaction. This is particularly relevant to purchases of insurance products inasmuch as insurance contracts involve a promise to pay which may extend years into the future. Insurance products may provide benefits well in excess of the purchase price or premium. The benefits ultimately received are almost always greater than the price (premium) paid and can only be estimated at the time the product (policy) is purchased.

7. Insurance is regulated on a state by state basis in the United States. Each state has its own regulatory framework generally led by an insurance commissioner. Insurance commissioners are charged with overseeing the financial condition of insurance companies doing business in their jurisdictions and they require meaningful financial, statistical, and operating information about the companies. This financial oversight is designed to help ensure that policyholders and claimants receive the requisite benefits from the policies sold, often times such products having been sold years or decades prior to when the benefits are due. Frequently, this regulatory perspective differs markedly from the perspectives of other users of insurers’ accounting information. In recognition of these special concerns and responsibilities, statutory accounting principles have been established by statute, regulation, and practice.

B. Statutory Accounting Principles (SAP)

8. In simplest terms, SAP has been those accounting principles or practices prescribed or permitted by an insurer’s domiciliary state. Statutory accounting practices have been interspersed in the insurance laws, regulations, and administrative rulings of each state, the Accounting Practices and Procedures manuals, the Annual Statement Instructions, the NAIC Financial Condition Examiners Handbook, the NAIC Purposes and Procedures of the Securities Valuation Office manual, and NAIC committee, task force, and working group minutes. In addition, there are many statutory practices widely accepted by both insurers and regulators which have never been codified.

9. SAP is conservative in some respects but not unreasonably conservative over the span of economic cycles, or in recognition of the primary statutory responsibility to regulate for financial solvency. SAP attempts to determine at the financial statement date an insurer’s ability to satisfy its obligations to its policyholders and creditors.

C. Comparison Of GAAP And SAP

10. The objectives of GAAP reporting differ from the objectives of SAP. GAAP is designed to meet the varying needs of the different users of financial statements. SAP is designed to address the concerns of regulators, who are the primary users of statutory financial statements. As a result, GAAP stresses measurement of emerging earnings of a business from period to period, (i.e., matching revenue to
expense), while SAP stresses measurement of ability to pay claims in the future. This difference is illustrated by the fact that statutory policy reserves are intentionally established on a conservative basis emphasizing the long-term nature of the liabilities. Under GAAP, the experience expected by each company, with provision for the risk of adverse deviation, is used to determine the reserves it will establish for its policies. GAAP reserves may be more or less than the statutory policy reserves.

11. Some other differences between SAP and GAAP have included:

- GAAP has recognized certain assets which, for statutory purposes, have been either not admitted or immediately expensed. Policy acquisition costs are expensed as incurred under SAP since the funds so expended are no longer available to pay future liabilities. Insurance company financial statements prepared in accordance with GAAP defer costs incurred in the acquisition of new business and amortize them over the premium recognition period.

- Deferred income taxes have, historically, not been recognized under SAP.

- The methods of accounting for certain aspects of reinsurance under GAAP may have varied from SAP, e.g., credit for reinsurance in unauthorized companies.

D. Purpose of Codification

12. The purpose of the codification of statutory accounting principles is to produce a comprehensive guide to SAP for use by insurance departments, insurers, and auditors. Statutory accounting principles, as they existed prior to codification did not always provide a consistent and comprehensive basis of accounting and reporting. The prescribed or permitted statutory accounting model resulted in practices that could have varied from state to state. Insurance companies were sometimes uncertain about what rules to follow and regulators were sometimes unfamiliar with the accounting rules followed by insurers in other states. As a result, insurers’ financial statements were not always prepared on a comparable basis.

13. In engaging this project, it was necessary to revisit principles that had been developed over a long period of time and to consider recently identified accounting issues not currently addressed by SAP. In many cases, previously available choices of accounting methods were eliminated. Also considered was the current state of the regulatory environment and the tools more recently developed, such as risk-based capital (RBC). These new financial analytical tools allowed for a reconsideration of the level of conservatism necessary to achieve regulatory objectives.

14. The Codification project will result in more complete disclosures and more comparable financial statements, which will make the insurance departments’ analysis techniques more meaningful and effective. The project will provide examiners and analysts with uniform accounting rules against which companies’ financial statements can be evaluated. RBC, an important tool used by the states to measure solvency of insurers, will be reported more consistently with the benefit of codification.

E. History of Codification

15. In 1989, the NAIC adopted a Solvency Agenda designed to enhance the ability of state regulators to protect insurance consumers from the financial trauma of insurer insolvency. In recognition of the fact that enhancement of solvency regulation is an ongoing process, the agenda was updated in 1991. Since 1991, most major initiatives of the 1991 Solvency Agenda have been accomplished. They include: 1) revision of the NAIC Financial Condition Examiners Handbook, 2) development of a risk-based capital approach to define required levels of capital and surplus, 3) development of a model law on authorized insurer investments, 4) creation of a centralized financial analysis unit to perform comprehensive
analysis of insurance companies who may be troubled, 5) development of computerized analytical routines for use by state insurance departments, and 6) creation of a NAIC education fund.

16. The codification project is also a direct result of the 1991 Solvency Agenda. The goal was “evaluation of existing statutory accounting principles as presently outlined in the Accounting Practices and Procedures Manual for purposes of further development, expansion, and codification.”

17. Beginning in 1994, the NAIC’s efforts to codify SAP were strengthened and reorganized recognizing the need for expediency. There was both a commitment of substantial financial resources as well as the selection of a team of dedicated regulators who were willing to commit the time and effort necessary to accomplish one of the most significant undertakings that has been faced by the NAIC.

18. Recognition of this effort was given by the AICPA when in 1995 they issued Statement of Position 95-5—Auditor’s Report on Statutory Financial Statements of Insurance Enterprises (SOP 95-5) so that an auditor’s opinion on a “prescribed or permitted” basis could continue until codification was completed. SOP 95-5 states “The codification is expected to result in a hierarchy of statutory accounting practices that will provide a comprehensive basis of accounting that can be applied consistently to all insurance enterprises.” At that time, it was believed that once Codification was effective, in order for certified public accountants (CPAs) to issue opinions on statutory statements, SAP had to be considered an “Other Comprehensive Basis of Accounting” (OCBOA) by the American Institute of Certified Public Accountants (AICPA).

19. Codification is not intended to preempt state legislative and regulatory authority. While Codification is expected to be the foundation of a state’s statutory accounting practices, it may be subject to modification by practices prescribed or permitted by a state’s insurance commissioner. Statutory financial statements will continue to be prepared on the basis of accounting practices prescribed or permitted by the states. As a result, in 1998 the AICPA’s Insurance Companies Committee determined that it will not be necessary for the Auditing Standards Board to grant the Codification status as an OCBOA since it will not be the sole basis for preparing statutory financial statements. Further, auditors will be permitted to continue to provide audit opinions on practices prescribed or permitted by the insurance department of the state of domicile.

F. Scope of Project

20. The conceptual framework used in developing and maintaining statutory accounting principles for insurance companies is summarized in the Statutory Accounting Principles Statement of Concepts. The application of the concepts of conservatism, consistency and recognition assure that guidance developed and codified as part of this project is consistent with the underlying objectives of statutory accounting.

21. This Guide has been developed using the body of statutory accounting principles as prescribed in the statutory hierarchy of accounting guidance, which is incorporated into the Statement of Concepts. This hierarchy provides the guidance for judging the presentation of statutory financial statements in conformance with statutory accounting principles.
III. Statutory Accounting Principles Statement of Concepts

Purpose of Statement of Concepts for Statutory Accounting Principles

22. This document states the fundamental concepts on which statutory financial accounting and reporting standards are based. These concepts provide a framework to guide the National Association of Insurance Commissioners ("NAIC") in the continued development and maintenance of statutory accounting principles ("SAP" or "statutory basis") and, as such, these concepts and principles constitute an accounting basis for the preparation and issuance of statutory financial statements by insurance companies in the absence of state statutes and/or regulations.

23. The NAIC and state insurance departments are primarily concerned with statutory accounting principles that differ from GAAP reflective of the varying objectives of regulation. Recodification of areas where SAP and GAAP are parallel is an inefficient use of limited resources.

24. SAP utilizes the framework established by GAAP. This document integrates that framework with objectives exclusive to statutory accounting. The NAIC's guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC may specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC.

25. The body of statutory accounting principles is prescribed in the statutory hierarchy of accounting guidance. This hierarchy provides the framework for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

26. Statutory requirements vary from state to state. While it is desirable to minimize these variations, to the extent that they exist it is the objective of NAIC statutory accounting principles to provide the standard against which the exceptions will be measured and disclosed if material.

---

1 As stated in the NAIC's constitution, the NAIC is an association of chief insurance regulatory officials of the 50 states, the District of Columbia, American Samoa, Guam, Puerto Rico, and the Virgin Islands whose objective is to serve the public by assisting several state insurance supervisory officials, individually and collectively, in achieving the following fundamental insurance regulatory objectives:

1. Maintenance and improvement of state regulation of insurance in a responsive and efficient manner;

2. Reliability of the insurance institution as to financial solidity and guaranty against loss;

3. Fair, just, and equitable treatment of policyholders and claimants.

2 The GAAP framework applicable to insurance accounting is set forth in Statements of Financial Accounting Concepts One, Two, Five, and Six. These documents, promulgated by the Financial Accounting Standards Board, set forth the objectives and concepts which are used in developing accounting and reporting standards.
Objectives of Statutory Financial Reporting

27. The primary responsibility of each state insurance department is to regulate insurance companies in accordance with state laws with an emphasis on solvency for the protection of policyholders. The ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety. The cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders. An accounting model based on the concepts of conservatism, consistency, and recognition is essential to useful statutory financial reporting.

28. Statutory reporting applies to all insurers authorized to do business in the United States and its territories, and requires sufficient information to meet the statutory objectives. However, statutory reporting as contained in this guide is not intended to preempt state legislative and regulatory authority. The SAP financial statements include the balance sheet and related summary of operations, changes in capital and surplus, and cash flow statements. Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity's short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g., notes to financial statements, management's discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided.

Concepts

Conservatism

29. Financial reporting by insurance enterprises requires the use of substantial judgments and estimates by management. Such estimates may vary from the actual amounts for numerous reasons. To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.

30. Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.

Consistency

31. The regulators' need for meaningful, comparable financial information to determine an insurer's financial condition requires consistency in the development and application of statutory accounting principles. Because the marketplace, the economic and business environment, and insurance industry products and practices are constantly changing, regulatory concerns are also changing. An effective statutory accounting model must be responsive to these changes and address emerging accounting issues. Precedent or historically accepted practice alone should not be sufficient justifications for continuing to follow a particular accounting principle or practice which may not coincide with the objectives of regulators.
Recognition

32. The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.

33. The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

34. Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

35. Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

36. SAP income reflects the extent that changes have occurred in SAP assets and liabilities for current period transactions, except changes in capital resulting from receipts or distributions to owners. SAP income also excludes certain other direct charges to surplus which are not directly attributable to the earnings process, (e.g., changes in non-admitted assets).

Conclusion

37. This document states the fundamental concepts for financial statements presented on the basis of SAP. These concepts summarize the conceptual framework that the NAIC uses in developing and maintaining statutory accounting principles for insurance companies. These concepts will also assure that guidance will be provided consistently with the underlying objectives of statutory accounting and will aid in the review of emerging accounting issues.

38. The multitude of unique circumstances and individual transactions makes it virtually impossible for any codification of accounting principles to be totally comprehensive. Application of SAP, either contained in the SSAPs or defined as GAAP and adopted by the NAIC, to unique circumstances or individual transactions should be consistent with the concepts of conservatism, consistency, and recognition.
IV. Statutory Hierarchy

The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1:

- SSAPs including GAAP reference material Categories a, b and c from the GAAP Hierarchy, as defined in *Statement of Auditing Standards No. 69, The Meaning of Presents Fairly In Conformity with GAAP (SAS 69)*, to the extent it has been adopted by the NAIC and in the order of hierarchy specified by the AICPA.
  - Category a includes: FASB Statements and Interpretations, APB Opinions, and AICPA Accounting Research Bulletins.
  - Category b includes: FASB Technical Bulletins, AICPA Industry Audit and Accounting Guides, and AICPA Statements of Position.
  - Category c includes: Consensus positions of the FASB Emerging Issues Task Force and AICPA Practice Bulletins.

Level 2:

- Consensus positions of the Emerging Accounting Issues Working Group as adopted by the NAIC

Level 3:

- NAIC Annual Statement Instructions
- *NAIC Purposes and Procedures of the Securities Valuation Office* manual

Level 4:

- Statutory Accounting Principles Statement of Concepts

Level 5:

- GAAP reference material below category c in the GAAP Hierarchy

---

3 The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements One, Two, Five and Six to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.
39. If the accounting treatment of a transaction or event is not specified by the SSAPs, preparers, regulators and auditors of statutory financial statements should consider whether the accounting treatment is specified by another source of established statutory accounting principles. If an established statutory accounting principle from one or more sources in Level 2 or 3 is relevant to the circumstances, the preparer, regulator or auditor should apply such principle. If there is a conflict between statutory accounting principles from one or more sources in Level 2 or 3, the preparer, regulator or auditor should follow the treatment specified by the source in the higher level—that is, follow Level 2 treatment over Level 3.

40. Because of developments such as new legislation or the evolution of a new type of business transaction, there sometimes are no established statutory accounting principles for reporting a specific transaction or event. In those instances, it might be possible to report the event or transaction on the basis of its substance by selecting a statutory accounting principle that appears appropriate when applied in a manner similar to the application of an established statutory principle to an analogous transaction or event. In the absence of a SSAP or another source of established statutory accounting principles, the preparer, regulator or auditor of statutory financial statements may consider other accounting literature, depending on its relevance in the circumstances. Other accounting literature includes the Statutory Accounting Principles Statement of Concepts and GAAP reference material and accounting literature below category c in the GAAP hierarchy as defined in SAS 69. The appropriateness of other accounting literature depends on its relevance to the particular circumstances, the specificity of the guidance, and the general recognition of the issuer or author as an authority. For example, the Statutory Accounting Principles Statement of Concepts would be more authoritative than any other sources of accounting literature. Similarly, FASB Concepts Statements would normally be more influential than other sources below category d in the GAAP hierarchy.

V. Statements of Statutory Accounting Principles

41. This Guide consists primarily of Statements of Statutory Accounting Principles (SSAPs). SSAPs are the primary Accounting Practices and Procedures promulgated by the NAIC. These statements are the result of issue papers that have been exposed for public comment and finalized. Finalized issue papers are in Appendix C. While it is not intended that there be any significant differences between an underlying issue paper and the resultant SSAP, if differences exist, the SSAP prevails and shall be considered definitive.

42. SSAPs designated as Common Area apply to all insurers. Although the nomenclature or terms provided in the prescribed annual statement forms may vary among different types of insurers, only one set of nomenclature or terms may have been used in the SSAP. For example, the Statement of Income found in the Property and Casualty Annual Statement shall be considered as synonymous with the Summary of Operations found in the Life and Health Annual Statement.

43. Once promulgated, statements will only be amended or superseded through the issuance of new SSAP pronouncements. If it is necessary to modify or augment the guidance in a SSAP, a new statement will be promulgated. A useful tool for tracking of the relationships between statements is contained in the “Status” section of each statement which includes sections labeled “Affects” and “Affected By.” As SSAPs are issued in the future that modify or augment the guidance previously provided, these sections will identify the relationships between statements.

---

4 As specified by AU Section 411, paragraph 11.
VI. Materiality

44. Those who make accounting decisions and those who make judgments as regulators and auditors continually confront the need to make judgments about materiality. Materiality judgments are primarily quantitative in nature. They pose the question: Is this item large enough for users of the information to be influenced by it? However, the answer to that question will usually be affected by the nature of the item; items too small to be thought material if they result from routine transactions may be considered material if they arise in abnormal circumstances.

45. Materiality judgments are concerned with screens or thresholds. Is an item, an error, or an omission large enough, considering its nature and the attendant circumstances, to pass over the threshold that separates material from immaterial items? The more important a judgment item is, the finer the screen should be that will be used to determine whether it is material. For example:

- Circumstances where an accounting adjustment puts an insurer in danger of being in breach of a covenant or regulatory requirement may justify a lower materiality threshold than if its position were stronger. For example, an error resulting from an insurer incorrectly reporting certain nonadmitted assets as admitted assets might be considered material if the classification of those assets as nonadmitted would cause the insurer to trigger an event under the Risk-Based Capital requirements.

- A failure to disclose separately a nonrecurrent item of revenue may be material at a lower threshold than would otherwise be the case if the revenue turns a loss into a profit or reverses the trend of earnings from a downward to an upward trend.

- A miscategorization of assets or liabilities that would not be material in amount to the basic financial statements, but would cause the insurer to trigger an event under the Risk-Based Capital requirements, might be material.

- Amounts too small to warrant disclosure or correction in normal circumstances may be considered material if they arise from abnormal or unusual transactions or events.

46. Almost always, the relative rather than the absolute size of a judgment item determines whether it should be considered material in a given situation. Losses from bad debts that could be shrugged off as routine by a large insurer may threaten the continued existence of a small one. An error in reserve valuation may be material in a small insurer for which it cut earnings in half but immaterial in an insurer for which it might make a barely perceptible ripple in the earnings.

47. Another factor in materiality judgments is the degree of precision that is attainable in estimating the judgment item. The amount of deviation that is considered immaterial may increase as the attainable degree of precision decreases. For example, accounts payable usually can be estimated more accurately than can contingent liabilities arising from litigation or threats of it, and a deviation considered to be material in the first case may be quite trivial in the second.

48. Individual judgments are required to assess materiality. The essence of the materiality concept is clear. The omission or misstatement of an item in a statutory financial statement is material if, in the light of surrounding circumstances, the magnitude of the item is such that it is probable that the judgment of a reasonable person relying upon the statutory financial statement would have been changed or influenced by the inclusion or correction of the item.

49. The provisions of this Guide need not be applied to immaterial items.
VII. Relationship to GAAP

50. As expressed in the Statement of Concepts, SAP utilizes the framework established by GAAP. This Guide integrates that framework with objectives exclusive to statutory accounting. The NAIC's guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC may specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC. GAAP pronouncements that have been considered in the development of SAP are listed in Appendix B and include all issued pronouncements in categories a, b and c of the GAAP Hierarchy as of December 31, 1996. Future SAP pronouncements will specifically identify any GAAP pronouncements that are to be included in SAP whether in whole, in part, or with modification as well as any GAAP pronouncements that are rejected. Future GAAP pronouncements which SAP has not yet addressed shall not be considered as providing authoritative statutory guidance.

VIII. Relationship to Developments within NAIC

51. Various NAIC committees and their working groups will be involved in issues, at any point in time, that could impact accounting guidance. Recommendations that affect accounting guidance must be referred to the Accounting Practices and Procedures (EX4) Task Force which has the responsibility for the maintenance of codification for determination of appropriate inclusion in SAP.

52. There are instances where the codification working group has established an accounting principle in a SSAP but deferred maintenance and update of the detailed guidance to other NAIC task forces and their working groups. Those instances are specifically set forth in the individual SSAPs and include specific guidance for calculation of the Interest Maintenance Reserve (IMR), the Asset Valuation Reserve (AVR), the provision for overdue reinsurance, and periodic update to the NAIC Purposes and Procedures of the Securities Valuation Office manual.

53. Changes to statutory accounting principles are not authoritative until approved by the general membership of the NAIC.

IX. Financial Statements

A. Annual Financial Statement

54. Each state requires all insurance companies doing business in that state to file an annual financial statement. All states use the annual statement blank promulgated by the NAIC, but each state retains the authority to make changes in those statements. Changes made by states generally require only supplemental information and do not change the basic financial information.

55. To the extent that disclosures required by a SSAP are made within specific notes, schedules, or exhibits to the annual statement, those disclosures are not required to be duplicated in a separate note. Annual statutory financial statements which are not accompanied by annual statement exhibits and schedules (e.g., annual audit report) shall include all disclosures required by the SSAPs based on the applicability, materiality and significance of the item to the insurer. Certain disclosures, as noted in individual SSAPs, are required in the annual audited statutory financial statements only.
B. Interim Financial Statements

56. Interim financial statements, including quarterly statements, shall follow the form and content of presentation prescribed by the domiciliary state for the quarterly financial statements. The NAIC quarterly statement form has been adopted by each state with minor variations as required by certain states.

57. The interim financial information shall include disclosures sufficient to make the information presented not misleading. It may be presumed that the users of the interim financial information have read or have access to the annual statement for the preceding period and that the adequacy of additional disclosure needed for a fair presentation, except in regard to material contingencies may be determined in that context. Accordingly, footnote disclosure which would substantially duplicate the disclosure contained in the most recent annual statement or audited financial statements, such as a statement of significant accounting policies and practices, details of accounts which have not changed significantly in amount or composition since the end of the most recently completed fiscal year, may be omitted. However, disclosure shall be provided where events subsequent to the end of the most recent fiscal year have occurred which have a material impact on the insurer. Disclosures shall encompass, for example, significant changes since the end of the period reported on the last annual statement in such items as: statutory accounting principles and practices, estimates inherent in the preparation of financial statements, status of long term contracts, capitalization including significant new borrowings or modifications of existing financial arrangements, and the reporting entity resulting from business combinations or dispositions. Notwithstanding the above, where material noninsurance contingencies exist, disclosure of such matters shall be provided even though a significant change since year end may not have occurred.

Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the disclosure of accounting policies, risks and uncertainties, the use of accounting practices which depart from codified accounting practices, and other disclosures.

2. Separate statements of statutory accounting principles have disclosure requirements specific to the topics addressed in those statements. Additional disclosure requirements not addressed in other statements are included herein.

SUMMARY CONCLUSION

3. Refer to the preamble for further discussion of disclosure requirements. The disclosures required under paragraph 6 concerning changes in accounting policies shall be made for each financial statement presented. The disclosures required under paragraphs 9, 10, 12, 13, 14, 15 and 16 shall be included in the annual audited statutory financial reports only.

Accounting Policies and Practices

4. Accounting policies are defined as the specific accounting principles and the methods of applying those principles that are utilized in preparing the statutory financial statements.

5. Disclosure shall be made of all accounting policies that affect the assets, liabilities, capital and surplus or results of operations of the reporting company. The disclosure shall encompass important judgments as to the appropriateness of principles relating to recognition of revenue particularly when selecting between acceptable alternatives, or methods particular to the business.

6. Disclosure of accounting policies shall be made in a separate Summary of Significant Accounting Policies as the initial note in the notes to the financial statements. If the reporting entity has changed the accounting policies since the end of its preceding year, the changes shall be disclosed in the quarterly financial statements.

7. NAIC statutory accounting practices and procedures are those that are set forth in the Accounting Practices and Procedures Manual. If a reporting entity employs accounting practices that depart from the NAIC accounting practices and procedures, disclosure of the following information about those accounting practices that affect statutory surplus or risk-based capital shall be made:

   a. A description of the accounting practice;
   b. A statement that the accounting practice differs from NAIC statutory accounting practices and procedures; and
   c. The monetary effect on statutory surplus of using an accounting practice which differs from NAIC statutory accounting practices and procedures.

Appendix A-205 provides an illustration of the disclosure requirements described in paragraph 7.

8. Disclosure of the following information shall be made about accounting practices when NAIC statutory accounting practices and procedures do not address the accounting for the transaction:

   a. A description of the transaction and of the accounting practice used; and
b. A statement that NAIC statutory accounting practices and procedures do not address the accounting for the transaction.

**Risks and Uncertainties**

9. Companies shall make disclosures in their financial statements about risks and uncertainties existing as of the date of those statements in the following areas:

a. Nature of operations;

b. Use of estimates in the preparation of financial statements;

c. Certain significant estimates; and

d. Current vulnerability due to certain concentrations.

**Nature of Operations**

10. Financial statements shall include a summary of the ownership and relationships of the reporting entity and all affiliated companies, and a description of the major products or services the reporting entity sells or provides and its principal markets, including the locations of those markets. If the entity operates in more than one business, the disclosure should also indicate the relative importance of its operations in each business and the basis for the determination (e.g., assets, revenues, or earnings). Disclosures about the nature of operations need not be quantified; relative importance could be conveyed by use of terms such as predominately, about equally, or major.

**Use of Estimates in the Preparation of Financial Statements**

11. Financial statements shall include an explanation that the preparation of financial statements in conformity with the Annual Statement Instructions and Accounting Practices and Procedures Manuals requires the use of management's estimates.

**Certain Significant Estimates**

12. Disclosure regarding an estimate shall be made when known information available prior to issuance of the financial statements indicates that both of the following criteria are met:

a. It is at least reasonably possible that the estimate of the effect on the financial statements of a condition, situation, or set of circumstances that existed at the date of the financial statements will change in the near term due to one or more future confirming events; and

b. The effect of the change would be material to the financial statements.

13. The disclosure shall indicate the nature of the uncertainty and include an indication that it is at least reasonably possible that a change in the estimate will occur in the near term (generally a period of time not to exceed one year from the date of the financial statements). If the estimate involves a loss contingency as defined in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets, the disclosure shall include an estimate of the possible loss or range of loss, or state that such an estimate cannot be made. Reporting entities shall disclose the factors that cause the estimate to be sensitive to change.
Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures

Current Vulnerability Due to Certain Concentrations

14. Vulnerability from concentrations arises because an entity is exposed to risk of loss greater than it would have had it mitigated its risk through diversification. Such risks manifest themselves differently, depending on the nature of the concentration, and vary in significance.

15. Financial statements shall disclose the concentrations described in paragraph 16 of this statement if, based on information known to management prior to issuance of the financial statements, all of the following criteria are met:

a. The concentration exists at the date of the financial statements;

b. The concentration makes the enterprise vulnerable to the risk of a near-term severe (more than material but less than catastrophic) impact; and

c. It is at least reasonably possible that the events that could cause the severe impact will occur in the near term.

16. Concentrations, including known group concentrations, described below require disclosure if they meet the criteria of paragraph 15 of this statement. (Group concentrations exist if a number of counterparties or items that have similar economic characteristics collectively expose the reporting entity to a particular kind of risk.) Some concentrations may fall into more than one category:

a. Concentrations in the volume of business transacted with a particular customer, supplier, or lender. The potential for the severe impact can result, for example, from total or partial loss of the business relationship. For the purposes of this statement, it is always considered at least reasonably possible that any customer will be lost in the near term;

b. Concentrations in revenue from particular products or services. The potential for severe impact can result, for example, from volume or price changes for a particular source of revenue;

c. Concentrations in the available sources of labor, services, licenses, or other rights used in the entity’s operations;

d. Concentrations in the market or geographic area in which an entity conducts its operations. The potential for severe impact can result, for example, from negative effects of the economic and political forces within the market or geographic area. For the purposes of this statement, it is always considered at least reasonably possible that operations located outside an entity’s home country will be disrupted in the near term.

Other Disclosures

17. For each year that a balance sheet is presented, reporting entities shall disclose the following information in the financial statements:

a. Amounts not recorded in the financial statements that represent segregated funds held for others, the nature of the assets and the related fiduciary responsibilities associated with such assets. One example of such an item is escrow accounts held by title insurance companies; and

b. The amount and nature of any assets pledged to others as collateral.
SSAP No. 1  Statement of Statutory Accounting Principles

18. The financial statements shall disclose forward commitments which are not derivative instruments (e.g., the commitment to purchase a GNMA security two months after the commitment date, or a private placement six months after the commitment date).

Supplemental Investment Disclosure

19. For the current year, reporting entities shall disclose the information required by Appendix A-001 - Investments of Insurers. A Summary Investment Schedule and Investment Risk Interrogatories shall be filed with the audited statutory financial statements. The Summary Investment Schedule shall be filed with the Annual Statement whereas the interrogatories shall be filed as a supplement to the Annual Statement by April 1 for the applicable reporting period.

Relevant Literature

Effective Date and Transition

21. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

AUTHORITATIVE LITERATURE

Cash, Drafts, and Short-term Investments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles and related reporting for cash, drafts, and short-term investments.

SUMMARY CONCLUSION

Cash

2. Cash constitutes a medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor’s account.

3. Also classified as cash for financial statement purposes, although not falling within the above definition of cash, are savings accounts and certificates of deposit in banks or other similar financial institutions with maturity dates in one year or less from the acquisition date, and cash equivalents. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less qualify under this definition.

4. Cash meets the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4), and is an admitted asset to the extent it conforms to the requirements of this statement.

Treatment of Negative Cash Balances

5. If a reporting entity has multiple cash accounts, the net amount of all accounts shall be reported jointly. Cash accounts with positive balances shall not be reported separately from cash accounts with negative balances. If in the aggregate, the reporting entity has a net negative cash balance, it shall be reported as a negative asset and shall not be recorded as a liability.

Drafts

6. A draft is defined as an order to pay a sum certain in money. It is signed by the drawer (e.g., the insurance company or its agent), and payable to order or bearer (e.g., the policyholder). When the draft is presented to the drawee (i.e., the bank), it is paid only upon approval by the reporting entity.

7. Drafts and checks have different legal characteristics. A check is payable on demand, whereas a draft must be approved for payment by the reporting entity before it is honored by the bank. Because of these different characteristics, a draft meets the definition of a liability as defined by SSAP No. 5—Liabilities, Contingencies and Impairments of Assets. Outstanding checks are accounted for as as a reduction of cash.

8. A reporting entity that utilizes instruments meeting the definition of drafts shall elect one of the following accounting methods:

a. Draft Issued Method—When a draft is issued, an increase in paid losses and a related decrease in loss reserves is recorded. Drafts that have not been presented for payment and remain outstanding at the balance sheet date are reflected as a liability.
b. Draft Honored Method—An increase in paid losses and a related decrease in loss reserves is recorded when the draft is presented by the bank to the reporting entity for approval and reimbursement. Consequently, under a draft honored method there is no liability for outstanding drafts.

9. The method elected by a reporting entity to account for drafts issued and outstanding shall remain consistent from year to year. Procedures for changes in the accounting method shall be governed by SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

Short-term Investments

10. All investments with remaining maturities (or repurchase dates under repurchase agreements) of one year or less at the time of acquisition (excluding those investments classified as cash equivalents as defined in paragraph 3) shall be considered short-term investments. Short-term investments include, but are not limited to, bonds, commercial paper, money market instruments, repurchase agreements, and collateral and mortgage loans which meet the above criteria. Short-term investments shall not include certificates of deposit.

11. All short-term investments shall be accounted for in the same manner as similar long-term investments. Investments in money market funds shall be reported in accordance with the guidance in the NAIC Purposes and Procedures of the Securities Valuation Office.

12. Short-term investments meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.

Disclosures

13. The following disclosures shall be made for short-term investments in the financial statements:

a. Fair values in accordance with SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments (SSAP No. 27);

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. Basis at which the short-term investments are stated.

14. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

Accounting Changes and Corrections of Errors

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for changes in accounting, which include changes in accounting principles, estimates, and reporting entities, and for corrections of errors in previously issued financial statements.

SUMMARY CONCLUSION

2. An accounting change is defined as a change in an accounting principle, an accounting estimate, or the reporting entity. The correction of an error in previously issued financial statements is not deemed to be an accounting change. The treatment of a change resulting from an insurance department examination will depend on whether the change resulted from a correction of an error, a change in accounting principle, or a change in estimate.

Change in Accounting Principle

3. A change in accounting principle results from the adoption of an accepted accounting principle, or method of applying the principle, which differs from the principles or methods previously used for reporting purposes. A change in the method of applying an accounting principle shall be considered a change in accounting principle.

4. A characteristic of a change in accounting principle is that it concerns a choice from among two or more statutory accounting principles. However, a change in accounting principle is neither (a) the initial adoption of an accounting principle in recognition of events or transactions occurring for the first time or previously immaterial in their effect, nor (b) the adoption or modification of an accounting principle necessitated by transactions or events that are clearly different in substance from those previously occurring.

5. The cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods.

Change in Accounting Estimate

6. Changes in estimates used in accounting are necessary consequences of periodic presentations of financial statements which require estimating the effects of future events. Examples of items for which estimates are necessary include service lives of depreciable assets and changes in loss reserve estimates for property and casualty companies. Accounting estimates change as new events occur, as more experience is acquired, or as additional information is obtained.

7. A change in accounting estimate shall be included in the statement of income in the period when the change becomes known.

8. If the effect of a change in accounting principle is inseparable from the effect of a change in accounting estimate, then the change shall be considered as a change in accounting estimate for purposes of applying the accounting principles set forth in this statement.
Correction of an Error

9. Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared. In contrast, a change in accounting estimate results from new information, or subsequent developments and, accordingly, from better insight or improved judgment. Thus, an error is distinguished from a change in estimate.

10. Corrections of errors in previously issued financial statements shall be reported as adjustments to unassigned funds (surplus) in the period an error is detected.

Impact on Historical Schedules

11. Changes which do not affect assets, liabilities, revenues, expenses, or surplus but which materially affect historical information in the financial statement supplemental schedules (e.g., Schedule P for property and casualty insurers or Schedule O for life and accident and health insurers) shall be reflected in the current year’s schedules with appropriate notations made directly to the affected schedules and in the notes to the financial statements.

Mergers

12. For mergers, prior years’ amounts in the Annual Statement shall be restated as if the merger had occurred as of January 1st of the prior year. Additionally, restatement shall be required for the two most recent years included in the Five Year Historical Summary. The Five Year Historical Summary shall include a footnote indicating that the other three years have not been restated. A reporting entity that merges with an entity which effectively is a shell company (i.e., the reporting entity has no outstanding underwriting liabilities), shall be exempt from the above requirements.

Disclosures

13. Disclosure of material changes in accounting and correction of errors shall include:

   a. A brief description of the change, encompassing a general disclosure of the reason and justification for change or correction;

   b. The impact of the change or correction on net income, surplus, total assets, and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations); and

   c. The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material.

14. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

15. This statement rejects Accounting Research Bulletin No. 51, Consolidated Financial Statements and FASB Statement No. 94, Consolidation of All Majority-Owned Subsidiaries, an amendment of ARB 51, with related amendments of APB Opinion No. 18 and ARB No. 43, Chapter 12.
Accounting Changes and Corrections of Errors

16. This statement rejects paragraphs 1—19 and 26—27 of Accounting Principles Board Opinion No. 9, Reporting the Results of Operations, which address the treatment of extraordinary items and prior period adjustments and the related AICPA Accounting Interpretations, Reporting the Results of Operations: Unofficial Accounting Interpretations of APB Opinion No. 9. This statement also rejects Accounting Principles Board Opinion No. 20, Accounting Changes. AICPA Accounting Interpretations, Accounting Changes: Accounting Interpretations of APB Opinion No. 20, and FASB Interpretation No. 20, Reporting Accounting Changes under AICPA Statements of Position, an interpretation of APB Opinion No. 20. FASB Statement No. 16, Prior Period Adjustments, is rejected as corrections of errors in previously issued financial statements are reported as adjustments to unassigned funds (surplus).

Effective Date and Transition

17. This statement is effective for years beginning January 1, 2001.

AUTHORITATIVE LITERATURE
Generally Accepted Accounting Principles
RELEVANT ISSUE PAPERS
Assets and Nonadmitted Assets

SCOPE OF STATEMENT

1. This statement establishes the definition of an “asset” for use in statutory accounting and establishes the criteria for consistent treatment of nonadmitted assets.

SUMMARY CONCLUSION

2. For purposes of statutory accounting, an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others’ access to it, and (c) the transaction or other event giving rise to the entity’s right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph number 3 below.

3. As stated in the Statement of Concepts, “The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet,” and are, therefore, considered nonadmitted. For purposes of the Codification, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting, and is one which is:

   a. Specifically identified within the Codification as a nonadmitted asset; or
   b. Not specifically identified as an admitted asset within the Codification.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Codification. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity’s capitalization policy, immaterial amounts of furniture, fixtures, equipment, or supplies, can be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the Codification as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

Liabilities, Contingencies and Impairments of Assets

SCOPE OF STATEMENT

1. This statement defines and establishes statutory accounting principles for liabilities, contingencies and impairments of assets.

SUMMARY CONCLUSION

Liabilities

2. A liability is defined as certain or probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity’s financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

Loss Contingencies or Impairments of Assets

5. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below the following additional definitions shall apply:

   a. Probable—The future event or events are likely to occur;

   b. Reasonably Possible—The chance of the future event or events occurring is more than remote but less than probable;

   c. Remote—The chance of the future event or events occurring is slight.

6. A loss contingency or impairment of an asset is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).

---

1 FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states:

Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.
7. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

   a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

   b. The amount of loss can be reasonably estimated.

8. This accounting shall be followed even though the application of other prescribed statutory accounting principles or valuation criteria may not require, or does not address, the recording of a particular liability or impairment of an asset (e.g., a known impairment of a bond even though the SVO manual has not recognized the impairment).

9. Additionally, in instances where a judgment, assessment or fine has been rendered against a reporting entity, there is a presumption that the criteria in paragraph 7 a. and 7 b. have been met. The amount of the liability shall include the anticipated settlement amount, legal costs, insurance recoveries and other related amounts and shall take into account factors such as the nature of the litigation, progress of the case, opinions of legal counsel, and management's intended response to the litigation, claim, or assessment.

10. When condition 7 a. above is met with respect to a particular loss contingency, and the reasonable estimate of the loss is a range, which meets condition 7 b. above, an amount shall be accrued for the loss. When an amount within management’s estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be accrued. When, in management’s opinion, no amount within management’s estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management’s estimate in the range shall be accrued. For purposes of this paragraph, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management’s best estimate shall be used.

11. The use of the midpoint in a range will be applicable only in the rare instance where there is a continuous range of possible values, and no amount within that range is any more probable than any other. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine their best estimate of the liability.

Gain Contingencies

12. A gain is defined as an increase in surplus which results from peripheral or incidental transactions of a reporting entity and from all other transactions and other events and circumstances affecting the reporting entity except those that result from revenues or investments by owners. If, on or before the balance sheet date, (a) the transaction or event has been fully completed, and (b) the amount of the gain is determinable, then the transaction or event is considered a gain, and is recognized in the financial statements. The definition of a gain excludes increases in surplus that result from activities that constitute a reporting entity’s ongoing major or central operations or activities. Because investment activities are central to an insurer’s operations, increases in surplus that result from such investment activities are excluded from the definition of gains. Revenues are inflows or other enhancements of assets of a reporting entity or settlements of its liabilities (or a combination of both) from providing products, rendering services, or other activities that constitute the reporting entity’s ongoing major or
central operations. Investments by owners include any type of capital infused into the surplus of the reporting entity.

13. A gain contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (as defined in the preceding paragraph) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur (e.g., a plaintiff has filed suit for damages associated with an event occurring prior to the balance sheet, but the outcome of the suit is not known as of the balance sheet date). Gain contingencies shall not be recognized in a reporting entity’s financial statements. However, if subsequent to the balance sheet date but prior to the issuance of the financial statements, the gain contingency is realized, the gain shall be disclosed in the notes to financial statements and the unissued financial statements should not be adjusted to record the gain. A gain is generally considered realizable when noncash resources or rights are readily convertible to known amounts of cash or claims to cash.

Disclosures

14. If a loss contingency or impairment of an asset is not recorded because only one of the conditions 7 a. or 7 b. is met, or if exposure to a loss exists in excess of the amount accrued pursuant to the provisions described above, disclosure of the loss contingency or impairment of the asset shall be made in the financial statements when there is at least a reasonable possibility that a loss or an additional loss may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made.

15. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

16. Certain loss contingencies, the common characteristic of each being a guarantee, shall be disclosed in financial statements even though the possibility of loss may be remote. Examples include (a) guarantees of indebtedness of others, and (b) guarantees to repurchase receivables (or, in some cases, to repurchase related properties) that have been sold or otherwise assigned. The disclosure of those loss contingencies, and others that in substance have the same characteristics, shall be applied to statutory financial statements. The disclosure shall include the nature and amount of the guarantee. Consideration shall be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor’s right to proceed against an outside party.

17. The financial statements shall contain adequate disclosure about the nature of any gain contingency. However, care should be exercised to avoid misleading implications as to the likelihood of realization.

18. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

19. This statement adopts FASB Statement No. 5, Accounting for Contingencies (FAS 5), FASB Statement 114, Accounting by Creditors for Impairment of a Loan only as it amends in part FAS 5 and paragraphs 35 and 36 of FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements. FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5 (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement also adopts FASB Interpretation No. 34, Disclosure of Indirect Guarantees of
Indebtedness of Others, An interpretation of FASB Statement No. 5 and Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967, paragraphs 2 and 3 with the modification that AVR, IMR and Schedule F Penalty shall be shown gross. Appropriation of retained earnings discussed in paragraph 15 of FAS 5 is addressed in SSAP No. 72—Surplus and Quasi-reorganizations.

Effective Date and Transition

20. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for direct and group billed uncollected premiums, bills receivable for premiums, and amounts due from agents and brokers (collectively referred to as agents).

2. This statement does not address uncollected and deferred premiums for life considerations.

SUMMARY CONCLUSION

3. Premium transactions conducted directly with the insured result in uncollected premium balances.

4. Bills receivable, which are generally interest bearing, are used by reporting entities as a method of financing premiums.

5. Amounts due from agents result from various transactions ranging from premiums collected by the agents on behalf of the reporting entity to amounts advanced to the agent by the reporting entity to finance agency operations.

6. Uncollected premium balances, bills receivable for premiums, and amounts due from agents meet the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets, and are admitted assets to the extent they conform to the requirements of this statement. Premiums owed by agents shall be reflected net of commissions, if permitted by the contract. Balances resulting from advances to agents, which are primarily encountered in the life insurance industry, are nonadmitted if (a) the amounts are in the form of unsecured loans or advances, (b) the contractual terms for repayment are through application of future renewal commissions and/or other credits, or (c) the terms of repayment do not provide readily available cash for the satisfaction of policyholder liabilities.

Determination of Due Date

7. The due date for all premium balances addressed by this statement is determined as follows:

   a. Original and deposit premiums—governed by the effective date of the underlying contract and not the agent/reporting entity contractual relationship;

   b. Endorsement premiums—governed by the effective date of the endorsement;

   c. Installment premiums—governed by the contractual due date of the installment;

   d. Audit premiums and retrospective premiums—governed by policy or contract provisions. If the due date for receivables relating to these policies is not addressed by policy provisions or contract provisions, any uncollected audit premium (either accrued or billed) is nonadmitted.

8. The provisions of paragraph 7 shall be applied to all balances due except those arising from force placed insurance obtained by a lender for collateral protection, certain policies, known as Trustee Sales Guarantees (TSGs), issued by title insurance companies to lenders on defaulted real estate loans and crop/hail policies. For force placed insurance policies, the due date for purposes of applying paragraph
SSAP No. 6
Statement of Statutory Accounting Principles

9 shall be the date of billing. For TSGs, the due date for purposes of applying paragraph 9 shall be the expiration of the grace period given to the defaulted debtor, which is provided by statute. Crop/hail premiums are considered installment premiums in accordance with paragraph 7 and accordingly, the due date for purposes of applying paragraph 9 shall be governed by the contractual due date of the installment.

Impairment

9. Nonadmitted amounts are determined as follows:

a. Uncollected Premium—To the extent that there is no related unearned premium, any uncollected premium balances which are over ninety days due shall be nonadmitted. If an installment premium is over ninety days due, the amount over ninety days due plus all future installments that have been recorded on that policy shall be nonadmitted;

b. Bills Receivable—Bills receivable shall be nonadmitted if either of the following conditions are present:

i. If any installment is past due, the entire bills receivable balance from that policy is nonadmitted; or

ii. If the bills receivable balance due exceeds the unearned premium on the policy for which the note was accepted, the amount in excess of the unearned premium is nonadmitted.

c. Agents’ Balances—The uncollected agent’s receivable on a policy by policy basis which is over ninety days due shall be nonadmitted regardless of any unearned premium;

i. If amounts are both payable to and receivable from an agent on the same underlying policy, and the contractual agreements between the agent and the reporting entity permit offsetting, the nonadmitted portion of amounts due from that agent shall not be greater than the net balance due, by agent;

ii. If reconciling items between a reporting entity’s account and an agent’s account are over ninety days due, the amounts shall be nonadmitted.

10. After calculation of nonadmitted amounts, an evaluation shall be made of the remaining admitted assets in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5), to determine if there is impairment. If, in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible a portion of the balance is uncollectible and is therefore not written off, disclosure requirements outlined in SSAP No. 5 shall be followed.

11. Amounts classified as nonadmitted assets collected subsequent to the date of the statutory financial statements shall not be used to adjust the nonadmitted asset otherwise calculated.

Wash Transactions

12. Amounts due from agents (affiliated or nonaffiliated) that are collected prior to the date of the financial statements and then repaid to the agent by the reporting entity or one of the reporting entity’s affiliates subsequent to the date of the financial statements shall be accounted for in accordance with the substance of the transaction (a wash transaction) and not its form. Accordingly, the payments received
shall be accounted for as deposits and a liability shall be established for the same amount. The amounts due shall be reestablished as an asset and subjected to asset collectibility and nonadmitted asset calculations using the original due date of the receivable.

13. Short-term financing by third parties shall also be considered a wash transaction if the substance of the transaction is to avoid the nonadmitted asset principle set forth in this statement.

Disclosures

14. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for an asset valuation reserve (AVR) and an interest maintenance reserve (IMR) for life and accident and health insurance companies, excluding separate accounts. Separate account AVR/IMR reporting is addressed in SSAP No. 56—Separate Accounts.

SUMMARY CONCLUSION

2. Life and accident and health insurance companies shall recognize liabilities for an AVR and an IMR. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR defers recognition of the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the liability released.

3. The IMR and AVR shall be calculated and reported in accordance with the NAIC Annual Statement Instructions for Life and Accident and Health Insurance Companies.

Effective Date and Transition

4. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

RELEVANT ISSUE PAPERS
SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for employers’ pension obligations.

SUMMARY CONCLUSION

Defined Benefit Plans

2. A defined benefit plan defines the amount of the pension benefit that will be provided to the plan participant at retirement or termination. For such benefit plans, reporting entities shall adopt FASB Statement No. 87, Employers’ Accounting for Pensions (FAS 87) with a modification to exclude nonvested employees. Therefore, the cost related to services rendered prior to becoming eligible and vested in the plan are recognized as a component of the net periodic pension cost in the period the employee becomes vested. Any intangible asset or prepaid expense resulting from adoption of the provisions of this statement shall be considered a nonadmitted asset, as such an asset cannot be readily converted to cash to satisfy policyholder obligations.

3. If a reporting entity settles or curtails a defined benefit plan, the reporting entity shall immediately recognize all previously unrecognized amounts as discussed below.

4. A settlement is a transaction which is irrevocable and releases the employer from responsibility for the pension obligation by eliminating the risks relative to the obligation and the assets associated with the plan (e.g., making lump-sum cash payments to plan participants in exchange for their rights to receive specified pension benefits or purchasing nonparticipating annuity contracts to cover vested benefits). If a settlement occurs and the net result is a loss, such loss is recognized at the time of the settlement. If the net result is a gain, such gain is not recognized until the proceeds are received by the reporting entity. When such gains are recognized, any excise tax surcharges shall also be recognized.

5. A curtailment is an event which significantly alters the make up of the pension plan (e.g., a reduction in the years of service required or the employees covered). If a curtailment occurs, there are generally two components to any gain or loss. Any unrecognized prior service cost shall be recognized as a loss. An increase or decrease in pension benefit obligations due to the curtailment will also result in a gain or loss, and is combined with the prior service cost loss. If the net result of the curtailment is a loss, such loss shall be recognized when it is probable that the curtailment will occur and that the effects can be reasonably estimated. If the net result is a gain, such gain shall not be recognized in earnings until the employees terminate or the plan suspension or amendment is adopted and the proceeds are received by the reporting entity. When such gains are recognized, any excise tax surcharges shall also be recognized.

Defined Contribution Plans

6. A defined contribution plan defines the amount of the employer’s contributions to the plan and its allocation to plan participants. The pension benefit provided to the plan participant at retirement or termination depends on the amount of employer and employee contributions, earnings on plan investments and, in some plans, other participant forfeitures.

7. For defined contribution plans, the reporting entity shall expense contributions required by the plan over the period in which the employee vests in those contributions. Contributions to plan participants’ accounts made prior to vesting shall be treated as prepaid expenses, and shall be nonadmitted. Contributions required after participants terminate or retire shall be accrued and an expense
shall be recorded over the working lives of the participants beginning at the date the participant initially vests in plan contributions.

8. Certain defined contribution plans may define the employer’s contribution as a percentage of the plan participants' individual compensation rather than as a specific dollar amount which is allocated among the plan participants. If an employer’s contributions to a defined contribution plan are in excess of those required under the plan and required to be allocated to individual participants, such amounts are recorded as a prepaid expense and nonadmitted under statutory accounting principles.

Disclosures

9. The disclosures required by paragraph 54 of FAS 87 shall be included in the statutory financial statements considering the modification in this statement to include only vested employees.

10. The disclosures required by paragraph 17 of FASB Statement No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits (FAS 88) shall be made when an employer recognizes a gain or loss related to a settlement or curtailment of a defined benefit plan or when providing termination benefits.

11. Refer to the preamble for further discussion regarding disclosure requirements.

Consolidated/Holding Company Plans

12. The employees of many reporting entities are members of a plan sponsored by a parent company or holding company. A reporting entity who participates in these plans and is not directly liable for obligations under the plan shall recognize pension expense equal to its allocation from the holding company or parent company of the required contribution to the plan for the period. A liability shall be established for any such contributions due and unpaid.

13. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for obligations under the plan, then the requirements outlined in paragraphs 2 to 11 and 14 to 20 of this statement shall be applied.

Relevant Literature

14. The conclusions in paragraphs 2 to 11 and 15 to 20 adopt FAS 87 and FAS 88, with the following modifications:

   a. Calculation of the pension obligation shall exclude non-vested employees. Partially vested employees are included only to the extent of their vested amounts;

   b. Any asset which results from an excess of the fair value of plan assets over the pension obligation shall be recorded as a nonadmitted asset;

   c. At the date of adoption of this accounting principle, the pension obligation or asset not previously recognized related to vested employees may be recorded immediately or may be amortized over future periods;

   d. A net gain (net of excise tax surcharge) resulting from the settlement or curtailment of a pension plan is not recognized until the proceeds are received by the reporting entity.
15. This statement also adopts FASB Emerging Issues Task Force No. 88-1, Determination of Vested Benefit Obligation for a Defined Benefit Pension Plan, FASB Emerging Issues Task Force No. 90-3, Accounting for Employers' Obligations for Future Contributions to a Multiemployer Pension Plan, FASB Emerging Issues Task Force No. 91-7, Accounting for Pension Benefits Paid by Employers after Insurance Companies Fail to Provide Annuity Benefits, and FASB Emerging Issues Task Force No. 96-5, Recognition of Liabilities for Contractual Termination Benefits or Changing Benefit Plan Assumptions in Anticipation of a Business Combination.

Effective Date and Transition

16. This statement is effective for years beginning January 1, 2001.

17. As of January 1, 2001, the transition obligation or asset shall be determined as the difference between the projected benefit obligation for vested employees and the fair value of plan assets. If prior to the effective date of Codification, the reporting entity has adopted FAS 87 for statutory accounting purposes, the transition obligation or asset calculated above shall be compared to those amounts previously recorded under FAS 87. The difference between these amounts represents an incremental asset or liability. If the reporting entity has not previously adopted FAS 87 for statutory accounting purposes, the entire transition asset or obligation represents the incremental asset or liability.

18. As of January 1, 2001, if the reporting entity calculates an incremental liability, this liability shall be recognized according to one of the two following methods:

   a. The reporting entity may elect to record the entire incremental liability as a direct charge to surplus;

   b. Alternatively, the reporting entity may elect to amortize the incremental liability as a component of net periodic pension cost over a period not to exceed 20 years.

19. As of January 1, 2001, if the reporting entity calculates an incremental asset, this asset shall be recognized according to one of the two following methods:

   a. The reporting entity may elect to record the entire incremental asset as a direct credit to surplus;

   b. Alternatively, the reporting entity may elect to accrue the incremental asset as a component of net periodic pension cost in an amount each period such that total net periodic pension cost may be reduced to an amount not less than zero (i.e., the accrual of the incremental asset may be used to offset current period net periodic pension cost).

20. An incremental asset resulting from a transition obligation that is less than an amount previously recorded under FAS 87 should first reduce the recorded liability. Any remaining incremental asset shall be reported as nonadmitted.

Subsequent Events

SCOPE OF STATEMENT

1. This statement defines subsequent events and establishes the criteria for recording such events in the financial statements and/or disclosing them in the notes to the financial statements. The conclusions in this statement apply to both quarterly and annual statement filings.

SUMMARY CONCLUSION

2. Subsequent events shall be defined as events or transactions that occur subsequent to the balance sheet date, but prior to the issuance of the statutory financial statements. The issuance of the statutory financial statements includes not only the submission of the Quarterly and Annual Statement but also the issuance of the audit opinion by the reporting entity's certified public accountant.

3. Material subsequent events shall be considered either:
   a. Type I. Events that provide additional evidence with respect to conditions that existed at the date of the balance sheet and affect the estimates inherent in the process of preparing financial statements;
   b. Type II. Events that provide evidence with respect to conditions that did not exist at the balance sheet date but arose subsequent to that date.

4. All information that becomes available prior to the issuance of the financial statements relating to a material Type I subsequent event shall be used by management to determine a related accounting estimate (see SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5—Liabilities, Contingencies and Impairments of Assets). Any changes in estimates resulting from the use of such evidence shall be recorded in the financial statements unless specifically prohibited, (e.g., subsequent collection of agents balances over 90 days due when determining nonadmitted agents balances as prohibited by SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers).

5. For material Type I subsequent events, the nature and the amount of the adjustment shall be disclosed in the notes to the financial statements only if necessary to keep the financial statements from being misleading.

6. Information that becomes available prior to the issuance of the financial statements relating to a material Type II subsequent event shall not be recorded in the financial statements, but shall be disclosed in the notes to the financial statements. If an event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclosure of supplemental pro forma financial data shall be made including the impact on net income, surplus, total assets, and total liabilities giving effect to the event as if it had occurred on the date of the balance sheet.

7. Identifying events that require adjustment of the financial statements under the criteria stated in the conclusion calls for the management of the entity to exercise judgment and accumulate knowledge of the facts and circumstances surrounding the event. For example, a loss on an uncollectible agent's balance as a result of an agent's deteriorating financial condition leading to bankruptcy subsequent to the balance sheet date would be indicative of conditions existing at the balance sheet date, thereby requiring the recording of such event to the financial statements before their issuance. On the other hand, a similar loss resulting from an agent's major casualty loss such as a fire or flood subsequent to the balance sheet date would not be indicative of conditions existing at the balance sheet date and recording of the event to
the financial statements would not be appropriate. However, this is a Type II subsequent event which would require disclosure in the notes to the financial statements.

8. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

9. The above guidance is consistent with the AICPA Statement on Auditing Standards No. 1, Section 560, Subsequent Events, which should be considered when applying the provisions of this SSAP.

Effective Date and Transition

10. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Income Taxes

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for current and deferred federal and foreign income taxes and current state income taxes.

SUMMARY CONCLUSION

2. For purposes of accounting for federal and foreign income taxes, reporting entities shall adopt FASB Statement No. 109, Accounting for Income Taxes (FAS 109) with modifications for state income taxes, the realization criteria for deferred tax assets, and the recording of the impact of changes in its deferred tax balances. As a result, financial statements will recognize current and deferred income tax assets and liabilities in accordance with the provisions of this statement.

Current Income Taxes

3. “Income taxes incurred” shall include current income taxes, the amount of federal and foreign income taxes paid (recovered) or payable (recoverable) for the current year. Current income taxes are defined as:

   a. Current year estimates of federal and foreign income taxes (including the equity tax of a mutual life insurer and the “true-up” of such tax), based on tax returns for the current year, and tax contingencies for current and all prior years, to the extent not previously provided, computed in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5);

   b. Amounts incurred or received during the current year relating to prior periods, to the extent not previously provided, as such amounts are deemed to be changes in accounting estimates as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

4. State income taxes (including franchise taxes) shall be computed in accordance with SSAP No. 5 and shall be limited to (a) taxes due as a result of the current year’s taxable income calculated in accordance with state laws and regulations and (b) amounts incurred or received during the current year relating to prior periods, to the extent not previously provided as such amounts are deemed to be changes in accounting estimates. Property and casualty insurance companies shall report state income taxes as other underwriting expenses under the caption “Taxes, licenses, and fees.” Life and accident and health insurance companies shall report such amounts as general expenses under the caption “Insurance taxes, licenses, and fees, excluding federal income taxes.” Other health entities shall report such amounts as general administration expenses under the caption “Taxes, licenses, and fees.”

Deferred Income Taxes

5. A reporting entity’s balance sheet shall include deferred income tax assets (DTAs) and liabilities (DTLs), the expected future tax consequences of temporary differences generated by statutory accounting, as defined in paragraph 11 of FAS 109.

6. A reporting entity’s deferred tax assets and liabilities are computed as follows:

   a. Temporary differences are identified and measured using a “balance sheet” approach whereby statutory and tax basis balance sheets are compared;
b. Temporary differences include unrealized gains and losses and nonadmitted assets but
do not include asset valuation reserve (AVR), interest maintenance reserve (IMR),
Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts
attributable to its statutory contingency reserve to the extent that “tax and loss” bonds
have been purchased;

c. Total DTAs and DTLs are computed using enacted tax rates; and

d. A DTL is not recognized for amounts described in paragraph 31 of FAS 109.

7. Changes in DTAs and DTLs, including changes attributable to changes in tax rates and changes
in tax status, if any, shall be recognized as a separate component of gains and losses in unassigned funds
(surplus).

**Admissibility of Income Tax Assets**

8. Current income tax recoverables shall include all current income taxes, including interest,
reasonably expected to be recovered in a subsequent accounting period, whether or not a return or claim
has been filed with the taxing authorities. Current income tax recoverables are reasonably expected to be
recovered if the refund is attributable to overpayment of estimated tax payments, errors, carrybacks, as
defined in paragraph 289 of FAS 109, or items for which the reporting entity has substantial authority, as
that term is defined in Federal Income Tax Regulations.

9. Current income tax recoverables meet the definition of assets as specified in SSAP No. 4—Assets
and Nonadmitted Assets, and are admitted assets to the extent they conform to the requirements of this
statement.

10. Gross DTAs shall be admitted in an amount equal to the sum of:

   a. Federal income taxes paid in prior years that can be recovered through loss carrybacks
      for existing temporary differences that reverse by the end of the subsequent calendar
      year;

   b. The lesser of:

      i. The amount of gross DTAs, after the application of paragraph 10 a., expected to
         be realized within one year of the balance sheet date; or

      ii. Ten percent of statutory capital and surplus as required to be shown on the
          statutory balance sheet of the reporting entity for its most recently filed
          statement with the domiciliary state commissioner adjusted to exclude any net
          DTAs, EDP equipment and operating system software and any net positive
          goodwill; and

   c. The amount of gross DTAs, after application of paragraphs 10 a. and 10 b., that can be
      offset against existing gross DTLs.

11. In computing a reporting entity’s gross DTA pursuant to paragraph 10;

   a. Existing temporary differences that reverse by the end of the subsequent calendar year
      shall be determined in accordance with paragraphs 228 and 229 of FAS 109;
b. In determining the amount of federal income taxes that can be recovered through loss carrybacks, the amount and character (i.e., ordinary versus capital) of the loss carrybacks and the impact, if any, of the Alternative Minimum Tax shall be determined in accordance with the provisions of the Internal Revenue Code, and regulations thereunder;

c. The amount of carryback potential that may be considered in calculating the gross DTAs of a reporting entity in subparagraph 10 a. above, that files a consolidated income tax return with one or more affiliates, may not exceed the amount that the reporting entity could reasonably expect to have refunded by its parent; and

d. The phrases “reverse by the end of the subsequent calendar year” and “realized within one year of the balance sheet date” are intended to accommodate interim reporting dates and reporting entities that file on an other than calendar year basis for federal income tax purposes.

Intercompany Income Tax Transactions

12. In the case of a reporting entity that files a consolidated income tax return with one or more affiliates, income tax transactions (including payment of tax contingencies to its parent) between the affiliated parties shall be recognized if:

a. Such transactions are economic transactions as defined in SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties (SSAP No. 25);

b. Are pursuant to a written income tax allocation agreement; and

c. Income taxes incurred are accounted for in a manner consistent with the principles of FAS 109, as modified by this statement.

13. Amounts owed to a reporting entity pursuant to a recognized transaction shall be treated as a loan or advance, and nonadmitted, pursuant to SSAP No. 25, to the extent that the recoverable is not settled within 90 days of the filing of a consolidated income tax return, or where a refund is due the reporting entity’s parent, within 90 days of the receipt of such refund.

Intraperiod Tax Allocation

14. In accordance with paragraph 35 of FAS 109, a reporting entity’s unrealized gains and losses shall be recorded net of any allocated DTA or DTL. The amount allocated shall be computed in a manner consistent with paragraph 38 of FAS 109.

15. Income taxes incurred shall be allocated to net income and realized capital gains or losses in a manner consistent with paragraph 38 of FAS 109. Furthermore, income taxes incurred or received during the current year attributable to prior years shall be allocated, to the extent not previously provided, to net income in accordance with SSAP No. 3 unless attributable, in whole or in part, to realized capital gains or losses, in which case, such amounts shall be apportioned between net income and realized capital gains and losses, as appropriate.
Interim Periods

16. Income taxes incurred in interim periods shall be computed using an estimated annual effective current tax rate for the annual period in accordance with the methodology described in paragraphs 19 and 20 of Accounting Principles Board Opinion No. 28, Interim Financial Reporting. Estimates of the annual effective tax rate at the end of interim periods are, of necessity, based on estimates and are subject to subsequent refinement or revision. If a reliable estimate cannot be made, the actual effective tax rate for the year-to-date may be the best estimate of the annual effective tax rate. If a reporting entity is unable to estimate a part of its "ordinary" income (or loss) or the related tax (or benefit) but is otherwise able to make a reliable estimate, the tax (or benefit) applicable to the item that cannot be estimated shall be reported in the interim period in which the item is reported.

Disclosures

17. Statutory financial statement disclosure shall be made in a manner consistent with the provisions of paragraphs 43—45 and 48 of FAS 109. However, required disclosures with regard to a reporting entity’s valuation allowance shall be replaced with disclosures relating to the nonadmittance of some portion or all of a reporting entity’s DTAs. The financial statements shall include the disclosures required by paragraph 47 of FAS 109 for non-public companies. Paragraphs 18 to 23 describe the disclosure requirements as modified for the difference between the requirements of FAS 109 and those prescribed by this statement.

18. The components of the net DTA or DTL recognized in a reporting entity’s balance sheet shall be disclosed as follows:

a. The total of all DTAs (admitted and nonadmitted);

b. The total of all DTLs;

c. The total DTAs nonadmitted as the result of the application of paragraph 10; and

d. The net change during the year in the total DTAs nonadmitted.

19. To the extent that DTLs are not recognized for amounts described in paragraph 31 of FAS 109, the following shall be disclosed:

a. A description of the types of temporary differences for which a DTL has not been recognized and the types of events that would cause those temporary differences to become taxable;

b. The cumulative amount of each type of temporary difference;

c. The amount of the unrecognized DTL for temporary differences related to investments in foreign subsidiaries and foreign corporate joint ventures that are essentially permanent in duration if determination of that liability is practicable or a statement that determination is not practicable; and

d. The amount of the DTL for temporary differences other than those in item c. above that is not recognized in accordance with the provisions of paragraphs 31 of FAS 109.

20. The significant components of income taxes incurred (i.e., current income tax expense) and the changes in DTAs and DTLs shall be disclosed. Those components would include, for example:
a. Current tax expense or benefit;
b. The change in DTAs and DTLs (exclusive of the effects of other components listed below);
c. Investment tax credits;
d. The benefits of operating loss carryforwards; and

e. Adjustments of a DTA or DTL for enacted changes in tax laws or rates or a change in the tax status of the reporting entity.

21. Additionally, to the extent that the sum of a reporting entity’s income taxes incurred and the change in its DTAs and DTLs is different from the result obtained by applying the federal statutory rate to its pretax net income, a reporting entity shall disclose the nature of the significant reconciling items.

22. A reporting entity shall also disclose the following:

a. The amounts, origination dates and expiration dates of operating loss and tax credit carryforwards available for tax purposes; and

b. The amount of federal income taxes incurred in the current year and each preceding year, which are available for recoupment in the event of future net losses.

23. If a reporting entity’s federal income tax return is consolidated with those of any other entity or entities, the following shall be disclosed:

a. A list of names of the entities with whom the reporting entity’s federal income tax return is consolidated for the current year; and

b. The substance of the written agreement, approved by the reporting entity’s Board of Directors, which sets forth the manner in which the total combined federal income tax for all entities is allocated to each entity which is a party to the consolidation. (If no written agreement has been executed, give an explanation of why such an agreement has not been executed.) Additionally, the disclosure shall include the manner in which the entity has an enforceable right to recoup federal income taxes in the event of future net losses which it may incur or to recoup its net losses carried forward as an offset to future net income subject to federal income taxes.

24. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

25. This statement adopts the provisions of FAS 109 except as modified in paragraph 2 of this statement which results in paragraphs 29—30, 36—37, 39, 41—42, 46, and 49—59 of FAS 109 being rejected, inasmuch as they are not applicable to reporting entities subject to this statement or are inconsistent with other statutory accounting principles. Paragraph 47 of FAS 109 is adopted with modification to provide for the disclosures required for non public reporting entities.

26. This statement rejects FASB Interpretation No. 18, Accounting for Income Taxes in Interim Periods...an interpretation of APB Opinion No. 28.
27. The following lists Accounting Principles Board Opinions that are adopted or rejected by this statement:

   a. *Accounting Principles Board Opinion No. 2, Accounting for the "Investment Credit,"* paragraphs 9–15 are adopted with modification to utilize the cost reduction method only and rejects all other paragraphs;

   b. *Accounting Principles Board Opinion No. 4 (Amending No. 2), Accounting for the "Investment Credit,"* is rejected in its entirety;

   c. *Accounting Principles Board Opinion No. 10, Omnibus Opinion—1966,* paragraph 6 is adopted;

   d. *Accounting Principles Board Opinion No. 23, Accounting for Income Taxes—Special Areas,* paragraphs 1–3, 5–9, 12–13, and 15–18 are adopted, and paragraphs 19–25, and 31–33 are rejected;

   e. *Accounting Principles Board Opinion No. 28, Interim Financial Reporting,* paragraphs 19 and 20 are adopted and all other paragraphs rejected;

28. The following lists FASB Technical Bulletins that are adopted or rejected by this statement:

   a. *FASB Technical Bulletin No. 79-9, Accounting in Interim Periods for Changes in Income Tax Rates* is rejected in its entirety;

   b. *FASB Technical Bulletin No. 82-1, Disclosure of the Sale or Purchase of Tax Benefits through Tax Leases* is adopted in its entirety.

29. The following lists FASB Emerging Issues Task Force Issues that are adopted or rejected by this statement:

Postemployment Benefits and Compensated Absences

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for postemployment benefits and for compensated absences.

SUMMARY CONCLUSION

2. Postemployment benefits are all types of benefits provided by an employer to former or inactive employees or agents, their beneficiaries, and covered dependents, after employment but before retirement. Those benefits include, but are not limited to, salary continuation, supplemental unemployment benefits, severance benefits, disability-related benefits (including workers' compensation), job training and counseling, and continuation of benefits such as health care benefits and life insurance coverage. Compensated absences include, but are not limited to, benefits such as vacation, sick pay, and holidays.

3. A reporting entity shall accrue a liability for postemployment benefits and for employees' compensation for future absences if all of the following conditions are met:
   a. The reporting entity's obligation relating to compensated absences and postemployment benefits is attributable to employees' services already rendered;
   b. The obligation relates to rights that vest\(^1\) or accumulate\(^2\);
   c. Payment is probable; and
   d. The amount can be reasonably estimated.

4. In the unlikely situation in which a reporting entity does not accrue a liability in accordance with paragraph 3 only because the amount cannot be reasonably estimated (i.e., condition d. is not met), that fact and the reasons therefore shall be disclosed in the financial statements.

5. A reporting entity shall accrue a liability for employees' compensated absences and postemployment benefits reimbursable under service agreements with an affiliate, if all of the conditions of paragraph 3 are met.

6. Postemployment benefits provided to employees or agents in connection with their termination can include special termination benefits and contractual termination benefits. Special termination benefits are defined as those that are offered only for a short period of time; contractual termination benefits are defined as those required by the terms of a plan only if a specified event, such as a facility closing, occurs. An employer that offers special termination benefits to employees or agents shall recognize a liability and an expense when the employees or agents accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and an expense when it is probable that employees or agents will be entitled to benefits and the

---

\(^1\) In this statement, vested rights are those for which the reporting entity has an obligation to make payment even if an employee terminates; thus, they are not contingent on an employee's future service.

\(^2\) For purposes of this statement, accumulate means that earned but unused rights to compensated absences may be carried forward to one or more periods subsequent to that in which they are earned, even though there may be a limit to the amount that can be carried forward.
amount can be reasonably estimated. The cost of such termination benefits shall include the amount of any lump-sum payments and the present value of any expected future payments.

7. An employer is not required to accrue a liability for nonvesting accumulating rights for compensated absences if the right to receive those benefits is contingent upon future events and continued employment.

Consolidated/Holding Company Plans

8. The employees of many reporting entities are eligible for certain compensated absence and postemployment benefits granted by a parent company or holding company. An entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation from the parent company or holding company of the benefits earned during the period. A liability shall be established for any such amounts due, but not yet paid.

9. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for the benefits, then the requirements outlined above in paragraphs 2 - 7 shall be applied.

Disclosures

10. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

11. This statement adopts FASB Statement No. 43, Accounting for Compensated Absences (FAS 43). This statement also adopts FASB Statement No. 112, Employers’ Accounting for Postemployment Benefits: an amendment of FASB Statements No. 5 and 43, and the provisions of FASB Statement No. 88, Employers’ Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits, that address termination benefits.

Effective Date and Transition

12. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Employee Stock Ownership Plans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the plan sponsors’ accounting for Employee Stock Ownership Plans (ESOPs).

SUMMARY CONCLUSION

2. An ESOP is an employee benefit plan that is described by the Employee Retirement Income Security Act of 1974 (ERISA) and the Internal Revenue Code of 1986 as a stock bonus plan, or a combination stock bonus and money purchase pension plan, designed to invest primarily in employer stock. For such plans, reporting entities shall adopt AICPA Statement of Position 93-6, Employers’ Accounting for Employee Stock Ownership Plans (SOP 93-6) except that debt obligations of ESOPs shall be reported consistent with SSAP No. 15—Debt and Holding Company Obligations, and the related income tax effects shall be accounted for consistent with SSAP No. 10—Income Taxes (SSAP No. 10), as further clarified in this statement. There are two basic forms of ESOPs: nonleveraged and leveraged. A summary of the financial reporting for each is provided below.

Leveraged ESOPs

3. A leveraged ESOP borrows money to acquire shares of the employer company (sponsor). The money may be borrowed from the plan sponsor or from an outside lender, with or without a guarantee from the plan sponsor. The debt usually is collateralized by the employer’s shares. Debt obligations of an ESOP shall be reported as borrowed money by company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company or the sale or exchange of the company’s securities.

4. The sponsor shall record the issuance of shares or the sale of treasury shares to an ESOP when it occurs. The consideration recorded for the stock issued is unearned compensation and the unearned ESOP shares shall be recorded as a separate reduction of unassigned funds (surplus).

5. The unearned shares initially held by the ESOP in a suspense account are called suspense or unallocated shares. As the debt is repaid (generally from employer contributions and dividends on the employer’s stock), suspense shares are released and must be allocated to individual accounts as of the end of the ESOP’s fiscal year. As ESOP shares are committed to be released, unearned ESOP shares shall be credited and, depending on the purpose for which the shares are released, either (a) compensation cost, (b) dividends payable, or (c) compensation liabilities shall be charged consistent with SOP 93-6.

6. Because employers control the use of dividends on unallocated shares, dividends on unallocated shares are not considered dividends for financial reporting purposes (although such dividends are generally subject to normal dividend requirements under state statutes or regulations). Dividends on unallocated shares used to pay debt service shall be reported as a reduction of debt or of accrued interest payable. Dividends on unallocated shares paid to participants or added to participant accounts shall be reported as compensation cost. Dividends on allocated shares shall be charged to unassigned funds (surplus).

7. If the ESOP sells the suspense shares and uses the proceeds to repay the debt, the employer shall report the release of the suspense shares as a credit to unearned ESOP shares based on the cost of the shares to the ESOP, charge debt and accrued interest payable, and recognize the difference in paid-in capital. However, if there is a difference between the amount paid to an outside lender and the net
carrying amount of the debt, such difference shall be reported as a capital gain or loss on extinguishment of debt and, accordingly, shall be charged to operations and disclosed in the financial statements with other disclosures required by paragraph 17.

8. If an employer reacquires the suspense shares from the ESOP, the purchase of the shares shall be accounted for as a treasury stock transaction consistent with SOP 93-6.

Nonleveraged ESOPs

9. Employers with nonleveraged ESOPs shall report compensation cost equal to the contribution called for in the period under the plan.

10. Employers with nonleveraged ESOPs shall charge dividends on shares held by the ESOPs to unassigned funds (surplus), except that dividends on suspense account shares of pension reversion ESOPs shall be accounted for the same way as dividends on suspense account shares of leveraged ESOPs.

Pension Reversion ESOPs

11. Pension reversion ESOPs are created by transferring the assets of a defined benefit pension plan to existing or newly created ESOPs and may be leveraged or nonleveraged. Pension reversion ESOPs shall be accounted for consistent with SOP 93-6.

Issues Related to Accounting for Income Taxes

Leveraged ESOPs

12. The amount of ESOP-related expense for a leveraged ESOP for a period may differ from the amount of the ESOP-related income tax deduction (prescribed by income tax rules and regulations) for that period. Such differences shall be reported in accordance with SSAP No. 10.

13. If the cost of shares committed to be released is greater than their fair value, the employer shall credit the tax effect of the amount by which the deductible expense exceeds the book expense to unassigned funds. Conversely, if the cost of shares committed to be released is less than their fair value, the employer shall charge the tax effect of the amount by which the book expense exceeds the deductible expense to unassigned funds. Such amounts shall be limited to the amount of previous credits to unassigned funds related to cost exceeding fair value of ESOP shares committed to be released in previous periods.

14. The tax benefit of tax-deductible dividends on allocated ESOP shares shall be recorded as a reduction of income tax expense.

Nonleveraged ESOPs

15. Reporting entities with nonleveraged ESOPs may accrue compensation cost for financial reporting purposes earlier than the cost is deductible for income tax purposes. Accruing the compensation cost earlier for financial reporting purposes creates a temporary difference that shall be accounted for in accordance with SSAP No. 10.

Other

16. Under federal income tax regulations, employer securities (such as convertible preferred stock) that are held by participants in an ESOP and are not readily tradable on an established market
include a put option. Securities subject to such repurchase obligations shall be reported as outstanding
and as a component of capital stock and/or gross paid-in and contributed surplus in accordance with
SSAP No. 72—Surplus and Quasi-reorganizations.

Disclosures

17. An employer sponsoring an ESOP shall disclose the following information about the plan, if applicable:
   a. A description of the plan, the basis for determining contributions, including the
      employee groups covered, and the nature and effect of significant matters affecting
      comparability of information for all periods presented. For leveraged ESOPs and pension
      reversion ESOPs, the description shall include the basis for releasing shares and how
      dividends on allocated and unallocated shares are used;
   b. A description of the accounting policies followed for ESOP transactions, including the
      method of measuring compensation and the classification of dividends on ESOP shares;
   c. The amount of compensation cost recognized during the period;
   d. The number of allocated shares, committed-to-be-released shares, and suspense shares
      held by the ESOP at the balance sheet date;
   e. The fair value of unearned ESOP shares at the balance sheet date; and
   f. The existence and nature of any repurchase obligation, including disclosure of the fair
      value of the shares allocated as of the balance sheet date, which are subject to a
      repurchase obligation.

18. Refer to the preamble for further discussions regarding disclosure requirements. The disclosures
    in paragraph 17 above shall be included in the annual audited statutory financial reports only.

Relevant Literature

19. This statement adopts SOP 93-6 with a modification to reject paragraphs 13 and 25 to the extent
    they require reporting all debt obligations of an ESOP as liabilities, paragraphs 28 through 34, 44, and
    53 b. as they relate to earnings per share, and paragraph 37 as it relates to reporting gains and losses on
    extinguishment of debt.

20. This statement rejects FASB Emerging Issues Task Force No. 89-11, Sponsor’s Balance Sheet
    Classification of Capital Stock with a Put Option Held by an Employee Stock Ownership Plan.

Effective Date and Transition

21. This statement is effective for years beginning January 1, 2001. A change resulting from the
    adoption of this statement shall be accounted for as a change in accounting principle in accordance with
    SSAP No. 3—Accounting Changes and Corrections of Errors.

Stock Options and Stock Purchase Plans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for employee stock options and stock purchase plans.

SUMMARY CONCLUSION

2. A stock purchase or stock option plan is any arrangement to issue stock to officers and employees, as a group or individually. A plan shall be classified as either noncompensatory or compensatory.

Noncompensatory Plans

3. A reporting entity recognizes no compensation expense for services received in return for stock issued through noncompensatory plans. The following four characteristics are essential in a noncompensatory plan:

   a. Substantially all full-time employees meeting limited employment qualifications may participate (employees owning a specified percent of the outstanding stock and executives may be excluded);
   
   b. Stock is offered to eligible employees equally or based on a uniform percentage of salary or wages (the plan may limit the number of shares of stock an employee may purchase through the plan);
   
   c. The time permitted for exercise of an option or purchase right is limited to a reasonable period; and
   
   d. The discount from the market price of the stock is no greater than would be reasonable in an offer of stock to stockholders or others.

Compensatory Plans

4. Stock purchase and stock option plans which do not meet the criteria of a noncompensatory plan shall be classified as compensatory.

5. Consideration that a reporting entity receives for stock issued through employee stock option, purchase, and award plans in the form of services shall be measured by the fair value of the stock at the measurement date less the amount, if any, that the employee is required to pay.

6. The measurement date for determining compensation cost in stock option, purchase, and award plans is the first date on which are known both (a) the number of shares that an individual employee is entitled to receive and (b) the option or purchase price, if any. That date for many or most plans is the date an option or purchase right is granted or stock is awarded to an individual employee. However, the measurement date may be later than the date of grant or award in plans with variable terms that depend on events after the date of grant or award. Thus, a reporting entity recognizes compensation cost for stock issued through compensatory plans unless the employee pays an amount that is at least equal to the quoted market price of the stock at the measurement date.
7. Compensation cost in stock option, purchase, and award plans shall be recognized as an expense of one or more periods in which an employee performs services and also as part or all of the consideration received for stock issued to the employee through a plan. The grant or award may specify the period or periods during which the employee performs services, or the period or periods may be inferred from the terms or from the past pattern of grants or awards. An employee may perform services in several periods before a reporting entity issues stock for those services. The reporting entity shall accrue compensation expense in each period in which the services are performed. If the measurement date is later than the date of grant or award, a reporting entity shall record the compensation expense each period from date of grant or award to date of measurement based on the fair value of the stock at the end of each period.

8. Quoted market prices in active markets are the best evidence of fair value and shall be used as fair value, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances.

9. If stock is issued in a plan before some or all of the services are performed, part of the consideration recorded for the stock issued is unearned compensation and shall be reported as a component of unassigned funds (surplus). The unearned compensation shall be accounted for as expense of the period or periods in which the employee performs service.

Accounting for Income Tax Benefits

10. A reporting entity may obtain an income tax benefit related to stock issued to an employee through a stock option, purchase, or award plan. Generally, the reporting entity is entitled to a deduction for income tax purposes of the amount that an employee reports as ordinary income, and the deduction is allowable to the corporation in the year in which the amount is includable in the gross income of the employee. Thus, the amount and timing of the deduction for income tax purposes, if any, may differ from the related compensation expense recognized in the financial statements. For example, the reporting entity may be entitled to a deduction for income tax purposes even though no compensation expense is recognized in measuring net income.

11. The income tax reduction, if any, related to a stock option, purchase, or award plan shall be accounted for within one or more of the following three components:

   a. Income tax expense for a period shall be reduced by no more than the income tax reduction related to the stock option, purchase, or award plan that is proportionate to compensation expense recognized during the period, for such plan;

   b. Compensation expense that is deductible in the income tax return for a period different from the one in which such expense is reported in measuring net income results in a temporary difference. Deferred income taxes shall be recognized for such differences and included with all deferred income taxes as a separate component of gains and losses in surplus consistent with SSAP No. 10—Income Taxes;

   c. The remainder of the income tax reduction, if any, is related to an amount that is deductible for income tax purposes but does not affect net income. The remainder of the income tax reduction shall not be included in income, but shall be added to capital stock or gross paid-in and contributed surplus in the period of the income tax reduction. Conversely, a tax reduction may be less than if recorded compensation expenses were deductible for income tax purposes. If so, the reporting entity may deduct the difference from capital stock or gross paid-in and contributed surplus in the period of the income tax reduction, to the extent that income tax reductions under the same or similar
compensatory stock option, purchase, or award plans have been included in capital stock or gross paid-in and contributed surplus.

12. In certain situations, it may be advantageous to the reporting entity to compensate an employee to make an option that is detrimental to him but advantageous to the company. A reporting entity may, either by cash payment or otherwise, reimburse an employee for his action related to a stock option, purchase, or award plan that results in a reduction of income taxes of the reporting entity; for example, for incentive stock purchase plans, a reduction in the purchase price of stock is allowed. The reporting entity shall include this reimbursement as an expense.

13. Stock option, purchase, and award plans of the principal stockholder (i.e., a holding company) or equity instruments granted or otherwise transferred directly to an employee by a principal stockholder shall be treated as contributed surplus by the principal stockholder with the offsetting charge accounted for in accordance with this statement, unless such transfers are clearly for a purpose other than compensation for services rendered the reporting entity.

14. Compensation expense related to stock appreciation rights and other variable stock option or award plans shall be measured at the end of each period as the amount by which the quoted market value of the shares of the enterprise's stock covered by a grant exceeds the option price or value specified under the plan and should be accrued as a charge to expense over the periods the employee performs the related services. Changes in the quoted market value should be reflected as an adjustment of accrued compensation and compensation expense in the periods in which the changes occur until the date the number of shares and purchase price, if any, are both known.

Disclosures

15. The financial statements shall disclose deferred stock compensation plans for employees such as profit sharing, stock option, or incentive plans. If warranted by materiality, the following information with regard to stock options shall be furnished and analogous information shall be supplied for warrants or rights:

   a. A brief description of the terms of each option arrangement including the title and amount of securities to option; the year or years during which the options were granted; and the year or years during which the optionees became, or will become, entitled to exercise the options; and

   b. The number of shares under option at the end of the statement year; the number of shares with respect to which options became exercisable during the year; and the number of shares with respect to which options were exercised during the year; and the option price and fair market value thereof, per share, and in total for each of the three categories.

The required information may be summarized by category as appropriate and shall be disclosed separately for agents and brokers, employees and officers, and others. The disclosures shall be supplied whether the stock involved relates to the reporting entity, the parent of the reporting entity, a subsidiary of the reporting entity, or an affiliated corporation.

16. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 15 above shall be included in the annual audited statutory financial reports only.

Postretirement Benefits Other Than Pensions

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for employers’ accounting for postretirement benefits other than pensions.

SUMMARY CONCLUSION

2. Postretirement benefits are all forms of benefits, other than retirement income, provided by an employer to retirees. Those benefits may be defined in terms of specified benefits that are provided to retirees as the need for those benefits arises, such as certain health care benefits, or they may be defined in terms of monetary amounts that become payable on the occurrence of a specified event, such as life insurance benefits or deferred compensation arrangements.

3. The principles contained herein shall apply to postretirement benefits other than pensions for all eligible and vested employees and vested former employees including their beneficiaries and covered dependents, pursuant to the terms of an employer’s undertaking to provide those benefits. Any asset resulting from an overfunding of the plan shall be recorded as a nonadmitted asset.

4. An employer shall account for its postretirement benefits on an accrual basis. The postretirement benefit obligation for current retirees and fully eligible or vested employees at transition (initial adoption date) is measured by estimating the actuarial present value of benefits expected to be received at retirement using explicit assumptions. A health care cost trend rate assumption is used in the estimation. A health care cost trend rate is an assumption about the annual rate(s) of change in the cost of health care benefits currently provided by the postretirement benefit plan, due to factors other than changes in the composition of the plan population by age and dependency status, for each year from the measurement date until the end of the period in which benefits are expected to be paid. The health care cost trend rates implicitly consider estimates of health care inflation, changes in health care utilization or status of the plan participants.

5. Plan assets, if any, shall be segregated or restricted, and measured at fair value.

6. In each period, estimated postretirement benefits for newly eligible or vested employees shall be accrued at eligibility date ("estimated eligibility cost"). Interest cost on the postretirement benefit obligation at the beginning of the period shall be recognized during the period. Actuarial gains and losses (other than plan asset gains and losses) arising from differences between assumptions and actual experience upon subsequent remeasurement of the obligation may be recognized as a component of the net periodic postretirement benefit cost in the current period or amortized. The net actuarial gain or loss shall be included as a component of the net periodic postretirement benefit cost for a year, if, as of the beginning of the year, that unrecognized net gain or loss exceeds 10 percent of the greater of the postretirement benefit obligation or the fair value of plan assets. That gain or loss, if not recognized immediately, shall be amortized over the average life expectancy of the employer’s fully vested and retiree group. The method elected must be consistently applied.

Gains or Losses On Plan Assets

7. Plan asset gains and losses are differences between the actual return on plan assets (including changes in the fair values of plan assets) during a period and the expected return on plan assets for that period. Amortization of an unrecognized net asset gain or loss shall be included as a component of net postretirement benefit cost for a year if, as of the beginning of the year, that unrecognized net gain or loss exceeds 10 percent of the greater of the postretirement benefit obligation or the fair value of plan assets.
assets. That excess shall be amortized over the average life expectancy of the employer’s fully vested and retiree group.

**Plan Amendments**

8. Plan amendments may include provisions that increase or reduce benefits to retirees and fully eligible employees. The cost of benefit improvements is the increase in the postretirement benefit obligation as a result of the plan amendment, measured at the date of the amendment. That increase shall be amortized over the average life expectancy of the employer’s fully vested and retiree group.

9. A plan amendment can reduce, rather than increase, the postretirement benefit obligation. A reduction in that obligation shall first reduce any existing unrecognized plan amendment cost, and then, reduce any remaining unrecognized transition obligation. The excess, if any, shall be amortized on the same basis as plan amendments that increase benefits.

**Financial Statement Presentation**

10. The net periodic postretirement benefit cost (i.e., the estimated eligibility cost, interest cost, actuarial gains or losses, and any amortization costs) shall be reflected in the income statement. If an employer elects immediate recognition of the initial transition obligation, it shall be accounted for as a change of accounting method (i.e., the initial transition obligation is recorded as an adjustment to statutory surplus).

**Transition Asset**

11. If the fair value of plan assets exceeds the postretirement obligation and a transition asset results, the asset shall be considered a nonadmitted asset.

**Defined Contribution Plans**

12. A defined contribution postretirement benefit plan is a plan that provides postretirement benefits by establishing an individual account for each participant and has terms that specify how contributions to the individual’s account are to be determined rather than the amount of postretirement benefits the individual is to receive. Under a defined contribution plan, postretirement benefits a plan participant will receive are limited to the amount contributed to the plan participant’s account, the returns earned on investments of these contributions, and forfeitures of other plan participants’ benefits that may be allocated to the plan participant’s account.

13. To the extent that an employer’s defined contributions to an individual’s account are vested or irrevocable, the net postretirement benefit cost for a period shall be the contribution called for in that period. If a plan calls for contributions for periods after an individual retires, the estimated costs shall be accrued at retirement date.

**Consolidated/Holding Company Plans**

14. The employees of many reporting entities are eligible for certain postretirement benefits other than pensions provided by a parent company or holding company. A reporting entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation of the benefits earned during the period. A liability shall be established for any such amounts due, but not yet paid.
15. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the postretirement benefit expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for postretirement benefits other than pensions, then the requirements outlined in paragraphs 2 through 13 and paragraphs 16 through 18 of this statement shall be applied.

Disclosures

16. The following disclosures shall be made for postretirement benefit plans:
   a. A description of the plan(s);
   b. A description of the plan’s policy;
   c. The method of determination and the amount of postretirement benefit expense;
   d. The amount of the postretirement benefit obligation for retirees and fully eligible or vested employees and the fair value of the plan assets valued as of the most recent actuarial valuation date;
   e. The amount of the postretirement benefit obligation recorded in the financial statements;
   f. The amount of the postretirement obligation for nonvested employees as of the most recent actuarial valuation date;
   g. The discount and health care cost trend rate used in the estimations;
   h. The effect of a one-percentage-point increase in the assumed health care cost trend rates for each future year on (i) the aggregate of the estimated eligibility and interest cost components of net periodic postretirement benefit cost and (ii) the postretirement benefit obligation for health care benefits (for purposes of this disclosure, all other assumptions shall be held constant and the effects shall be measured based upon the substantive plan that is the basis of accounting);
   i. Significant matters affecting the year-to-year comparability of the plan information; and
   j. An employer who is a member of a multi-employer plan shall disclose a description of the plan(s), the method of determination and the amount of postretirement benefit expense for the employer/member and the unfunded postretirement benefit obligation.

17. The following disclosures shall be made for postretirement defined contribution plans:
   a. A description of the plan(s), including employee groups covered;
   b. The basis for determining contributions;
   c. The nature and effect of significant matters affecting comparability of information for all periods presented; and
   d. The amount of cost recognized during the period.

18. Refer to the preamble for further discussion regarding disclosure requirements.
Relevant Literature

19. This statement adopts FASB Statement No. 106, Employers' Accounting for Postretirement Benefits Other Than Pensions (FAS 106) and Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967, paragraphs 6 through 8 with the following modifications:

   a. Any asset which results from an excess of the fair value of plan assets over the postretirement benefit obligation shall be recorded as a nonadmitted asset;

   b. Calculation of the postretirement benefit obligation shall exclude non-vested employees. Partially vested employees are included only to the extent of their vested amounts; and

   c. The disclosures required by this statement are modified from those required by FAS 106 in consideration of the modification in this statement to include only vested employees.

20. This statement adopts FASB Emerging Issues Task Force No. 93-3, Plan Assets under FASB Statement No. 106.

Effective Date and Transition

21. For most reporting entities, the transition or initial adoption date was January 1, 1993. For reporting entities whose plans are outside the United States and for defined benefits of employers with no more than 500 plan participants in the aggregate, the transition or initial adoption was January 1, 1995. At transition, an employer elects to recognize the unfunded postretirement benefit obligation immediately in statutory surplus or amortize it as a component of net periodic postretirement benefit cost over a period of up to twenty years.

22. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Debt and Holding Company Obligations

SCOPE OF STATEMENT

1. The purpose of this statement is to establish statutory accounting principles for recording debt and related disclosure requirements; including holding company obligations and any related guarantees in the financial statements of an insurance company subsidiary, and debt obligations of Employee Stock Ownership Plans (ESOPs).

SUMMARY CONCLUSION

Debt

2. Debt shall be reported as a liability unless (a) it is debt on real estate in accordance with SSAP No. 40—Real Estate Investments (i.e., reported as a reduction in the carrying value of real estate), (b) it is offset against another asset in accordance with SSAP No. 64—Offsetting and Netting of Assets and Liabilities, or (c) other treatment is specified elsewhere within the codification. Instruments that meet the requirements to be recorded as surplus as specified in SSAP No. 72—Surplus and Quasi-reorganizations are not considered debt.

3. Debt discount or premium, if any, shall be reported in the balance sheet as a direct deduction from or addition to the face amount of the note. Discount or premium shall be amortized over the life of the note using the interest method.

4. Interest on debt shall be accrued and charged to operations over the life of the debt, except when capitalized in accordance with SSAP No. 44—Capitalization of Interest. Interest payable shall include interest payable on all debt reported as a liability, approved interest on surplus notes, and interest payable on debt reported as a reduction in the carrying value of real estate.

5. Debt issuance costs (e.g., loan fees and legal fees) do not meet the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets. Accordingly, these costs shall be charged to operations in the period incurred.

6. Debt obligations of ESOPs shall be reported as debt by company sponsors, except when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company stock, contributions from the company, or the sale or exchange of the company's securities. ESOPs are addressed in SSAP No. 12—Employee Stock Ownership Plans.

7. Debt which is subject to a troubled debt restructuring shall be accounted for in accordance with SSAP No. 36—Troubled Debt Restructuring.

8. convertible debt securities that are convertible into common stock of the issuer or an affiliated company at a specified price at the option of the holder and which are sold at a price not significantly in excess of the face amount shall be accounted for solely as debt at the time of issuance. An expense shall be recognized, equal to the fair value of additional securities granted or other consideration issued to induce conversion subsequent to the issuance of convertible debt securities.

9. Proceeds from debt issued with detachable stock purchase warrants shall be allocated based on the relative fair value of the two securities at the time of issuance. The value attributable to the warrants shall be accounted for as paid-in capital.
10. Other types of debt securities shall be accounted for in accordance with the substance of the transaction.

11. A reporting entity shall derecognize a liability if, and only if, it has been extinguished. A liability has been extinguished if either of the following conditions is met:
   a. The reporting entity pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods or services, or reacquisition by the debtor of its outstanding debt securities; or
   b. The reporting entity is legally released from being the primary obligor under the liability, either judicially or by the creditor.

Holding Company Obligations

12. In situations where the reporting entity does not guarantee the obligation of the holding company, there is no legal obligation on the part of the reporting entity. Therefore, the reporting entity shall not record the obligation of its parent holding company unless the obligation relates to services or benefits incurred by a non-insurance parent company or holding company on its behalf. In these situations, the reporting entity shall recognize an expense for its share of the services or benefits provided to it during the period by the parent company or holding company based on an allocation from the parent or holding company. A liability shall be established for any such amounts due, but not yet paid. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. SSAP No. 8—Pensions (SSAP No. 8), SSAP No. 11—Postemployment Benefits and Compensated Absences (SSAP No. 11), and SSAP No. 14—Postretirement Benefits Other Than Pensions (SSAP No. 14) address specific examples where the obligation relates to benefits provided to the subsidiary by a non-insurance parent company or holding company.

13. If the reporting entity guarantees an obligation of the holding company, the guidance in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets shall be followed for determining the recording and disclosure of the guarantee. SSAP Nos. 8, 11, and 14 provide specific accounting and disclosure guidelines for employee benefit plans when the reporting entity is directly liable for obligations under the plan.

Disclosures

14. The financial statements shall disclose the following items related to debt:
   a. Date issued;
   b. Pertinent information concerning the kind of borrowing (e.g., debentures, commercial paper outstanding, bank loans, and lines of credit);
   c. Face amount of the debt;
   d. Carrying value of debt;
   e. The rate at which interest accrues;
   f. The effective interest rate;
   g. Collateral requirements;
Debt and Holding Company Obligations

h. Interest paid in the current year;

i. A summary of significant debt terms and covenants and any violations;

j. The combined aggregate amount of maturities and sinking fund requirements for each of the five years following the latest balance sheet presented;

k. If debt was considered to be extinguished by in-substance defeasance prior to the effective date of this statement and any of the debt remains outstanding, a general description of the transaction and the amount of debt that is considered extinguished at the end of the period; and

l. If assets are set aside after the effective date of this statement solely for satisfying scheduled payments of a specific obligation, a description of the nature of restrictions placed on those assets.

15. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

16. This statement adopts Accounting Principles Board Opinion No. 14, Accounting for Convertible Debt and Debt Issued with Stock Purchase Warrants and FASB Statement No. 84, Induced Conversions of Convertible Debt.

17. This statement adopts Accounting Principles Board Opinion No. 21, Interest on Receivables and Payables, with a modification to require that debt issuance costs be charged to operations.

18. This statement adopts Accounting Principles Board Opinion No. 26, Early Extinguishment of Debt with modification to require that gains and losses from extinguishment of debt be reported as capital gains or losses, and charged to operations.

19. This statement adopts paragraphs 13 and 25 of AICPA Statement of Position 93-6, Employers’ Accounting for Employee Stock Ownership Plans (SOP 93-6) with a modification to exclude debt obligations when the ESOP has both the ability and intent to satisfy the debt from sources other than dividends on the company’s stock, contributions from the company, or the sale or exchange of the company’s securities. This statement rejects paragraph 37 of SOP 93-6 as it relates to reporting gains and losses on extinguishment of debt which shall be accounted for consistent with SSAP No. 24—Discontinued Operations and Extraordinary Items.

20. This statement adopts FASB Emerging Issues Task Force No. 90-19, Convertible Bonds with Issuer Option to Settle for Cash upon Conversion with a modification to reject guidance related to earnings per share.

21. This statement adopts FASB Technical Bulletin No. 80-1, Early Extinguishment of Debt through Exchange for Common or Preferred Stock, with a modification to reject guidance related to classification of the loss as an extraordinary item.

22. This statement adopts the following pronouncements:

a. Accounting Principles Board Opinion No. 12, paragraphs 16 and 17, Omnibus Opinion - 1967;

b. AICPA Accounting Interpretations of APB 21, Interest on Receivables and Payables;
c. AICPA Accounting Interpretations of APB 26, Early Extinguishment of Debt;
d. FASB Emerging Issues Task Force No. 85-9, Revenue Recognition on Options to Purchase Stock of Another Entity;
e. FASB Emerging Issues Task Force No. 85-17, Accrued Interest upon Conversion of Convertible Debt;
f. FASB Emerging Issues Task Force No. 85-29, Convertible Bonds with a "Premium Put";
g. FASB Emerging Issues Task Force No. 86-8, Sale of Bad-Debt Recovery Rights;
h. FASB Emerging Issues Task Force No. 86-15, Increasing-Rate Debt;
i. FASB Emerging Issues Task Force No. 86-18, Debtor’s Accounting for a Modification of Debt Terms;
j. FASB Emerging Issues Task Force No. 86-28, Accounting Implications of Indexed Debt Instruments;
k. FASB Emerging Issues Task Force No. 86-36, Invasion of a Defeasance Trust;
l. FASB Emerging Issues Task Force No. 95-15, Recognition of Gain or Loss When a Binding Contract Requires a Debt Extinguishment to Occur at a Future Date for a Specified Amount.

23. This statement rejects FASB Statement No. 4, Reporting Gains and Losses from Extinguishment of Debt and FASB Statement No. 64, Extinguishments of Debt Made to Satisfy Sinking-Fund Requirements—an Amendment of FASB Statement No. 4. This statement also rejects FASB Emerging Issues Task Force No. 84-40, Long-Term Debt Repayable by a Capital Stock.

Effective Date and Transition

24. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Electronic Data Processing Equipment and Software

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for electronic data processing (EDP) equipment and software.

SUMMARY CONCLUSION

2. EDP equipment and software generally meet the definition of assets established in SSAP No. 4—Assets and Nonadmitted Assets. EDP equipment and operating system software are admitted assets to the extent they conform to the requirements of this statement. Nonoperating system software are nonadmitted assets.

3. EDP equipment and software shall be depreciated for a period not to exceed three years using methods detailed in SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements.

4. The aggregate amount of admitted EDP equipment and operating system software (net of accumulated depreciation) shall be limited to three percent of the reporting entity’s capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any EDP equipment and operating system software, net deferred tax assets and net positive goodwill.

Disclosures

5. The following disclosures shall be made in the financial statements:
   a. Depreciation and amortization expense for the period;
   b. For EDP equipment and operating system software, balances of major classes of depreciable assets, by nature or function, at the balance sheet date;
   c. For EDP equipment and operating system software, accumulated depreciation and amortization, either by major classes of depreciable assets or in total, at the balance sheet date; and
   d. A general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets.

6. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 5 above shall be included in the annual audited statutory financial reports only.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

8. EDP equipment and software capitalized prior to January 1, 2001 shall be depreciated over the shorter of its remaining useful life or three years.

Preoperating and Research and Development Costs

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for organizational costs, research and development costs, and start-up costs for new and existing entities.

SUMMARY CONCLUSION

2. Preoperating, including organization and start up costs, and research and development costs shall be expensed as incurred. Preoperating and research and development costs are incurred for such new projects as: (a) arranging operations for a new entity (e.g., legal, actuarial and accounting costs associated with regulatory approval and licensing and issuance of stock), (b) establishing production, sales or service facilities at a new site, (c) changing operations or production significantly, or (d) developing and producing a new product, adopting a new process or offering a new service.

3. Preoperating, including organization and start up costs, and research and development costs specifically exclude tangible assets acquired in connection with such activities.

Disclosures

4. Disclosure shall be made in the financial statements of the total research and development costs charged to expense in each period for which an income statement is presented. The disclosure shall be included in the annual audited statutory financial report only.

5. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

6. This statement adopts FASB Statement No. 2, Accounting for Research and Development Costs and FASB Interpretation No. 6, Applicability of FASB Statement No. 2 to Computer Software. This statement also adopts FASB Statement No. 86, Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed, with the exception of paragraphs 5 and 6 and paragraphs 8 through 11. These paragraphs have been rejected to preclude the capitalization of software development costs. FASB Emerging Issues Task Force No. 96-14, Accounting for the Costs Associated with Modifying Computer Software for the Year 2000 is also adopted.

7. This statement rejects FASB Statement No. 7, Accounting and Reporting by Development Stage Enterprises and FASB Interpretation No. 7, Applying FASB Statement No. 7 in Financial Statements of Established Operating Enterprises, an interpretation of FASB Statement No. 7.

Effective Date and Transition

8. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

SSAP NO. 18—GLOSSARY
This page is intentionally left blank
Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for accounting for transfers and servicing of financial assets and extinguishments of liabilities. This statement discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement.

2. Except as addressed in this statement and in other statements (including, but not limited to, SSAP No. 15—Debt and Holding Company Obligations (SSAP No. 15), SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties, SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities, SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities), SSAP No. 32—Investments in Preferred Stock (excluding investments in preferred stock of subsidiary, controlled, or affiliated entities), SSAP No. 42—Sale of Premium Receivables (SSAP No. 42), SSAP No. 43—Loan-backed and Structured Securities, SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements (SSAP No. 45), and SSAP No. 33—Securitization (SSAP No. 33)), transfers and servicing of financial assets and extinguishments of liabilities shall be accounted for in accordance with FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (FAS 125).

SUMMARY CONCLUSION

3. Except as discussed in paragraph 35, a transfer of a group of financial assets, or a portion of a financial asset in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if, and only if, all of the following conditions are met:

   a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (see paragraphs 12 and 13);

   b. Either (i) each transferee obtains the right, free of conditions that constrain it from taking advantage of that right (see paragraph 14), to pledge or exchange the transferred assets or (ii) the transferee is a qualifying special-purpose entity as defined in paragraph 9 of SSAP No. 33 and the holders of beneficial interests in that entity have the right, free of conditions that constrain them from taking advantage of that right (see paragraph 14), to pledge or exchange those interests; and

   c. The transferor does not maintain effective control over the transferred assets through (i) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (see paragraphs 15-17) or (ii) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable (see paragraph 18).

4. Upon completion of any transfer of financial assets, the transferor shall:

   a. Continue to carry in its balance sheet any retained interest in the transferred assets, including, if applicable, beneficial interests in assets transferred to a qualifying special-
purpose entity in a securitization (see SSAP No. 33), and retained undivided interests (see paragraph 20); and

b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (see paragraphs 19 and 20).

5. Upon completion of a transfer of assets that satisfies the conditions to be accounted for as a sale (see paragraph 3), the transferor (seller) shall:

a. Eliminate the transferred assets from the balance sheet;

b. Allocate the previous carrying amount of the transferred assets to the securities representing beneficial interests retained by the reporting entity, if any, and the securities representing beneficial interests not retained, if any, based on the relative fair values of the transferred assets at the date of transfer;

c. Record in its balance sheet, the allocated carrying value of the securities representing retained beneficial interests in the assets (e.g., loan-backed securities);

d. Recognize all additional assets obtained (i.e., other than the securities representing retained beneficial interests which are recorded in accordance with 5 c.) and liabilities incurred in consideration as proceeds of the sale;

e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value; and

f. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an IMR, realized gains and losses shall be reported as net realized capital gains or losses in the statement of income.

6. The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value (in aggregate, presumptively the price paid).

7. Repurchase agreements, reverse repurchase agreements, and dollar repurchase agreements shall meet the definition of SSAP No. 45. When an asset is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales, and shall be accounted for as sales and disclosed as required by paragraph 37. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred assets.

8. If a transfer of financial assets in exchange for cash or other consideration (other than beneficial interests in the transferred assets) (a) does not meet the criteria for a sale in paragraph 3, or (b) is a sale of receivables with recourse (see paragraph 35); the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (see paragraph 10).
Recognition and Measurement of Servicing Assets and Liabilities

9. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained, or separate purchase or assumption of the servicing. If distinct servicing rights to transferred assets exist and are retained by the reporting entity, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations. The servicing asset or liability shall be amortized into income in proportion to, and over the period of estimated servicing income (if an asset) or estimated servicing loss (if a liability). A servicing asset or liability shall be assessed for impairment or increased obligation based on its fair value.

Secured Borrowings and Collateral

10. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (see paragraph 8). The accounting for collateral by the debtor (or obligor) and the secured party depends on whether the secured party has taken control over the collateral, and on the rights and obligations that result from the collateral arrangement:

a. If the secured party is permitted to sell or repledge the collateral, and the debtor does not have the right and ability to redeem the collateral on short notice, (e.g., by substituting other collateral or terminating the contract), then:

i. The debtor shall disclose the amount of such assets and the secured party’s right to sell or repledge such collateral;

ii. The secured party shall recognize that collateral as its asset, initially measure it at fair value, and also recognize its obligation to return it.

b. If the secured party sells or repledges collateral on terms that do not give it the right and ability to repurchase or redeem the collateral from the transferee on short notice, the secured party shall recognize the proceeds from the sale or the asset repledged and its obligation to return the asset to the extent that it has not already recognized them. The sale or repledging of the asset is a transfer subject to the provisions of this statement;

c. If the debtor defaults under the terms of the secured contract and is no longer entitled to redeem the collateral, it shall derecognize the collateral. The secured party shall recognize the collateral as an asset (to the extent it has not already recognized it) and initially measure it at fair value;

d. Otherwise, the debtor shall continue to carry the collateral as an asset, and the secured party shall not recognize the pledged asset.
Extinguishments of Liabilities

11. A debtor shall derecognize a liability if, and only if, it has been extinguished (see SSAP No. 15). A liability has been extinguished if either of the following conditions is met:

   a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities; or

   b. The debtor is legally released from being the primary obligor under the liability, either judicially or by the creditor.

Isolation beyond the Reach of the Transferor and Its Creditors

12. The nature and extent of supporting evidence required for an assertion in financial statements that transferred financial assets have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered. That consideration includes making judgments about whether the contract or circumstances permit the transferor to revoke the transfer. It also may include making judgments about the kind of bankruptcy or other receivership into which a transferor or special-purpose entity might be placed, whether a transfer of financial assets would likely be deemed a true sale at law, whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred assets is appropriate only if the available evidence provides reasonable assurance that the transferred assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its affiliates, except for an affiliate that is a qualifying special-purpose entity designed to make remote the possibility that it would enter bankruptcy or other receivership (see SSAP No. 33).

13. Many common financial transactions, for example, typical repurchase agreements (see SSAP No. 45) and securities lending transactions, isolate transferred assets from the transferor, although they may not meet the other criteria for surrender of control.

Conditions That Constrain a Transferee

14. Many transferor-imposed or other conditions on a transferee’s contractual right to pledge or exchange a transferred asset constrain a transferee from taking advantage of that right. However, a transferor’s right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor’s permission to sell or pledge that shall not be unreasonably withheld, or a prohibition on sale to the transferor’s competitor generally does not constrain a transferee from pledging or exchanging the asset and, therefore, presumptively does not preclude a transfer containing such a condition from being accounted for as a sale. For example, a prohibition on sale to the transferor’s competitor would not constrain the transferee if it were able to sell the transferred assets to a number of other parties; however, it would be a constraint if that competitor were the only potential willing buyer.

Agreements That Maintain Effective Control over Transferred Assets

15. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred assets from the transferee maintains the transferor’s effective control over those assets, and the transfer is therefore to be accounted for as a secured borrowing, if and only if all of the following conditions are met:
a. The assets to be repurchased or redeemed are the same or substantially the same as those transferred (see paragraph 16);

b. The transferor is able to repurchase or redeem them on substantially the agreed terms, even in the event of default by the transferee (see paragraph 17);

c. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price; and

d. The agreement is entered into concurrently with the transfer.

16. To be substantially the same, the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same);

b. Identical form and type so as to provide the same risks and rights;

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield);

d. Identical contractual interest rates;

e. Similar assets as collateral; and

f. The same aggregate unpaid principal amount or principal amounts within accepted good delivery standards for the type of security involved.

17. To be able to repurchase or redeem assets on substantially all of the agreed terms, even in the event of default by the transferee, a transferor must at all times during the contract term have obtained cash or other collateral sufficient to fund substantially all of the cost of purchasing replacement assets from others.

18. A call option or forward contract that entitles the transferor to repurchase, prior to maturity, transferred assets not readily obtainable elsewhere maintains the transferor’s effective control, because it would constrain the transferee from exchanging those assets, unless it is only a cleanup call.

**Assets Obtained and Liabilities Incurred as Proceeds**

19. The proceeds from a sale of financial assets consist of the cash and any other assets obtained in the transfer less any liabilities incurred. Any asset obtained that is not an interest in the transferred asset is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.
Retained Interests

20. Other interests in transferred assets—those that are not part of the proceeds of the transfer—are retained interests over which the transferor has not relinquished control. They shall be measured at the date of the transfer by allocating the previous carrying amount between the assets sold, if any, and the retained interests, based on their relative fair values. That procedure shall be applied to all transfers in which interests are retained, even those that do not qualify as sales. Examples of retained interests include securities backed by the transferred assets, undivided interests, servicing assets, and cash reserve accounts and residual interests in securitization trusts. If a transferor cannot determine whether an asset is a retained interest or proceeds from the sale, the asset shall be treated as proceeds from the sale and accounted for in accordance with paragraph 19.

Fair Value

21. The fair value of an asset (or liability) is the amount at which that asset (or liability) could be bought (or incurred) or sold (or settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If a quoted market price is available, the fair value is the product of the number of trading units times market price.

22. If quoted market prices are not available, the estimate of fair value shall be based on the best information available. The estimate of fair value shall consider prices for similar assets and liabilities and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis. Valuation techniques for measuring financial assets and liabilities and servicing assets and liabilities shall be consistent with the objective of measuring fair value. Those techniques shall incorporate assumptions that market participants would use in their estimates of values, future revenues, and future expenses, including assumptions about interest rates, default, prepayment, and volatility. In measuring financial liabilities and servicing liabilities at fair value by discounting estimated future cash flows, an objective is to use discount rates at which those liabilities could be settled in an arm’s-length transaction.

23. Estimates of expected future cash flows, if used to estimate fair value, shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence shall be considered in developing estimates of expected future cash flows. The weight given to the evidence shall be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.

If It Is Not Practicable to Estimate Fair Values

24. If it is not practicable to estimate the fair values of assets, the transferor shall record those assets at zero. If it is not practicable to estimate the fair values of liabilities, the transferor shall recognize no gain on the transaction and shall record those liabilities at the greater of:

a. The excess, if any, of (i) the fair values of assets obtained less the fair values of other liabilities incurred, over (ii) the sum of the carrying values of the assets transferred;

b. The amount that would be recognized in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets.
Securities Lending Transactions

25. When securities are loaned, they remain assets of the reporting entity and are not removed from the accounting records. Any fees received by the transferor for loaning the securities should be recorded as miscellaneous income. During a securities lending transaction, collateral is pledged by the transferee to the transferor that has loaned the securities. If the collateral pledged by the transferee is not available for the general use of the transferor (restricted), then the transferor shall not reflect the collateral in the transferor’s balance sheet as an asset, and the transferor shall not establish a liability for the return of the collateral. However, if the collateral pledged is available for the general use of the transferor (unrestricted), then the collateral shall be recorded as an asset on the transferor’s balance sheet and a separate liability shall be established on the transferor’s balance sheet to record the obligation to return the collateral. The failure by the transferor to maintain sufficient collateral for the loaned securities would result in non-admission of the undercollateralized portion. See the NAIC Purposes and Procedures of the Securities Valuation Office for specific collateral requirements.

26. Securities lending transactions are generally initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer’s failure to deliver securities sold. Transferees (borrowers) of securities generally are required to provide collateral to the transferor (lender) of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities borrowed. If the collateral is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or rebated to the transferee. If the collateral is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of collateral (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash collateral impose market and credit risks on the transferor.

27. Securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred assets before their maturity under which the transferor maintains effective control over those assets (see paragraphs 15-18). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder is permitted by contract or custom to sell or repledge) received as collateral is considered the amount borrowed, the securities loaned are considered pledged as collateral against the cash borrowed, and any rebate paid to the transferee of securities is interest on the cash the transferor is considered to have borrowed. Collateral provided in securities lending transactions that are accounted for as secured borrowings shall be reported and disclosed like other collateral, as set forth in paragraphs 10 and 25.

28. In some transactions, characterized as securities lending, all of the criteria in paragraph 3 are met. During the term of such agreements, the transferor has surrendered control over the securities transferred and the transferee has obtained control over those securities, with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the collateral and the forward repurchase commitment. Those transactions shall be accounted for:

a. By the transferor as a sale of the loaned securities, for proceeds consisting of the collateral and a forward repurchase commitment. (If the collateral is a financial asset that the holder is permitted to sell or repledge and the debtor does not have the right and ability to redeem the collateral on short notice, e.g., by substituting other collateral or terminating the contract, that financial asset is proceeds of the sale of the loaned securities. To the extent that the collateral consists of letters of credit or other financial
instruments that the holder is not permitted to sell or pledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee); and

b. By the transferee as a purchase of the borrowed securities in exchange for the collateral and a forward resale commitment.

**Loan Syndications**

29. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

30. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender who then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is also functioning as a servicer and, therefore, shall only recognize its portion of the loan as an asset.

**Loan Participations**

31. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers undivided interests in the loan to other entities.

32. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor (originating lender) continues to service the loan. The transferee (participating entity) may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

33. If the loan participation agreement gives the transferee the right to pledge or exchange those participations and the other criteria in paragraph 3 are met, the transfers to the transferee shall be accounted for by the transferor as sales of financial assets. A transferor’s right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor’s permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor’s competitor is a limitation on the transferee’s rights but presumptively does not constrain a transferee from exercising its right to pledge or exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging their participations, the transferor has not relinquished control over the loan and shall account for the transfers as secured borrowings.

**Factoring Arrangements**

34. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the criteria in paragraph 3 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.
Transfers of Receivables with Recourse

35. In a transfer of receivables with recourse, the transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. A transfer of receivables with recourse shall not be recognized as a sale but rather, as a financing. A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received. Sales of premium receivables are addressed in SSAP No. 42.

Disclosures

36. A reporting entity shall disclose the following:
   a. If it is not practicable to estimate the fair value of certain assets obtained or liabilities incurred in transfers of financial assets during the period, a description of those items and the reasons why it is not practicable to estimate their fair value;
   b. Description of any loaned securities, including the amount, a description of, and the policy for, requiring collateral, and whether or not the collateral is restricted; and
   c. For all servicing assets and servicing liabilities:
      i. The amounts of servicing assets nonadmitted or liabilities recognized and amortized during the period; and
      ii. The fair value of servicing liabilities for which it is practicable to estimate that value and the method and significant assumptions used to estimate the fair value.

37. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 7, involving transactions for securities with a NAIC designation of 3 or below, or unrated:
   a. A description of the reporting entity’s objectives regarding these transactions;
   b. An aggregation of transactions by NAIC Designation 3 or below, or unrated;
   c. The number of transactions involved during the reporting period;
   d. The book value of securities sold;
   e. The cost of securities repurchased; and
   f. The realized gains/losses associated with the securities involved.

38. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures required by paragraph 37 shall be made for the current quarter in the quarterly statement, and for the year in the annual statement.

Relevant Literature

39. This statement adopts FAS 125 with modification to paragraphs 9, 10 a., 11 d., 13, 15—17, 35—41, and 68. Additionally, paragraphs 14, 59—60, 77—81, and 83 are rejected. The modifications to FAS 125 primarily relate to (a) the nonadmission of servicing rights assets, (b) the accounting for repurchase...
agreements, reverse repurchase agreements, and dollar repurchase agreements, (c) the accounting for realized gains and losses for reporting entities required to maintain an IMR, (d) the accounting for financial assets subject to prepayment, (e) the accounting for assets pledged as collateral, (f) the accounting for leases in accordance with SSAP No. 22—Leases, and (g) the accounting for sales of receivables with recourse. Paragraphs 77-81 are rejected because they are not applicable to the insurance industry.

40. This statement adopts AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as used in Certain Audit Guides and a Statement of Position. This statement adopts FASB Emerging Issues Task Force No. 87-34, Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB Emerging Issues Task Force No. 88-11, Allocation of Recorded Investment When a Loan as Part of a Loan is Sold, FASB Emerging Issues Task Force No. 88-18, Sales of Future Revenues, FASB Emerging Issues Task Force No. 88-22, Securitization of Credit Card and Other Receivable Portfolios, FASB Emerging Issues Task Force No. 90-21, Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB Emerging Issues Task Force No. 95-5, Determination of What Risks and Rewards, If Any, Can Be Retained and Whether Any Unresolved Contingencies May Exist in a Sale of Mortgage Loan Servicing Rights and FASB Emerging Issues Task Force No. 96-19, Debtor’s Accounting for a Modification or Exchange of Debt Instruments.

41. This statement rejects FASB Statement No. 127, Deferral of the Effective Date of Certain Provisions of FASB Statement No. 125, an amendment of FASB Statement No. 125, FASB Emerging Issues Task Force No. 84-5, Sale of Marketable Securities with a Put Option, FASB Emerging Issues Task Force No. 92-2, Measuring Loss Accruals by Transferors of Receivables with Recourse, and FASB Emerging Issues Task Force No. 96-20, Impact of FASB Statement No. 125 on Consolidation of Special-Purpose Entities.

Effective Date and Transition

42. This statement shall be effective for transfers and servicing of financial assets and extinguishments of liabilities occurring after January 1, 2001, and shall be applied prospectively.

43. For each servicing contract in existence before January 1, 2001, previously recognized or nonadmitted servicing rights and excess servicing receivables shall be combined, net of any previously recognized servicing obligations under that contract, as a servicing asset (nonadmitted) or liability. Thereafter, the subsequent measurement provisions of this statement shall be applied to the servicing assets (nonadmitted) or liabilities for those servicing contracts.

SSAP NO. 18—GLOSSARY

Beneficial interests

Rights to receive all or portions of specified cash inflows to a trust or other entity, including senior and subordinated shares of interest, principal, or other cash inflows to be passed-through or paid-through, premiums due to guarantors, and residual interests.

Cleanup call

An option held by the servicer, which may be the transferor, to purchase transferred financial assets when the amount of outstanding assets falls to a level at which the cost of servicing those assets becomes burdensome.

Collateral

Personal or real property in which a security interest has been given.

Derecognize

Remove previously recognized assets or liabilities from the balance sheet.

Derivative financial instrument

A futures, forward, swap, or option contract, or other financial instrument with similar characteristics.

Financial asset

Cash, evidence of an ownership interest in an entity, or a contract that conveys to a second entity a contractual right (a) to receive cash or another financial instrument from a first entity or (b) to exchange other financial instruments on potentially favorable terms with the first entity.

Financial liability

A contract that imposes on one entity a contractual obligation (a) to deliver cash or another financial instrument to a second entity or (b) to exchange other financial instruments on potentially unfavorable terms with the second entity.

Proceeds

Cash, derivatives, or other assets that are obtained in a transfer of financial assets, less any liabilities incurred.

Recourse

The right of a transferee of receivables to receive payment from the transferor of those receivables for (a) failure of debtors to pay when due, (b) the effects of prepayments, or (c) adjustments resulting from defects in the eligibility of the transferred receivables.

Securitization

The process by which financial assets are transformed into securities.
Security interest

A form of interest in property that provides that upon default of the obligation for which the security interest is given, the property may be sold in order to satisfy that obligation.

Seller

A transferor that relinquishes control over financial assets by transferring them to a transferee in exchange for consideration.

Servicing asset

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are expected to more than adequately compensate the servicer for performing the servicing. A servicing contract is either (a) undertaken in conjunction with selling or securitizing the financial assets being serviced or (b) purchased or assumed separately.

Servicing liability

A contract to service financial assets under which the estimated future revenues from stated servicing fees, late charges, and other ancillary revenues are not expected to adequately compensate the servicer for performing the servicing.

Transfer

The conveyance of a noncash financial asset by and to someone other than the issuer of that financial asset. Thus, a transfer includes selling a receivable, putting it into a securitization trust, or posting it as collateral but excludes the origination of that receivable, the settlement of that receivable, or the restructuring of that receivable into a security in a troubled debt restructuring.

Transferee

An entity that receives a financial asset, a portion of a financial asset, or a group of financial assets from a transferor.

Transferor

An entity that transfers a financial asset, a portion of a financial asset, or a group of financial assets that it controls to another entity.

Undivided interest

Partial legal or beneficial ownership of an asset as a tenant in common with others. The proportion owned may be pro rata, for example, the right to receive 50 percent of all cash flows from a security, or non-pro rata, for example, the right to receive the interest from a security while another has the right to the principal.

Unrestricted collateral

Securities received that may be sold or repledged and which were obtained under agreements that are not subject to repurchase or redemption on short notice, for example, by substitution of other collateral or termination of the contract.

Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for furniture, fixtures, and equipment (excluding electronic data processing equipment and software that is addressed in SSAP No. 16—Electronic Data Processing Equipment and Software (SSAP No. 16)), leasehold improvements paid by the reporting entity as lessee, and depreciation of property and amortization of leasehold improvements.

SUMMARY CONCLUSION

Furniture, Fixtures and Equipment

2. Furniture, fixtures and equipment generally meet the definition of assets established in SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4). Within that definition, such items also meet the criteria defining nonadmitted assets. Accordingly, these assets shall be depreciated against net income as the estimated economic benefit expires and the undepreciated portion of these assets shall be reported as nonadmitted assets and charged against surplus.

3. In accordance with the reporting entity’s capitalization policy, immaterial amounts of such assets can be expensed when purchased.

Leasehold Improvements Paid by the Reporting Entity as Lessee

4. Leasehold improvements shall be defined as lessee expenditures that are permanently attached to an asset that a reporting entity is leasing under an operating lease.

5. Leasehold improvements that increase the value and enhance the usefulness of the leased asset meet the definition of assets established in SSAP No. 4. Within that definition, such items also meet the criteria defining nonadmitted assets. Accordingly, such assets shall be reported as nonadmitted assets and charged against surplus. These nonadmitted assets shall be amortized against net income over the shorter of their estimated useful life or the remaining life of the original lease excluding renewal or option periods. Leasehold improvements that do not meet the definition of assets shall be charged to expense when acquired.

6. In accordance with the reporting entity’s capitalization policy, immaterial amounts of such assets can be expensed when acquired.

Depreciation and Amortization

7. Depreciable assets include all tangible capital assets classified as either admitted or nonadmitted in accordance with SSAP No. 4. Land shall not be considered a depreciable asset.

8. The acquisition cost of depreciable assets, net of salvage, shall be depreciated against net income over the estimated useful lives of the assets in a systematic and rational manner. The acquisition cost of a leasehold improvement shall be amortized against net income over the shorter of its estimated useful life or the original lease term excluding options or renewal periods. For leasehold improvements capitalized subsequent to inception of the lease, the cost shall be amortized over the shorter of its estimated useful life or the remaining original lease term excluding options or renewal periods. Amounts capitalized for leasehold improvements in periods subsequent to the original lease term (i.e., during renewal periods),
are amortized utilizing the shorter of the estimated useful life of the asset or the remaining term of the renewal period.

9. A variety of systematic depreciation and amortization methods is available such as the straight-line method, sum-of-the-years' digits method, and various declining balance methods. The depreciation or amortization method selected shall be that which most appropriately allocates the cost of the depreciable asset or leasehold improvement over its estimated useful life. The use of the sinking fund or constant yield methods of depreciation does not constitute acceptable statutory accounting practice.

10. Useful lives of depreciable assets and leasehold improvements can be obtained from contractors, appraisers, engineers, and manufacturers, or they may be based on prior experience. Estimates published by the Internal Revenue Service can be helpful in the selection of useful lives for specific assets.

11. Changes in the estimated useful lives of depreciable assets or leasehold improvements from one period to another shall be considered a change in accounting estimate and shall be accounted for in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

12. Changes in depreciation or amortization methods from one period to another shall be considered a change in accounting principle and shall be accounted for in accordance with SSAP No. 3.

13. Depreciation and amortization expense shall be recorded in the statement of income in accordance with SSAP No. 70—Allocation of Expenses.

Disclosures

14. The following disclosures shall be made in the financial statements:

   a. Depreciation and amortization expense for the period;

   b. A general description of the method or methods used in computing depreciation and amortization with respect to major classes of depreciable assets and leasehold improvements.

15. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 14 above shall be included in the annual audited statutory financial reports only.

Relevant Literature

16. This statement adopts paragraphs 4 and 5 of Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967. This statement also adopts AICPA Practice Bulletin No. 1, Purpose and Scope of AcSEC Practice Bulletins and Procedures for Their Issuance, Exhibit A.

17. This statement rejects Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, “Chapters 9A and 9C,” however, it is considered appropriate to use the concepts of depreciable assets discussed in the GAAP guidance, which requires that the acquisition cost less salvage value be recorded as an expense over the estimated useful life of the asset, as the basis for the statutory guidance codified in this statement.
Effective Date and Transition

18. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

19. The use of the sinking fund or constant yield method does not constitute acceptable statutory accounting practice and these methods shall not be applied to new properties acquired since December 3, 1990 (the date the Emerging Accounting Issues Working Group reached its conclusion regarding this method) nor if the reporting entity changes its existing properties’ method of depreciation. This conclusion would not impact those properties currently being depreciated using the constant yield method.

Nonadmitted Assets

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for nonadmitted assets which are not specifically addressed in other statements.

SUMMARY CONCLUSION

2. The definition and accounting treatment for nonadmitted assets is outlined in SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4) as follows:

As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted.

SSAP No. 4 defines nonadmitted assets as follows:

A nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting, and is one which is:

a. Specifically identified within the Codification as a nonadmitted asset; or
b. Not specifically identified as an admitted asset within the Codification.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Codification. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires.

3. This statement shall not be considered an all-inclusive list of nonadmitted assets. Certain admitted assets and nonadmitted assets are addressed in other SSAPs.

4. Consistent with paragraph 2, the following assets shall be nonadmitted:

a. Deposits in Suspended Depositories—Amounts on deposit with suspended depositories may not be fully recoverable. Any amounts not reasonably expected to be recovered shall be written off in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5). Amounts in excess of that written off shall be nonadmitted as they are not available to satisfy obligations to policyholders;

b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments—In accordance with SSAP No. 5, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized as there are no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations;

c. Loans on Personal Security, Cash Advances To, Or In The Hands Of, Officers Or Agents And Travel Advances—In accordance with SSAP No. 5, amounts determined to be
uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off typically are unsecured and as such have no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Some of these items may also be considered prepaid expenses which, per SSAP No. 29—Prepaid Expenses, are nonadmitted;

d. All “Non-Bankable” Checks—Examples of “non-bankable” checks are NSF (non-sufficient funds) checks, post dated checks, or checks for which payment has been stopped. Although these checks may still maintain probable future benefits (and thus meet the definition of assets), at the date on which they are non-bankable they are not available for policyholder obligations and shall be nonadmitted until the uncertainty related to the probable future benefit is resolved and the checks are converted to available funds;

e. Trade Names And Other Intangible Assets—These assets, by their nature, are not readily marketable and available to satisfy policyholder obligations and shall be nonadmitted;

f. Automobiles, Airplanes and Other Vehicles—Automobiles, airplanes and other vehicles meet the definition of assets established in SSAP No. 4. However, they are not readily available to satisfy policyholder obligations and as a result the undepreciated portion shall be nonadmitted. The accounting for these assets shall be consistent with the accounting for equipment provided in SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements;

g. Company’s Stock as Collateral for Loan—When a reporting entity lends money and accepts its own stock as collateral for the loan, it shall report the amount of the loan receivable and any related accrued interest on the loan as a nonadmitted asset. The asset is nonadmitted as the collateral could not be used to satisfy the obligation in the event of default.

Relevant Literature

5. This statement rejects Chapters 3A and 11 of Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins.

Effective Date and Transition

6. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for admitted assets which are not specifically addressed in other statements.

SUMMARY CONCLUSION

2. The definition and accounting treatment for admitted assets is outlined in paragraphs 2 and 3 of SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4) as follows:

For purposes of statutory accounting, an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others’ access to it, and (c) the transaction or other event giving rise to the entity’s right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph number 3 below.

As stated in the Statement of Concepts, “The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet,” and are, therefore, considered nonadmitted. For purposes of the Codification, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting, and is one which is:

a. Specifically identified within the Codification as a nonadmitted asset; or

b. Not specifically identified as an admitted asset within the Codification.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Codification. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity’s capitalization policy, immaterial amounts of furniture, fixtures, equipment, or supplies, can be expensed when purchased.

3. Consistent with paragraph 2, the following assets shall be considered admitted and shall be reported in accordance with SSAP No. 4. These admitted assets are not addressed in other statements.

Collateral Loans

4. Collateral loans are unconditional obligations for the payment of money secured by the pledge of an investment and meet the definition of assets as defined in SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following limitations:
a. Loan Impairment—Determination as to the impairment of a collateral loan shall be based on current information and events. When it is considered probable that any portion of amounts due under the contractual terms of the loan will not be collected the loan is considered impaired. The impairment shall be measured based on the fair value of the collateral less estimated costs to obtain and sell the collateral. The difference between the net value of the collateral and the recorded asset shall be written off in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5);

b. Nonadmitted Asset—In accordance with SSAP No. 20—Nonadmitted Assets, collateral loans secured by assets that do not qualify as investments shall be nonadmitted. Further, any amount of the loan outstanding which is in excess of the permitted relationship of fair value of the pledged investment to the collateral loan shall be treated as a nonadmitted asset.

Cash Value of Life Insurance Where the Reporting Entity is Owner and Beneficiary

5. The cash value of life insurance policies where the reporting entity is the owner and beneficiary is similar to a cash deposit that is realizable on demand. As such, the cash value of a life insurance policy as of the date to which premiums have been paid, less any outstanding policy loans and surrender charges, shall be reported as an admitted asset.

Receivables for Securities

6. Sales of securities are recorded as of the trade date. A receivable due from the broker is established in instances when a security has been sold, but the proceeds from the sale have not yet been received. Unless the receivable for securities, other than a receivable arising from the sale of a security which was acquired on a “To Be Announced” (“TBA”) basis and which has yet to be actually received (see paragraph 9), meets the criteria set forth in paragraph 8, the receivable for securities is an admitted asset to the extent it conforms to the requirements of this statement.

7. An evaluation shall be made in accordance with SSAP No. 5, to determine if there is impairment. If, in accordance with SSAP No. 5, it is probable the balance or any portion thereof is uncollectible, any such deemed uncollectible receivable shall be written off and charged against income in the period the determination is made. If it is reasonably possible, but not probable, the balance or any portion thereof is uncollectible and is therefore not written off, the disclosure requirements outlined in SSAP No. 5 shall be followed.

8. Receivables for securities not received within 15 days from the settlement date shall be nonadmitted and shall be classified as “Other than invested assets”.

9. Receivables arising from the secondary sale of securities acquired on a TBA basis which have not yet been received by the seller in the secondary sale transaction, may be admitted until the security is exchanged for payment. TBA securities are originally purchased well in advance of the actual date of security issuance (frequently 90 days or more). Accordingly, secondary sales of securities so acquired may occur before the date of issuance. Sales of securities so acquired always include a provision that requires simultaneous delivery of the security and receipt of consideration. Upon the secondary sale, and prior to the actual receipt, of a security acquired on a TBA basis, the seller in the secondary sale transaction records a liability for the book value of the security thus sold and a receivable for the consideration reflected in the secondary sale transaction. Profits or losses emanating from the secondary sale transaction are recorded in the same manner as profits and losses emanating from any other sale transaction involving an investment.
Other Amounts Receivable Under Reinsurance Contracts

10. Amounts receivable from Servicemen's Group Life Insurance (SGLI) or Federal Employees’ Group Life Insurance (FEGLI) pools and Federal Crop Insurance programs shall be reported as admitted assets.

Guaranteed Investment Contracts

11. Guaranteed Investment Contracts (GICs) purchased for investment purposes meet the definition of assets as defined in SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement.

12. Purchases for which all contractual rights and ownership of the GIC result in an investment similar to a corporate bond shall be accounted for in accordance with the guidance in SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities.

13. An investment in a GIC payment stream is created when an intermediary purchases individual GICs, pools them, and sells the rights to the payment stream. These investments shall be reported as other long-term invested assets and shall be carried at amortized cost.

14. If, in accordance with SSAP No. 5, it is probable that the carrying value of a GIC is not fully recoverable the investment shall be considered impaired. Accordingly, the cost basis of the investment shall be written down to the undiscounted estimated cash flows and the amount of the write down shall be accounted for as a capital loss. The new cost basis shall not be changed for subsequent recoveries in fair value.

State Guarantee Association Promissory Notes

15. State guarantee associations have the statutory authority to reinsure any or all of the policies of an impaired or insolvent insurer. When this is done, the assuming carrier receives assets supporting the liabilities from the insolvent company’s estate and/or the responsible state guarantee association. If available, the state guarantee association transfers cash at the closing of the transaction. Promissory notes may be utilized in the event a guarantee association does not have the funds on hand or is unable to raise the funds by the closing date. These promissory notes are essentially credit risk free because the notes are backed by all member insurers of an association.

16. Promissory notes issued by state guarantee associations taken by an insurance company in connection with funding an assumption reinsurance agreement meet the definition of assets as defined in SSAP No. 4, are admitted assets to the extent they conform to the requirements of this statement, and shall be reported as a note receivable—other than invested assets.

Relevant Literature

17. This statement is consistent with FASB Statement No. 114, Accounting by Creditors for the Impairment of a Loan which was adopted with modification in SSAP No. 37—Mortgage Loans. This statement is consistent with Accounting Principles Board Opinion No. 21, Interest on Receivables and Payables which was adopted in SSAP No. 15—Debt and Holding Company Obligations.

18. This statement adopts FASB Emerging Issues Task Force No. 88-5, Recognition of Insurance Death Benefits and FASB Technical Bulletin 85-4, Accounting for Purchases of Life Insurance with the modification that the entity must be the owner and the beneficiary.
Effective Date and Transition

19. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

AUTHORITATIVE LITERATURE

Generally Accepted Accounting Principles

RELEVANT ISSUE PAPERS
SCOPE OF STATEMENT

1. The purpose of this statement is to establish statutory accounting principles for leases by lessors and lessees. It addresses:

   a. Accounting and reporting by lessees;
   b. Accounting and reporting by lessors;
   c. Sale-leaseback transactions;
   d. Leveraged leases for lessors;
   e. Related party leases; and
   f. Disclosures.

SUMMARY CONCLUSION

2. A lease is defined as an agreement conveying the right to use property, plant, or equipment (land and/or depreciable assets) usually for a stated period of time. This definition does not include agreements that are contracts for services that do not transfer the right to use property, plant, or equipment from one contracting party to the other (i.e., employee lease contracts). On the other hand, agreements that do transfer the right to use property, plant, or equipment meet the definition of a lease even though substantial services by the contractor (lessor) may be called for in connection with the operation or maintenance of the assets.

Accounting and Reporting by Lessees

3. All leases shall be considered operating leases. Rent on an operating lease shall be charged to expense over the lease term as it becomes payable, except as provided in paragraphs 4 and 5.

4. As discussed in FASB Technical Bulletin 85-3, Accounting for Operating Leases with Scheduled Rent Increases, the effects of scheduled rent increases normally shall be recognized on a straight-line basis over the lease term.

5. Lease agreements may also include incentives for the lessee to sign the lease, such as an up-front cash payment to the lessee, payment of costs for the lessee (such as moving expenses), or the assumption by the lessor of the lessee’s preexisting lease. As discussed in FASB Technical Bulletin 88-1, Issues Relating to Accounting for Leases: Time Pattern of the Physical Use of the Property in an Operating Lease; Lease Incentives in an Operating Lease; Applicability of Leveraged Lease Accounting to Existing Assets of the Lessor; Money-Over-Money Lease Transactions; Wrap Lease Transactions, incentives paid to or payments made on behalf of the lessee shall be considered reductions of minimum lease payments (i.e., the payments that the lessee is obligated to make or can be required to make in connection with the leased properties.) These incentives shall be recognized over the lease term on a straight-line basis unless the use of another systematic and rational allocation basis is more representative of the time pattern in which the leased property is physically employed. The lessee’s immediate recognition of expenses or losses (e.g., moving costs, losses on subleases, write-offs of leasehold improvements) shall not be changed by this guidance.
Accounting and Reporting by Lessors

6. All leases, except leveraged leases as defined in paragraph 16, shall be considered operating leases and accounted for by the lessor as follows:
   a. The leased property shall be included in the same balance sheet category it would be had the property not been leased. The property shall be depreciated following the lessor’s normal depreciation policies for such assets;
   b. Rental income shall be reported as investment income as it becomes receivable according to the provisions of the lease. However, as discussed in paragraphs 4 and 5 of this statement, rentals may be recognized before they become due, if rentals vary from the straight-line basis. The guidance in SSAP No. 34—Investment Income Due and Accrued shall be applied to the receivable balance; and
   c. Initial direct costs shall be charged to expense when incurred, and shall not be deferred and allocated over the lease term. Initial direct costs are those incremental costs that the lessor has incurred in directly evaluating, negotiating, administering, and closing a lease transaction.

7. The sale of property subject to an operating lease, or of property that is leased by or intended to be leased by the third-party purchaser to another party, shall not be treated as a sale if the seller or any party related to the seller (related party is defined in SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties (SSAP No. 25)) retains substantial risks of ownership in the leased property.

Sale-Leaseback Transactions

8. A sale-leaseback transaction involves the sale of property, plant, or equipment by the owner and a lease of the asset back to the seller. Sale-leaseback accounting, whereby the seller-lessee records the sale, removes the assets and related liabilities from its balance sheet, and accounts for the lease in accordance with the guidance in paragraphs 3-5 of this statement, shall be used by the seller-lessee for sale-leaseback transactions only if the transaction includes all of the following:
   a. A normal leaseback (see paragraph 13);
   b. Payment terms and provisions that adequately demonstrate the buyer-lessee’s initial and continuing investment in the property (see paragraph 14);
   c. Payment terms and provisions that transfer all of the other risks and rewards of ownership as demonstrated by the absence of any other continuing involvement by the seller-lessee (see paragraph 14); and
   d. Admitted assets, if the buyer-lessee is a related party, or either admitted or nonadmitted assets if the buyer-lessee is not a related party. For purposes of this paragraph, related parties include those identified in SSAP No. 25 and entities created for the purpose of buying and leasing nonadmitted assets for the reporting entity and/or its affiliates.

9. When applying sale-leaseback accounting, the sale, and gains or losses thereon, shall be recognized in accordance with the relevant statutory guidance for the asset being sold. For example, sales of real estate shall be accounted for in accordance with SSAP No. 40—Real Estate Investments, which adopts FASB Statement No. 66, Accounting for Sales of Real Estate (FAS 66).
10. If criteria a., b., or c. in paragraph 8 are not met, the sale of the asset shall be accounted for as a financing or deposit in accordance with FAS 66. If criteria 8 d. is not met, the deposit method shall be used.

11. Under the deposit method, the seller recognizes no profit or loss on the sale, does not record notes receivable, continues to report in its financial statements the property and the related existing debt even if it has been assumed by the buyer. Lease payments decrease and collections on the buyer-lessee note, if any, increase the seller-lessee deposit account. The property and related debt continue to be in the seller-lessee balance sheet, and the seller-lessee continues to depreciate the property. Also, a loss shall be recognized by the seller-lessee, if, at any reporting date, the net admitted value of the leased asset exceeds the sum of the balance in the deposit account, the fair value of the unrecorded note receivable, and any debt assumed by the buyer.

12. Under the financing method, the asset will continue to be carried as an admitted asset. The proceeds from the sale are recognized as a borrowing (liability) and equated to the present value of the leaseback rents to determine the interest rate to use to accrue interest on the debt. If there is a change in lease terms such that the sale-leaseback transaction subsequently qualifies for sale-leaseback accounting recognition, sale-leaseback accounting as described in paragraph 8 shall be applied as if the sale had been recognized at the inception of the lease. Otherwise, at the end of the lease term any deferred profit shall be recognized.

13. A normal leaseback in the context of a real estate sale-leaseback shall be defined as a lessee-lessee relationship that involves the active use of the property by the seller-lessee in consideration for payment of rent, including contingent rentals that are based on the future operations of the seller-lessee, and excludes other continuing involvement provisions.

14. A continuing involvement provision shall be defined as involvement by the seller-lessee with the leased property that result in the seller-lessee not transferring the risks or rewards of ownership to the buyer-lessee. Examples of continuing involvement are as follows:

a. The seller-lessee has an obligation or an option to repurchase the property or the buyer-lessee can compel the seller-lessee to repurchase the property;

b. The seller-lessee guarantees the buyer-lessee’s investment or a return on that investment for a limited or extended period of time;

c. The seller-lessee is required to pay the buyer-lessee at the end of the lease term for a decline in the fair value of the property below the estimated residual value on some basis other than excess wear and tear of the property levied on inspection of the property at the termination of the lease;

d. The seller-lessee provides nonrecourse financing to the buyer-lessee for any portion of the sales proceeds or provides recourse financing in which the only recourse is to the leased asset;

e. The seller-lessee is not relieved of the obligation under any existing debt related to the property;

f. The seller-lessee provides collateral on behalf of the buyer-lessee other than the property directly involved in the sale-leaseback transaction, the seller-lessee or a related party to the seller-lessee guarantees the buyer-lessee’s debt, or a related party to the seller-lessee guarantees a return of or on the buyer-lessee’s investment;
The seller-lessee’s rental payment is contingent on some predetermined or determinable level of future operations of the buyer-lessee; and

The buyer-lessee is obligated to share with the seller-lessee any portion of the appreciation of the property.

15. The buyer-lessee shall account for the purchase in accordance with applicable statutory guidance for the asset acquired and for the lease in accordance with paragraphs 6 and 7 of this statement.

Leveraged Leases for Lessors

16. Generally, leveraged leases are those in which the lessor acquires, through the incurrence of debt (such that the lessor is substantially “leveraged” in the transaction), property, plant or equipment with the intentions to lease the asset(s) to the lessee. Leveraged leases are defined as those leases that meet the criteria set forth in paragraph 42 a-d (and the related paragraphs to which 42 refers) of FASB Statement No. 13, Accounting for Leases (FAS 13). Leases which meet the preceding definition shall be accounted for in accordance with paragraphs 43-47 (and the related paragraphs to which 43-47 refer) of FAS 13. The lessor shall record its investment net of the nonrecourse debt. In cases where the asset being leased is a nonadmitted asset, any net leveraged lease asset shall be nonadmitted.

Related-Party Leases

17. This statement applies to arms-length transactions. To the extent that leases between related parties are, in substance, arms-length transactions the guidance in this statement shall be applied. The determination of whether related party leases qualify as arms-length transactions is addressed in SSAP No. 25.

Disclosures

18. The following disclosures shall be made in the financial statements of lessees:

a. A general description of the lessee’s leasing arrangements including, but not limited to, the following:

   i. Rental expense for each period for which an income statement is presented, with separate amounts for minimum rentals, contingent rentals, and sublease rentals. Rental payments under leases with terms of a month or less that were not renewed need not be included;

   ii. The basis on which contingent rental payments are determined;

   iii. The existence and terms of renewal or purchase options and escalation clauses; and

   iv. Restrictions imposed by lease agreements, such as those concerning dividends, additional debt, and further leasing.

b. For leases having initial or remaining noncancelable lease terms in excess of one year:

   i. Future minimum rental payments required as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding years; and
ii. The total of minimum rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

c. For sale-leaseback transactions:

i. A description of the terms of the sale-leaseback transaction, including future commitments, obligations, provisions, or circumstances that require or result in the seller-lessee’s continuing involvement; and

ii. For those accounted for as deposits, (a) the obligation for future minimum lease payments as of the date of the latest balance sheet presented in the aggregate and for each of the five succeeding years and (b) the total of minimum sublease rentals, if any, to be received in the future under noncancelable subleases in the aggregate and for each of the five succeeding years.

19. When leasing is a significant part of the lessor’s business activities in terms of revenue, net income, or assets, the following information with respect to leases shall be disclosed in the financial statements:

a. For operating leases:

i. The cost and carrying amount, if different, of property on lease or held for leasing by major classes of property according to nature or function, and the amount of accumulated depreciation in total as of the date of the latest balance sheet presented;

ii. Minimum future rentals on noncancelable leases as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding years;

iii. Total contingent rentals included in income for each period for which an income statement is presented; and

iv. A general description of the lessor’s leasing arrangements.

b. For leveraged leases:

i. A description of the terms including the pretax income from the leveraged leases. For purposes of presenting the investment in a leveraged lease in the lessor’s balance sheet, the amount of related deferred taxes shall be presented separately (from the remainder of the net investment);

ii. Separate presentation (from each other) shall be made of pretax income from the leveraged lease, the tax effect of pretax income, and the amount of investment tax credit recognized as income during the period; and

iii. When leveraged leasing is a significant part of the lessor’s business activities in terms of revenue, net income, or assets, the components of the net investment balance in leveraged leases shall be disclosed.

20. Refer to the preamble for further discussion regarding disclosure requirements.
Relevant Literature

21. This statement rejects FAS 13, as amended and interpreted, except for certain of the guidance on operating leases, sale-leaseback transactions and leveraged leases (i.e., paragraphs 15, 16(b, c, d), 19(a, b), 23(b, c), 36, 37, 38(b), 39(c) and, 42-47). A complete list of all FASB Statements, Interpretations and Technical Bulletins adopted and rejected in this statement is as follows:

a. *FASB Statement No. 13, Accounting for Leases*, [paragraphs 15, 16(b, c, d), 19(a, b), 23(b, c), 36, 37, 38(b), 39(c), 42-47 adopted; all other paragraphs rejected];

b. *FASB Statement No. 22, Changes in the Provisions of Lease Agreements Resulting from Refundings of Tax-Exempt Debt* (an amendment of *FASB Statement No. 13*) [rejected in its entirety];

c. *FASB Statement No. 23, Inception of the Lease* (an amendment of *FASB Statement No. 13*) [paragraph 10 adopted; all other paragraphs rejected];

d. *FASB Statement No. 27, Classification of Renewals or Extensions of Existing Sales-Type or Direct Financing Leases* (an amendment of *FASB Statement No. 13*) [rejected in its entirety];

e. *FASB Statement No. 28, Accounting for Sales with Leasebacks* (an amendment of *FASB Statement No. 13*) [adopted in its entirety, except guidance on capital leases is not applicable other than those leases that qualify as leveraged leases];

f. *FASB Statement No. 29, Determining Contingent Rentals* (an amendment of *FASB Statement No. 13*) [paragraphs 8 and 11 adopted; all other paragraphs rejected];

g. *FASB Statement No. 98, Accounting for Leases*:
   - *Sale-Leaseback Transactions Involving Real Estate*
   - *Sales-Type Leases of Real Estate*
   - *Definition of the Lease Term*
   - *Initial Direct Costs of Direct Financing Leases*
   (an amendment of *FASB Statements No. 13, 66 and 91 and a recession of FASB Statement No. 26 and Technical Bulletin No. 79-11*) [paragraphs 1-13, 17-22(a-e, j-n) adopted; all other paragraphs rejected];

h. *FASB Statement No. 109, Accounting for Income Taxes* [paragraphs 256-258 adopted; all other paragraphs addressed in *SSAP No. 10—Accounting for Income Taxes*]

i. *FASB Interpretation No. 19, Lessee Guarantee of the Residual Value of Leased Property* (an interpretation of *FASB Statement No. 13*) [rejected in its entirety];

j. *FASB Interpretation No. 21, Accounting for Leases in a Business Combination* (an interpretation of *FASB Statement No. 13*) [rejected in its entirety];

k. *FASB Interpretation No. 23, Leases of Certain Property Owned by a Governmental Unit or Authority* (an interpretation of *FASB Statement No. 13*) [rejected in its entirety];
l. FASB Interpretation No. 24, Leases Involving Only Part of a Building (an interpretation of FASB Statement No. 13) [rejected in its entirety];

m. FASB Interpretation No. 26, Accounting for Purchase of a Leased Asset by the Lessee during the Term of the Lease (an interpretation of FASB Statement No. 13) [rejected in its entirety];

n. FASB Interpretation 27, Accounting for a Loss on a Sublease (an interpretation of FASB Statement No. 13 and APB Opinion No. 30) [adopted in its entirety];

o. FASB Technical Bulletin 79-10, Fiscal Funding Clauses in Lease Agreements [rejected in its entirety];

p. FASB Technical Bulletin 79-12, Interest Rate Used in Calculating the Present Value of Minimum Lease Payments [rejected in its entirety];

q. FASB Technical Bulletin 79-13, Applicability of FASB Statement No. 13 to Current Value Financial Statements [rejected in its entirety];

r. FASB Technical Bulletin 79-14, Upward Adjustment of Guaranteed Residual Values [rejected in its entirety];

s. FASB Technical Bulletin 79-15, Accounting for Loss on a Sublease Not Involving the Disposal of a Segment [adopted in its entirety];

t. FASB Technical Bulletin 79-16(R), Effect of a Change in Income Tax Rate on the Accounting for Leveraged Leases [adopted in its entirety];

u. FASB Technical Bulletin 79-17, Reporting Cumulative Effect Adjustment from Retroactive Application of FASB Statement No. 13 [rejected in its entirety];

v. FASB Technical Bulletin 79-18, Transition Requirement of Certain FASB Amendments and Interpretations of FASB Statement No. 13 [rejected in its entirety];

w. FASB Technical Bulletin 85-3, Accounting for Operating Leases with Scheduled Rent Increases [adopted in its entirety];

x. FASB Technical Bulletin 86-2, Accounting for an Interest in the Residual Value of a Leased Asset:
   • Acquired by a Third Party or
   • Retained by a Lessor That Sells the Related Minimum Rental Payments
   [adopted in its entirety];

y. FASB Technical Bulletin 88-1, Issues Related to Accounting for Leases:
   • Time Pattern of the Physical Use of the Property in an Operating Lease
   • Lease Incentives in an Operating Lease
   • Applicability of Leveraged Lease Accounting to Existing Assets of the Lessor
• Money-Over-Money Lease Transactions
• Wrap Lease Transactions

[paragraphs 1-12 adopted; all other paragraphs rejected];

z. FASB Emerging Issues Task Force No. 85-16, Leveraged Leases [adopted in its entirety]
aa. FASB Emerging Issues Task Force No. 86-17, Deferred Profit on Sale-Leaseback Transaction with Lessee Guarantee of Residual Value [rejected in its entirety];
bb. FASB Emerging Issues Task Force No. 86-33, Tax Indemnifications in Lease Agreements [adopted in its entirety];
cc. FASB Emerging Issues Task Force No. 86-43, Effect of a Change in Tax Law or Rates on Leveraged Leases [adopted in its entirety];
dd. FASB Emerging Issues Task Force No. 87-7, Sale of an Asset Subject to a Lease and Nonrecourse Financing: "Wrap Lease Transactions" [rejected in its entirety];
ff. FASB Emerging Issues Task Force No. 88-10, Costs Associated with Lease Modification or Termination [adopted in its entirety];
gg. FASB Emerging Issues Task Force No. 88-21, Accounting for the Sale of Property Subject to the Seller's Preexisting Lease [rejected in its entirety];

hh. FASB Emerging Issues Task Force No. 89-16, Consideration of Executory Costs in Sale-Leaseback Transactions [adopted in its entirety];
ii. FASB Emerging Issues Task Force No. 90-14, Unsecured Guarantee by Parent of Subsidiary's Lease Payments in a Sale-Leaseback Transaction [adopted in its entirety];
jj. FASB Emerging Issues Task Force No. 90-15, Impact of Nonsubstantive Lessors, Residual Value Guarantees, and Other Provisions in Leasing Transactions [rejected in its entirety];

kk. FASB Emerging Issues Task Force No. 90-20, Impact of an Uncollateralized Irrevocable Letter of Credit on a Real Estate Sale-Leaseback Transaction [adopted in its entirety];
ll. FASB Emerging Issues Task Force No. 92-1, Allocation of Residual Value or First-Loss Guarantee to Minimum Lease Payments in Leases Involving Land and Building(s) [rejected in its entirety];

mm. FASB Emerging Issues Task Force No. 93-8, Accounting for the Sale and Leaseback of an Asset That Is Leased to Another Party [adopted in its entirety];
nn. FASB Emerging Issues Task Force No. 95-17, Accounting for Modifications to an Operating Lease That Do Not Change the Lease Classification [adopted in its entirety];
FASB Emerging Issues Task Force No. 96-21, Implementation Issues in Accounting for Leasing Transactions involving Special-Purpose Entities [rejected in its entirety]

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. The provisions of this statement shall be applied to all new leases entered into, or for existing leases which are renewed, on or after January 1, 2001.

Foreign Currency Transactions and Translations

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for accounting for foreign currency transactions and translations.

SUMMARY CONCLUSION

2. A foreign currency transaction is a transaction denominated in a currency other than the reporting entity’s functional currency. The reporting entity’s functional currency is defined as the currency of the primary economic environment in which the reporting entity operates. Foreign currency translation is the translation of financial statements, denominated in the reporting entity’s functional currency, into U.S. dollars prior to their incorporation into financial statements through consolidation or the equity method of accounting.

3. For the purposes of this statement, a U.S. domiciled reporting entity’s reporting currency shall be defined as the U.S. dollar, regardless of the primary economic environment in which the reporting entity operates. In order to ensure consistency, all elements of statutory financial statements shall be reported in U.S. dollars.

4. Each foreign currency transaction shall be examined and a determination made if the foreign currency transaction was made in support of insurance operations denominated in the same foreign currency. For example, some reporting entities engage in insurance operations in foreign countries with the premiums collected and claims paid in local currency. As in any insurance operation there will at times be uncollected premiums, policy reserves, unpaid claims, and other incomplete transactions that must be recorded in the reporting entity’s balance sheet. Premiums, reserves, and claims normally are recorded in U.S. dollars at the rate of exchange that is in effect at the time the policy is written, or when the claim is incurred. Changes in exchange rates, while not affecting the foreign policyholder, do affect the value of the foreign business as it is recorded in U.S. dollars.

5. Foreign currency transactions made in support of insurance operations denominated in the same foreign currency, such as foreign branches, shall be accounted for as follows:

   a. Canadian Insurance Operations—Canadian insurance operations, resulting in less than 10% of the reporting entity’s admitted assets, less than 10% of the reporting entity’s liabilities and less than 10% of the reporting entity’s net premium, can be translated to U.S. dollars by making an adjustment to the net assets of the foreign operation. The adjustment is calculated by summarizing the assets and liabilities in the foreign currency and in U.S. dollars. The net value is converted to U.S. dollars at the current rate of exchange and compared with the net value in U.S. dollars recorded by the reporting entity. Any difference in the net value to current exchange rates is recorded as a separate asset or liability and the change in the foreign exchange adjustment is recorded as an unrealized capital gain or loss;

   b. All Other Foreign Insurance Operations—All other foreign insurance operations must be translated to U.S. dollars as follows: each financial statement line shall be translated to U.S. dollars by applying the following exchange rates: (i) for assets and liabilities, the exchange rate at the balance sheet date shall be used and (ii) for revenues, expenses, gains, losses and surplus adjustments, the exchange rate at the dates on which those elements are recognized shall be used. Because translation at the exchange rates at the dates the numerous revenues, expenses, gains, losses and surplus adjustments are
recognized is generally impractical, an appropriately weighted average exchange rate for the period may be used to translate those elements. Gains or losses due to translating foreign operations to U.S. dollars shall be recorded as unrealized capital gains or losses.

6. All other foreign currency transactions shall be accounted for as follows:

a. Assets and liabilities denominated in foreign currencies shall be accounted for at their U.S. dollar equivalent values using exchange rates at the balance sheet date. Income and expenses recognized during an accounting period shall be recorded at an appropriately weighted average exchange rate;

b. Changes in balance sheet asset and liability values due to fluctuations in foreign currency exchange rates shall be recorded as unrealized capital gains and losses until the asset is sold or exchanged or the liability is settled. Upon settlement, previously recorded unrealized capital gains and losses shall be reversed and the foreign exchange profit or loss for the entire holding period shall be recorded as a realized capital gain or loss;

c. Transactions involving settlement in cash, such as purchases, payment of expenses, sales, and receipt of income, shall be recorded at their U.S. dollar equivalent value based on the foreign currency exchange rate as of the transaction date. Any foreign currency exchange gains or losses on purchases, payment of expenses, sales, maturities or changes in income or expense accruals shall be recorded as a capital gain or loss realized on the purchase, sale or maturity.

7. Nominal information such as par value of investments may be expressed in the foreign currency or U.S. dollar equivalent (description of issue), but where the information is displayed comparatively (column of par values), U.S. dollar equivalent amount shall be used. The U.S. dollar equivalent amount is translated utilizing the exchange rate at the balance sheet date. Ratios and factors shall be based on data that is entirely consistent with respect to currency.

8. A currency in a highly inflationary environment (one that has cumulative inflation of approximately 100% or more over a three year period) is not considered stable enough to serve as a functional currency and the more stable currency of the reporting parent is to be used instead. If a reporting entity’s books of record are not maintained in its functional currency, remeasurement into the functional currency is required. That remeasurement is required before translation into the reporting currency. The remeasurement process is intended to produce the same result as if the reporting entity’s books of record had been maintained in the functional currency. The remeasurement of and subsequent accounting for transactions denominated in a currency other than the functional currency shall be recognized as a realized gain or loss in the statement of operations.

Generally Accepted Accounting Principles

RELEVANT ISSUE PAPERS
Discontinued Operations and Extraordinary Items

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles related to the accounting and reporting for the effects of the disposal of a segment of a business and extraordinary items.

SUMMARY CONCLUSION

Definitions

2. The following definitions shall apply:
   a. "Discontinued operations" shall be defined as the operations of a segment of a business that has been sold, abandoned, spun off, or otherwise disposed of or, although still operating, is the subject of a formal plan for disposal;
   b. A "segment" of a business shall be defined as a component of an entity, likely in the form of a subsidiary, whose activities represent a separate major type of business or class of customer. The assets, results of operations, and activities of a segment must be clearly distinguished, physically and operationally and for financial reporting purposes, from the other assets, results of operations, and activities of the entity. The fact that the results of operations of the segment being sold or abandoned cannot be separately identified strongly suggests that the transaction should not be classified as the disposal of a segment of the business. The disposal of a segment of a business shall be distinguished from other disposals of assets incident to the evolution of the entity’s business, such as the disposal of a line of business or the shifting of marketing activities from one location to another;
   c. "Measurement date" shall be defined as the date on which management having authority to approve the action commits itself to a formal plan to dispose of a segment of the business, whether by sale or abandonment. The plan, at a minimum, should include identification of the major assets to be disposed of, the expected method of disposal, the period expected to be required for completion of the disposal, an active program to find a buyer if disposal is to be by sale, the estimated results of operations of the segment from the measurement date to the disposal date (defined below), and the estimated proceeds or salvage to be realized by disposal;
   d. "Disposal date" shall be defined as the date of closing the sale if the disposal is by sale or the date that operations cease if the disposal is by abandonment;
   e. "Extraordinary items" shall be defined as those events or transactions which meet both of the following criteria:
      i. Unusual nature—the underlying event or transaction possesses a high degree of abnormality and is clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the reporting entity, taking into account the environment in which the reporting entity operates; and
      ii. Infrequency of occurrence—the underlying event or transaction would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the reporting entity operates.
Discontinued Operations

3. If a loss is expected from the proposed sale or abandonment of a segment of business, the estimated loss shall be accrued at the measurement date, as defined in paragraph 2 above. If a gain is expected, it shall be recognized when realized, which ordinarily is the disposal date. This accounting is consistent with the accounting provided for in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets.

4. The determination of whether a gain or loss results from the disposal shall be made at the measurement date based on estimates at that date of the net realizable value of the segment after giving consideration to any estimated costs and expenses directly associated with the disposal and, if a plan of disposal is to be carried out over a period of time and contemplates continuing operations during that period, to any estimated income or losses from operations. If it is expected that net losses from operations will be incurred between the measurement date and the expected disposal date, the computation of the gain or loss on disposal shall also include an estimate of such amounts. If it is expected that net income will be generated from operations during that period the computation shall include the estimated net income, limited however to the amount of any loss otherwise recognizable for the disposal, with any remainder accounted for when realized. Any changes in the original estimate shall be accounted for in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

5. The results of a reporting entity’s discontinued operations shall be reported consistently with the entity’s reporting of continuing operations (i.e., no separate line item presentation in the balance sheet or statement of operations aggregating current and future losses from the measurement date).

6. Additionally, the financial statements for the period encompassing the measurement date and the year subsequent shall contain the following:
   a. The identity of the segment of business that has been or will be discontinued;
   b. The expected disposal date, if known (see definition in paragraph 2 above);
   c. The expected manner of disposal;
   d. A description of the remaining assets and liabilities of the segment at the balance sheet date; and
   e. The amounts related to the discontinued operations and the effect on the financial statements, including the balance sheet and income statement line items which have been affected.

7. If material revisions are made to the estimates of the cost to dispose of a segment in years subsequent to the disclosure required in paragraph 6 above, the nature and the effect of the revisions to the estimates shall be disclosed for the period in which the revision was made including the effect on income or loss from operations and the effect on the carrying amount of the remaining assets and liabilities of the segment at the balance sheet date.
Extraordinary Items

8. Extraordinary items, as defined in paragraph 2 above, shall be reported consistently with the reporting entity's reporting of continuing operations (i.e., no separate line item presentation in the balance sheet or statement of operations). Such items shall not be charged directly to surplus unless specifically addressed elsewhere within the codification.

9. The nature of an extraordinary event or transaction and the principal items entering into the determination of an extraordinary gain or loss shall be disclosed in the financial statements. This disclosure shall include the line items which have been affected by the estimate of the extraordinary item.

10. Material events or transactions that are either unusual or occur infrequently, but not both, are not considered extraordinary items. However, such material events or transactions shall be disclosed in the financial statements.

Disclosures

11. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

12. This statement adopts the accounting principles relating to the accounting for the disposal of a segment of a business included in Accounting Principles Board Opinion No. 30, Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions, (APB No. 30), paragraphs 13 through 18 and adopts the definition of an extraordinary item included in paragraph 20 of APB 30. This statement also adopts AICPA Accounting Interpretations, Reporting the Results of Operations: Accounting Interpretations of APB Opinion No. 30, relating to the definition of extraordinary items and terminology relevant to the disposal of a segment and the criteria for recording a related loss. This statement also adopts FASB Emerging Issues Task Force No. 85-36, Discontinued Operations with Expected Gain and Interim Operating Losses.

13. This statement rejects all other paragraphs of APB 30 and all other interpretations of APB 30 relating to the accounting and reporting of discontinued operations, extraordinary items and unusual or infrequently occurring events and transactions. This statement rejects FASB Emerging Issues Task Force No. 94-3, Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs Incurred in a Restructuring), and FASB Emerging Issues Task Force No. 95-18, Accounting and Reporting for a Discontinued Business Segment When the Measurement Date Occurs after the Balance Sheet Date but before the Issuance of Financial Statements.

Effective Date and Transition

14. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties

SCOPE OF STATEMENT

1. Related party transactions are subject to abuse because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny. This statement establishes statutory accounting principles and disclosure requirements for related party transactions.

SUMMARY CONCLUSION

2. Related parties are defined as entities that have common interests as a result of ownership, control, affiliation or by contract. Related parties shall include but are not limited to the following:
   a. Affiliates of the reporting entity, as defined in paragraph 3;
   b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;
   c. The principal owners of the reporting entity;
   d. The management of the reporting entity, its parent or affiliates (including directors);
   e. Members of the immediate families of principal owners and management of the reporting entity, its parent or affiliates and their management;
   f. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;
   g. A party which can, directly or indirectly, significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;
   h. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;
   i. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and

3. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and partnerships, joint ventures, and limited liability companies. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.
4. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of a person or entity, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

5. The 10% ownership threshold shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in a company and a second member of the group has an 8% interest in the same company, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. These presumptions can be overcome by predominant evidence to the contrary. However, they shall stand until overcome by such predominant contradictory evidence. A reporting entity with 10% or more of the voting interest shall evaluate all facts and circumstances relating to the investment and reach a judgment about whether the presumption of control is overcome. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting interest of an investee.

Related Party Loans

6. Loans or advances (including debt, public or private) made by a reporting entity to its parent or principal owner shall be admitted if approval for the transaction has been obtained from the domiciliary commissioner and the loan or advance is determined to be collectible based on the parent or principal owner's independent payment ability. An affiliate's ability to pay shall be determined after consideration of the liquid assets or revenues available from external sources (i.e., determination shall not include dividend paying ability of the subsidiary making the loan or advance) which are available to repay the balance and/or maintain its account on a current basis. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5—Definition of Liabilities, Loss Contingencies and Impairments of Assets (SSAP No. 5), it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

7. Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm's-length transactions as defined in paragraph 10. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner) that are economic transactions as defined in paragraph 10 shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

8. Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month's payment shall be nonadmitted assets.

9. Indirect loans are loans or extensions of credit to any person who is not an affiliate, where the reporting entity makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the reporting entity making the loans or extensions of credit. The admissibility of indirect loans made by a reporting entity for the benefit of its parent or principal owner shall be determined in accordance with the guidelines in
paragraph 6. Indirect loans or advances made for the benefit of all other related parties shall be evaluated and accounted for consistent with loans or advances to related parties as described in paragraphs 7 and 8.

Transactions Involving the Exchange of Assets or Liabilities

10. An arm’s-length transaction is defined as a transaction in which willing parties, each being reasonably aware of all relevant facts and neither under compulsion to buy, sell, or loan, would be willing to participate. A transaction between related parties involving the exchange of assets or liabilities shall be designated as either an economic transaction or non-economic transaction. An economic transaction is defined as an arm’s-length transaction which results in the transfer of the risks and rewards of ownership and represents a consummated act thereof, i.e., “permanence.” The appearance of permanence is also an important criterion in assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed. If subsequent events or transactions reverse the effect of an earlier transaction prior to the issuance of the financial statements, the reversal shall be considered in determining whether economic substance existed in the case of the original transaction. Subsequent events are addressed in SSAP No. 9—Subsequent Events. An economic transaction must represent a bonafide business purpose demonstrable in measurable terms. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction. The statutory accounting shall follow the substance, not the form of the transaction.

11. In determining whether there has been a transfer of the risks and rewards of ownership in the transfer of assets or liabilities between related parties, the following—and any other relevant facts and circumstances related to the transaction—shall be considered:

   a. Whether the seller has a continuing involvement in the transaction or in the financial interest transferred, such as through the exercise of managerial authority to a degree usually associated with ownership;

   b. Whether there is an absence of significant financial investment by the buyer in the financial interest transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer;

   c. Whether repayment of debt that constitutes the principal consideration in the transaction is dependent on the generation of sufficient funds from the asset transferred;

   d. Whether limitations or restrictions exist on the buyer’s use of the financial interest transferred or on the profits arising from it;

   e. Whether there is retention of effective control of the financial interest by the seller.

12. A transaction between related parties may meet the criteria for treatment as an economic transaction at one level of financial reporting, but may not meet such criteria at another level of financial reporting. An example of such a transaction is a reporting entity purchasing securities at market value from an affiliated reporting entity that carried the securities at amortized cost. This transaction meets the criteria of an economic transaction at this level of financial reporting, and therefore, the selling reporting entity would record a gain and the acquiring reporting entity would record the securities at their cost (market value on the transaction date). At the common parent level of reporting, this transaction has resulted in the mere inflation of surplus, and therefore, is a non-economic transaction. The parent reporting entity shall defer the net effects of any gain or increase in surplus resulting from such transactions by recording a deferred gain and an unrealized loss. The deferred gain shall not be
recognized by the parent reporting entity unless and until arms-length transaction(s) with independent third parties give rise to appropriate recognition of the gain.

13. A non-economic transaction is defined as any transaction that does not meet the criteria of an economic transaction. Similar to the situation described in paragraph 12, transfers of assets from a parent reporting entity to a subsidiary, controlled or affiliated entity shall be treated as non-economic transactions at the parent reporting level because the parent has continuing indirect involvement in the assets.

14. When accounting for a specific transaction, reporting entities shall use the following valuation methods:

a. Economic transactions between related parties shall be recorded at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus (see paragraph 12);

b. Non-economic transactions between reporting entities, which meet the definition of related parties above, shall be recorded at the lower of existing book values or fair values at the date of the transaction;

c. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or it’s affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified;

d. Transactions which are designed to avoid statutory accounting practices shall be reported as if the reporting entity continued to own the assets or to be obligated for a liability directly instead of through a subsidiary.

Examples of transactions deemed to be non-economic include, security swaps of similar issues between or among affiliated companies, and swaps of dissimilar issues accompanied by exchanges of liabilities between or among affiliates.

Transactions Involving Services

15. Transactions involving services being provided by a related party may not be arm’s-length. Amounts charged for services provided may not be at current market rates for such services or may be based on allocations of costs. Determining market rates for services is difficult because the circumstances surrounding each transaction are unique. Unlike transactions involving the exchange of assets and liabilities between related parties, transactions for services create income on one party’s books and expense on the second party’s books, and therefore, do not lend themselves to the mere inflation of surplus. These arrangements may be subject to regulatory approval.

16. Transactions involving services provided between related parties shall be recorded at the amount charged. Regulatory scrutiny of related party transactions where amounts charged for services do not meet the fair and reasonable standard established by Appendix A-440, may result in (a) amounts charged being recharacterized as dividends or capital contributions, (b) transactions being reversed, (c) receivable balances being nonadmitted, or (d) other regulatory action. Expenses that result from cost allocations shall be allocated subject to the same fair and reasonable standards, and the books and records of each
party shall disclose clearly and accurately the precise nature and details of the transaction. See SSAP No. 70—Allocation of Expenses for additional discussion regarding the allocation of expenses.

Disclosures

17. The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

a. The nature of the relationships involved;

b. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

i. Date of transaction;

ii. Explanation of transaction;

iii. Name of reporting entity;

iv. Name of affiliate;

v. Description of assets received by reporting entity;

vi. Statement value of assets received by reporting entity;

vii. Description of assets transferred by reporting entity; and

viii. Statement value of assets transferred by reporting entity.

c. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period;

d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement;

e. Any guarantees or undertakings, written or otherwise, for the benefit of an affiliate or related party which result in a material contingent exposure of the reporting entity's or any related party’s assets or liabilities;

f. A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party. This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements, and agency contracts, which remove assets otherwise recordable (and potentially nonadmitted) on the reporting entity’s financial statements;
The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity significantly different from those that would have been obtained if the enterprises were autonomous. The relationship shall be disclosed even though there are no transactions between the enterprises; and

The amount deducted from the value of an upstream intermediate entity or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated entity, in accordance with the NAIC Purposes and Procedures of the Securities Valuation Office, “Procedures for Valuing Common Stocks and Stock Warrants.”

18. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

19. This statement adopts FASB Statement No. 57, Related Party Disclosures with a modification to paragraph 2 to require disclosure of compensation arrangements, expense allowances, and other similar items in the ordinary course of business.

20. This statement rejects AICPA Accounting Interpretations, Business Combinations: Accounting Interpretations of APB Opinion No. 16, #39, “Transfers and Exchanges Between Companies Under Common Control”.

Effective Date and Transition

21. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Bonds, excluding Loan-backed and Structured Securities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for bonds, excluding loan-backed and structured securities.

SUMMARY CONCLUSION

2. Bonds shall be defined as any securities representing a creditor relationship, whereby there is a fixed schedule for one or more future payments. This definition includes U.S. Treasury securities, U.S. government agency securities, municipal securities, corporate bonds, bank participations, convertible debt, certificates of deposit and commercial paper that have a fixed schedule of payments and a maturity date in excess of one year from the date of acquisition. Loan-backed and structured securities meet this definition, but are excluded from the scope of this statement, and are addressed in SSAP No. 43—Loan-backed and Structured Securities. Securities which meet the definition above, but have a maturity date of one year or less from the date of acquisition are addressed in SSAP No. 2—Cash, Drafts, and Short-term Investments. Mortgage loans and other real estate lending activities made in the ordinary course of business meet the definition above, but are not addressed in this statement. These types of transactions are addressed in SSAP No. 37—Mortgage Loans and SSAP No. 39—Reverse Mortgages.

3. Bonds meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets, and are admitted assets to the extent they conform to the requirements of this statement.

Acquisitions and Sales

4. A bond acquisition or disposal shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement bonds which shall be recorded on the funding date. At acquisition, bonds shall be reported at their cost, including brokerage and other related fees, which cannot exceed the fair market value at the date of acquisition.

5. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses on sales of bonds shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an IMR, realized gains and losses on sales of bonds shall be reported as net realized capital gains or losses in the statement of income.

Amortized Cost

6. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond. Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer’s discretion) shall be amortized to the call or maturity value/date which produces the lowest asset value (yield to worst).
Balance Sheet Amount

7. Bonds shall be valued and reported in accordance with the NAIC *Valuations of Securities* manual prepared by the Securities Valuation Office (Valuations of Securities manual). For reporting entities that maintain an Asset Valuation Reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair market value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; with all other bonds (NAIC designations 3 to 6) reported at the lower of amortized cost or fair market value.

Impairment

8. If it is determined that a decline in the fair market value of a bond is other than temporary, the cost basis of the bond shall be written down to fair market value as a new cost basis and the amount of the write down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in fair market value. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition. A decline in fair market value which is other than temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value (i.e., amortized cost).

Income

9. Interest income for any period consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of bonds, and the addition of discount accrual. In accordance with *SSAP No. 34—Investment Income Due and Accrued*, investment income shall be reduced for amounts which have been determined to be uncollectible. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

10. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

Origination Fees

11. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction such as the private placement of bonds. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the bond consistent with paragraph 6 of this statement. Other origination fees shall be recorded as income upon receipt.

Origination, Acquisition, and Commitment Costs

12. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the bond, consistent with paragraph 4 of this statement. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase or commitment to purchase bonds shall be charged to expense when incurred.
Commitment Fees

13. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the bond is issued. If the bond is not issued then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

14. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 6 of this statement over the life of the bond as an adjustment to the investment income on the bond. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Exchanges and Conversions

15. If a bond is exchanged or converted into other securities, the fair value of the bond surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. However, if the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the bond surrendered, then it shall become the cost basis for the new securities.

Disclosures

16. The financial statements shall include the following disclosures:

a. Fair values in accordance with SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments (SSAP No. 27);

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. The basis at which the bonds are stated; and

d. Amortization method.

17. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraphs 16 a. and 16 b. above shall be included in the annual audited statutory financial reports only.

Relevant Literature

18. This statement adopts AICPA Statement of Position 90-11, Disclosure of Certain Information by Financial Institutions About Debt Securities Held as Assets, and AICPA Practice Bulletin No. 4, Accounting for Foreign Debt/Equity Swaps.

19. This statement rejects the GAAP guidance for debt securities, which is contained in FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities, FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases, FASB Emerging Issues Task Force No. 89-18, Divestitures of Certain Investment Securities to an Unregulated Commonly Controlled Entity under FIRREA, and FASB

Effective Date and Transition

20. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for disclosure of information about financial instruments with off-balance-sheet risk, financial instruments with concentration of credit risk and for disclosures about the fair value of financial instruments.

SUMMARY CONCLUSION

2. A financial instrument shall be defined as cash, evidence of an ownership interest in an entity, or a contract that both:

   a. Imposes on one entity a contractual obligation (i) to deliver cash or another financial instrument to a second entity or (ii) to exchange other financial instruments on potentially unfavorable terms with the second entity; and

   b. Conveys to that second entity a contractual right (i) to receive cash or another financial instrument from the first entity or (ii) to exchange other financial instruments on potentially favorable terms with the first entity.

3. Examples of the financial instruments, which encompass both assets and liabilities recognized and not recognized in the financial statement, to which this statement applies include, but are not limited to, short-term investments, bonds, common stocks, preferred stocks, mortgage loans, derivatives, financial guarantees written, standby letters of credit, notes payable and deposit-type contracts.

4. For financial instruments with off-balance-sheet risk, except as noted in paragraphs 14 and 15 of FASB Statement No. 105, Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk (FAS 105), a reporting entity shall disclose in the financial statements the following information by class of financial instrument:

   a. The face or contract amount (or notional principal amount if there is no face or contract amount); and

   b. The nature and terms, including, at a minimum, a discussion of (i) the credit and market risk of those instruments, (ii) the cash requirements of those instruments, and (iii) the related accounting policy pursuant to the requirements of APB Opinion No. 22, Disclosure of Accounting Policies.

5. Additional disclosures related to derivatives are addressed in SSAP No. 31—Derivative Instruments (SSAP No. 31).

Disclosure of Credit Risk of Financial Instruments with Off-Balance-Sheet Credit Risk

6. For financial instruments with off-balance-sheet credit risk, except as noted in paragraphs 14 and 15 of FAS 105, an entity shall disclose in the financial statements the following information by class of financial instrument:
a. The amount of accounting loss the entity would incur if any party to the financial instrument failed completely to perform according to the terms of the contract and the collateral or other security, if any, for the amount due proved to be of no value to the entity; and

b. The entity’s policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity’s access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.

**Disclosure of Concentrations of Credit Risk of All Financial Instruments**

7. Except as noted in paragraph 14 of FAS 105, a reporting entity shall disclose all significant concentrations of credit risk arising from all financial instruments whether from an individual or group. Group concentrations of credit risk exist if a number of individuals or groups are engaged in similar activities and have similar economic characteristics that would cause their ability to meet contractual obligations to be similarly affected by changes in economic or other conditions. The following shall be disclosed in the financial statements about each significant concentration:

   a. Information about the (shared) activity, region, or economic characteristic that identifies the concentration;

   b. The amount of the accounting loss due to credit risk the entity would incur if parties to the financial instruments that make up the concentration failed completely to perform according to the terms of the contracts and the collateral or other security, if any, for the amount due proved to be of no value to the entity; and

   c. The entity’s policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity’s access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.

**Disclosures about Fair Value of Financial Instruments**

8. A reporting entity shall disclose in the notes to the financial statements the aggregate fair value of all financial instruments, summarized by type of financial instrument, for which it is practicable to estimate fair value, except for certain financial instruments named in paragraph 8 of *FASB Statement No. 107, Disclosures about Fair Value of Financial Instruments* (FAS 107). Fair value disclosed in the notes shall be presented together with the related admitted values in a form that makes it clear whether the fair values and admitted values represent assets or liabilities and to which line items in the Statement of Assets, Liabilities, Surplus and Other Funds they relate. Separate disclosure of this information in the notes is required even if such information is presented elsewhere in the financial statements. Unless specified otherwise in another SSAP the disclosures may be made net of encumbrances, if the asset or liability is so reported. A reporting entity shall also disclose the method(s) and significant assumptions used to estimate the fair value of financial instruments. For example, the notes should specify the reported value of investments using market prices published by the NAIC Securities Valuation Office (SVO).
9. For purposes of this statement, the fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. Market values published by the SVO, if available, shall always be the fair value amount disclosed. In the absence of SVO published market values, or when amortized cost is used by the SVO as market value, quoted market prices by other third party organizations, if available, shall be used as the fair value of financial instruments. If neither SVO published market values nor quoted market prices are available, management's best estimate of fair value shall be based on the quoted market price of a financial instrument with similar characteristics, or on industry recognized valuation techniques (for example, the present value of estimated future cash flows using a discount rate commensurate with the risks involved).

10. If it is not practicable for an entity to estimate the fair value of a financial instrument or a class of financial instruments, the following shall be disclosed:

   a. Information pertinent to estimating the fair value of that financial instrument or class of financial instruments, such as the carrying amount, effective interest rate, and maturity; and

   b. The reasons why it is not practicable to estimate fair value.

Annual and Quarterly Disclosure Requirements

11. Refer to the preamble for further information regarding disclosure requirements. The disclosures in paragraphs 7, 8, and 10 above shall be included in the annual audited statutory financial reports only.

Relevant Literature

12. This statement adopts the provisions of FAS 105 with the following modifications:

   a. The disclosures required in paragraph 17 of FAS 105 shall distinguish between derivatives entered into for hedging purposes and for other than hedging purposes.

   b. Paragraph 19 of FAS 105 is rejected. It addresses voluntary disclosures not required by this statement.

13. This statement adopts FAS 107 as amended by FASB Statement No. 119, Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments (FAS 119), except that paragraph 15(c) of FAS 119 relating to disclosure of financial instruments held or issued for trading is rejected and FASB Emerging Issues Task Force No. 85-20, Recognition of Fees for Guaranteeing a Loan. In addition, this statement rejects FASB Statement No. 126, Exemptions from Certain Required Disclosures about Financial Instruments for Certain Nonpublic Entities, an amendment of FAS 107. Furthermore, this statement requires that if the SVO publishes a market value, that amount shall be used in the fair value disclosures required by this statement. FAS 119 is addressed in SSAP No. 31.

14. Paragraph 8 of FAS 107 discusses financial instruments which are exempt from fair value disclosure. Included as exempt instruments are insurance contracts, except for financial guaranty contracts.
Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001.

Nonmonetary Transactions

Status

Type of Issue: Common Area
Issued: Initial Draft
Effective Date: January 1, 2001
Affects: No other pronouncements
Affected by: No other pronouncements
Nonmonetary Transactions

SCOPE OF STATEMENT

1. This statement establishes general statutory accounting principles for nonmonetary transactions. Specific statutory requirements for certain types of nonmonetary transactions are addressed in other statements.

SUMMARY CONCLUSION

2. The definitions of certain terms used in this statement are:
   a. Monetary assets and liabilities are assets and liabilities whose amounts are fixed in terms of units of currency by contract or otherwise. Examples are cash; amounts due from agents, brokers, and intermediaries; policy loans; accounts payable; and other amounts receivable or payable in cash;
   b. Nonmonetary assets and liabilities are assets and liabilities other than monetary ones. Examples are common stocks; furniture, fixtures, and equipment; real estate and liabilities for rent collected in advance;
   c. Exchange (or exchange transaction) is a reciprocal transfer between a reporting entity and another entity that results in the reporting entity acquiring assets or services or satisfying liabilities by surrendering other assets or services or incurring other obligations;
   d. Nonreciprocal transfer is a transfer of assets or services in one direction, either from a reporting entity to its owners (whether or not in exchange for their ownership interests) or another entity, or from owners or another entity, to the reporting entity. An insurance company’s reacquisition of its outstanding stock is an example of a nonreciprocal transfer.

3. Except as addressed in other statements (including, but not limited to, SSAP No. 12—Employee Stock Ownership Plans, SSAP No. 13—Stock Option and Stock Purchase Plans, SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties (SSAP No. 25), SSAP No. 68—Business Combinations and Goodwill, and SSAP No. 72—Surplus and Quasi-reorganizations), nonmonetary transactions shall be accounted for in accordance with Accounting Principles Board Opinion No. 29, Accounting for Nonmonetary Transactions (APB 29). The accounting for such transactions shall be based on the fair values of the assets (or services) involved, as defined in paragraph 25 of APB 29.

4. In a reciprocal transfer, the fair value of the asset surrendered shall be used to measure the cost of the assets received unless the fair value of the asset received is more clearly evident.

5. A nonmonetary asset received in a nonreciprocal transfer shall be recorded at the fair value of the asset received. A nonmonetary asset transferred to a stockholder or other entity in a nonreciprocal transfer shall be accounted for at the fair value of the asset transferred and a gain or loss on disposition of the asset recognized for the difference, if any, between fair value and carrying value of the asset transferred.

6. Fair value of assets received or transferred in a nonreciprocal transfer shall be measured based on statutory accounting principles for the type of asset transferred. Accordingly, the value shall be
determined in accordance with SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities, SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities), SSAP No. 32—Investments in Preferred Stock (excluding investments in preferred stock of subsidiary, controlled, or affiliated entities), SSAP No. 37—Mortgage Loans, SSAP No. 39—Reverse Mortgages, SSAP No. 40—Real Estate Investments, SSAP No. 43—Loan-backed and Structured Securities or other applicable statement. The guidance provided in SSAP No. 25 shall be followed in accounting for nonreciprocal transactions.

7. Stock received in the form of a stock dividend or stock split shall not result in the recognition of income. The cost basis of stock held shall be reallocated ratably to the total shares held after receipt of the stock dividend or stock split.

8. Involuntary conversions of nonmonetary assets to monetary assets (for example, as a result of total or partial destruction, theft, seizure, or condemnation) are monetary transactions for which gain or loss shall be recognized even though a reporting entity reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets. In some cases, a nonmonetary asset may be destroyed or damaged in one accounting period, and the amount of monetary assets to be received is not determinable until a subsequent accounting period. In those cases, gain or loss shall be recognized in accordance with the conclusions in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5). Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets shall be reported consistently with the reporting entity’s reporting of continuing operations and disclosed in the notes to financial statements in accordance with SSAP No. 24—Discontinued Operations and Extraordinary Items (SSAP No. 24).

Disclosures

9. A reporting entity that engages in a nonmonetary transaction during a period shall disclose the following in the financial statements:

   a. The nature of the transaction;

   b. The basis of accounting for the assets transferred; and

   c. Gains or losses recognized on transfers.

10. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure in paragraph 9 above shall be included in the annual audited statutory financial reports only.

Relevant Literature

11. This statement adopts APB 29, FASB Emerging Issues Task Force No. 86-29, Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value, and FASB Emerging Issues Task Force No. 93-11, Accounting for Barter Transactions Involving Barter Credits.

12. This statement adopts Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, “Chapter 7, Capital Accounts, Section B—Stock Dividends and Stock Split-ups,” paragraphs 1 through 9, as it relates to the receipt of stock in the form of a stock dividend or stock split.

13. This statement adopts FASB Interpretation No. 30, Accounting for Involuntary Conversions of Nonmonetary Assets to Monetary Assets with modification to provide that gain or loss contingencies be recognized in accordance with SSAP No. 5, and that gain or loss resulting from an involuntary
conversion of nonmonetary assets to monetary assets be accounted for in continuing operations and disclosed in accordance with SSAP No. 24.

14. This statement rejects paragraph 16 of Accounting Principles Board Opinion No. 6, Status of Accounting Research Bulletins and Emerging Issues Task Force No. 96-4, Accounting for Reorganizations Involving a Non-Pro Rata Split-off of Certain Nonmonetary Assets to Owners.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Prepaid Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the accounting for prepaid expenses. This statement does not address accounting for deferred policy acquisition costs and other underwriting expenses, income taxes, and guaranty fund assessments.

SUMMARY CONCLUSION

2. A prepaid expense is an amount which has been paid in advance of receiving future economic benefits anticipated by the payment. Prepaid expenses generally meet the definition of assets in SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4). Such expenditures also meet the criteria defining nonadmitted assets as specified in SSAP No. 4 (i.e., the assets are not readily available to satisfy policyholder obligations). Prepaid expenses shall be reported as nonadmitted assets and charged against unassigned funds (surplus). They shall be amortized against net income as the estimated economic benefit expires.

3. In accordance with the reporting entity’s capitalization policy, immaterial prepaid expenses may be expensed when purchased.

Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)  

SCOPE OF STATEMENT  

1. This statement establishes statutory accounting principles for common stocks.  

2. Investments in common stock of subsidiaries, controlled or affiliated entities (investments in affiliates) are not within the scope of this statement. They are addressed in SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities.  

SUMMARY CONCLUSION  

3. Common stocks (excluding investments in affiliates) are securities which represent a residual ownership in a corporation and shall include:  

   a. Publicly traded common stocks;  
   b. Master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York, American, or NASDAQ exchanges;  
   c. Publicly traded common stock warrants;  
   d. Shares of mutual funds, except for certain money market funds and Class I Bond Funds as designated in the NAIC Purposes and Procedures of the Securities Valuation Office (Purposes and Procedures of the SVO), regardless of the types or mix of securities owned by the fund, e.g., bonds, stocks, money market instruments, or other type of investments;  
   e. Common stocks that are not publicly traded; and  
   f. Common stocks that are restricted as to transfer of ownership. Restricted stock shall be defined as a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral), except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.  

4. Common stocks meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.  

Acquisitions and Sales  

5. At acquisition, common stocks shall be reported at their cost, including brokerage and other related fees. Cost shall not exceed market value. Common stock acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.  

6. A reporting entity can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Common stock acquired under a subscription represents a conditional transaction in a security authorized for issuance but not yet actually issued. Such transactions are settled if and when the actual security is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to
be settled. Common stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the security and the security is recorded in the name of the reporting entity or its nominee (i.e., the accounting for such common stock acquisitions shall be on the settlement date).

**Balance Sheet Amount**

7. Investments in common stocks shall be valued and reported in accordance with the NAIC *Purposes and Procedures of the Securities Valuation Office*, “Procedures for Valuing Common Stocks and Stock Warrants.” In those instances where fair market value is not available from the SVO, it is the responsibility of management to determine market value based on analytical or pricing mechanisms.

8. For reporting entities required to maintain an Asset Valuation Reserve (AVR), the accounting for unrealized capital gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus.

**Impairment**

9. For any decline in the fair value of a common stock which is determined to be other than temporary, the common stock shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. For those reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7. Subsequent fluctuations in market value shall be recorded as unrealized gains or losses. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. A decline in fair value which is other than temporary includes situations where a reporting entity has made a decision to sell a security at an amount below its carrying value (association value).

**Income**

10. Dividends on common stock shall be recorded as investment income on the ex-dividend date with a corresponding receivable to be extinguished upon receipt of cash (i.e., dividend income shall be recorded on stocks declared to be ex-dividends on or prior to the statement date).

11. For reporting entities required to maintain an AVR, the accounting for realized capital gains and losses on sales of common stock shall be in accordance with SSAP No. 7. For reporting entities not required to maintain an AVR, realized gains and losses on sales of common stock shall be reported as realized gains/losses in the statement of operations.

**Stock Splits, Stock Dividends, Payment in Kind Dividends, and Stock Exchanges**

12. Stock splits, stock dividends, payment in kind dividends, and stock exchanges shall be accounted for in accordance with *SSAP No. 28—Nonmonetary Transactions*.

**Disclosures**

13. The following disclosures regarding common stocks shall be made in the financial statements:

   a. Basis at which the common stocks are stated; and

   b. A description, as well as the amount, of common stock that is restricted and the nature of the restriction.
14. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

15. This statement rejects FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities.

Effective Date and Transition

16. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Derivative Instruments

SCOPE OF STATEMENT

1. The purpose of this statement is to establish statutory accounting principles for derivative instruments (hereinafter referred to as derivatives).

SUMMARY CONCLUSION

2. Derivatives are defined as swaps, options, forwards, futures, caps, floors, and collars. The following are general definitions for these derivative instruments.

Swaps

3. Swaps are contracts to exchange, for a period of time, the investment performance of one underlying instrument for the investment performance of another underlying instrument, typically without exchanging the instruments themselves. Swaps can be viewed as a series of forward contracts that settle in cash rather than by physical delivery. Swaps generally are negotiated over-the-counter directly between the dealer and the end user. Interest rate swaps are the most common form of swap contract. However, foreign currency and commodity swaps also are common.

4. An interest rate swap is a contractual agreement between two parties to exchange interest rate payments (usually fixed for variable) based on a specified amount of underlying assets or liabilities (known as the notional amount) for a specified period. The swap does not involve an exchange of principal. The result of these transactions is to transform payments from a variable rate to a fixed rate, from a fixed rate to a variable rate or from one variable rate index to another variable rate index.

5. Interest rate swaps have historically been entered into for the purpose of lowering borrowing costs, obtaining otherwise unavailable financing terms, and/or improving asset and liability management through a reduction of an entity’s exposure to interest rate risk. Banks and brokers will enter into an interest rate swap with an interested party before a swap partner is found, creating a swap portfolio. This activity allows the entity that desires a swap transaction immediate access to the market. This secondary market also allows a swap participant a vehicle to unwind or reverse swap positions it no longer wants or to receive cash if the position to be disposed of is favorable in relation to the current market.

6. While swaps may involve the trading of interest on liabilities or assets, the insurance industry has used swaps to match return on assets to contract obligations. Insurers also have acted as an intermediary or broker in the process of arranging a swap. Swaps may involve long periods of time and significant amounts of interest on substantial notional amounts. Unmatched or naked swaps are sometimes written where no underlying asset or liability exists.

7. The risk to the parties of a swap agreement is reduced by the fact that no transfer of principal is involved. The cash exchanged between the parties is usually the net interest differential only.

Options

8. Options are contracts that give the option holder (purchaser of the option rights) the right, but not the obligation, to enter into a transaction with the option writer (seller of the option rights) on terms specified in the contract. A call option allows the holder to buy the underlying instrument, while a put option allows the holder to sell the underlying instrument. Options are traded on exchanges and over the counter.
Forwards

9. Forward contracts are agreements (other than a futures) between two parties that commit one party to purchase and the other to sell the instrument or commodity underlying the contract at a specified future date. Forward contracts fix the price, quantity, quality, and date of the purchase and sale. Some forward contracts involve the initial payment of cash and may be settled in cash instead of by physical delivery of the underlying instrument.

Futures

10. Futures are standardized forward contracts traded on organized exchanges. Each exchange specifies the standard terms of futures contracts it sponsors. Futures contracts are available for a wide variety of underlying instruments, including insurance, agricultural commodities, minerals, debt instruments (such as U.S. Treasury bonds and bills), composite stock indices, and foreign currencies.

Caps

11. Caps are option contracts in which the cap writer (seller), in return for a premium, agrees to limit, or cap, the cap holder’s (purchaser) risk associated with an increase in a reference rate or index. For example, in an interest rate cap, if rates go above a specified interest rate level (the strike price or the cap rate), the cap holder is entitled to receive cash payments equal to the excess of the market rate over the strike price multiplied by the notional principal amount. Because a cap is an option-based contract, the cap holder has the right but not the obligation to exercise the option. If rates move down, the cap holder has lost only the premium paid. A cap writer has virtually unlimited risk resulting from increases in interest rates above the cap rate.

Floors

12. Floors are option contracts in which the floor writer (seller), in return for a premium, agrees to limit the risk associated with a decline in a reference rate or index. For example, in an interest rate floor, if rates fall below an agreed rate, the floor holder (purchaser) will receive cash payments from the floor writer equal to the difference between the market rate and an agreed rate multiplied by the notional principal amount.

Collars

13. A collar is a combination of a cap and a floor (one purchased and one written). A collar fixes the rate between two levels (the strike prices of the cap and the floor).

14. To the extent a derivative is in an asset position, the instrument meets the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets and is an admitted asset to the extent it conforms to the requirements of this statement. To the extent a derivative is in a liability position, the instrument meets the definition of a liability as defined in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5).
Hedge Accounting

General

15. A hedging transaction is defined as a derivative transaction which is entered into and maintained to reduce:
   a. The risk of a change in the value, yield, price, cash flow, or quantity of assets or liabilities which the reporting entity has acquired or incurred or anticipates acquiring or incurring, or;
   b. The currency exchange rate risk or the degree of exposure as to assets or liabilities which a reporting entity has acquired or incurred or anticipates acquiring or incurring.

16. Derivatives used by reporting entities in hedging activities shall be accounted for in a manner consistent with the item hedged. For example, if the item being hedged is accounted for at amortized cost, the hedging derivative also is accounted for at amortized cost. If the item being hedged is accounted for at market value, the hedging derivative also is accounted for at market value.

Criteria to Qualify for Hedge Accounting

17. To qualify for hedge accounting, the derivative shall be designated as a hedge of a specific asset, liability, or anticipated transaction. The specific asset, liability, or anticipated transaction to be hedged must expose the reporting entity to a risk and the designated derivative transaction must reduce that exposure. Examples of items that expose the reporting entity to risk include change in the value, yield, price, cash flow, or quantity of, or degree of exposure with respect to assets, liabilities, or future cash flows which a reporting entity has acquired or incurred, or anticipates acquiring or incurring.

18. To satisfy the condition of risk reduction, the reporting entity shall demonstrate how the derivative reduces risk by using an appropriate method. There are a variety of methods available that can be used to demonstrate risk reduction, including methods which analyze the correlation of gains and losses on the derivative in relation to the losses and gains on the hedged asset, liability, or future cash flow.

19. Reporting entities shall set specific criteria at the inception of the hedge as to what will be considered effective in measuring the hedge and apply those criteria in the ongoing assessment of actual hedge results. For example, if correlation is used to measure the effectiveness of a hedge, high correlation of changes in the fair value of the derivative and the fair value of the item being hedged shall be probable so that such changes will substantially offset each other throughout the hedge period. Other methods used shall demonstrate a similar result to be considered effective. Also, at the inception of the hedge, formal documentation of the hedging instrument and the related hedged item, as provided in the documentation guidance section of this statement, shall be drafted and retained for future reference.

Gain or Loss Upon Termination

20. Upon termination of a derivative that qualifies for hedge accounting, the gain or loss shall adjust the basis of the hedged item. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the hedging derivative may be realized and shall be subject to IMR upon termination. Reporting entities shall account for a derivative at estimated fair value if it ceases to be effective as a hedge (that is, the gains and losses on the derivative no longer offset the losses and gains on the hedged instrument) and recognize the gain or loss currently in earnings.
Settlement Accounting for Swaps

21. Included in the concept of hedge accounting is the notion of settlement accounting for interest rate swaps that are matched through designation with an asset or a liability on the balance sheet. Under settlement accounting, periodic net cash settlements under the swap agreement are recognized in income when they accrue.

Mark to Market Accounting

22. Unrealized gains/losses under the immediate recognition method of accounting (mark to market) shall be recognized currently in earnings. The immediate recognition method of accounting (mark to market) shall be applied in situations where:

   a. A reporting entity enters into a derivative for other than hedging purposes;

   b. A portfolio has been hedged and the reporting entity is unable to assign the hedging instrument to specific assets and liabilities;

   c. There are derivatives that are not specifically addressed elsewhere in this guidance.

23. Other than hedging is defined as any transaction which does not qualify for hedge accounting, including active derivatives trading by a reporting entity who enters into derivatives for purposes of generating profits on short-term differences in market movements and not for risk reduction purposes. Unrealized gains and losses cannot be deferred when categorized as other than hedging.

24. Generally, mark to market accounting is used where it is impractical to allocate gains and losses to specific hedged assets, liabilities, or future cash flows. However, mark to market accounting is not precluded from being utilized in situations where the derivative qualifies for hedge accounting.

Consistent Application of Alternatives

25. The determination of hedge accounting or immediate recognition accounting shall be made for each individual instrument. A reporting entity may utilize immediate recognition accounting for certain derivatives within a category and hedge accounting for other derivatives within that same category. The reporting entity’s choice between hedge accounting and mark to market accounting shall be applied consistently for each individual instrument over the life of the derivative. A change in method shall be justified by a significant change in circumstance.

Specific Accounting Procedures for Derivatives

26. Call and Put Options, Caps, and Floors shall be accounted for as follows:

   a. Accounting at Date of Acquisition (purchase) or Issuance (written): The premium paid or received for purchasing or writing a call option, put option, cap or floor shall be recorded as an asset (purchase) or liability (written) as an Aggregate Write-in for Invested Asset (or) Liability;
b. **Statement Value:**

i. **Open derivatives hedging items recorded at amortized cost:**

(a) Options, caps, and floors purchased or written shall be valued at amortized cost in a manner consistent with the hedged item;

(b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate securities, the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change). Specific treatment includes:

1. Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;

2. For anticipatory hedges, the derivative may be recorded at cost until the anticipated hedged transaction occurs or it is determined that the hedge was not effective;

3. For other derivatives, the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program.

(c) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The market value of the hedging and hedged items shall be determined and reported separately;

(d) If during the life of the derivative, it is no longer effective as a hedge, valuation at amortized cost ceases and the derivative shall be valued at its current market value (marked to market) with gains and losses recognized in earnings to the extent they ceased to be effective hedges.

ii. **Open derivatives hedging items recorded at market value, (where gains and losses on the hedging item are recognized as adjustments to unassigned funds (surplus)):**

(a) Options, caps, or floors purchased or written shall be valued at current market value (marked to market) with changes in market value recognized currently consistent with the hedged item;

(b) This will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);

(c) For hedges where the cost of the derivative is combined with the hedged item, the market value of the hedging and hedged items will be determined and reported separately. The cost (book value) basis used to figure gain/loss on the derivative is zero.

iii. **Open derivatives hedging items recorded at market value, where gains and losses on the hedging item are recognized currently in earnings and for open derivatives accounted for under the immediate recognition method, options,**
caps, or floors purchased or written shall be valued at current market value (marked to market) with changes in market value recognized currently in earnings.

c. Cash Flows and Income

i. Where the cost of the derivative is not combined with the hedged item:

(a) Amortization of premium or discount on derivatives is an adjustment to net investment (operating) income;

(b) Periodic cash flows and accruals of income/expense shall be reported in a manner consistent with the hedged item, usually as other investment income (operating income).

ii. Where the cost of the derivative is combined with the hedged item, the cash flows and income of the derivative on Schedule DB will be zero. All related amortization and cash flow accounting shall be reported with the hedged item instead of with the derivative.

d. Gain/Loss on Termination of an option, cap or floor accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):

i. Exercise of an Option: The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;

ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate;

iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

27. Swaps, Collars, and Forwards shall be accounted for as follows:

a. Accounting at Date of Opening Position:

i. Any premium paid or received at date of opening shall be recorded as an asset (paid) or liability (received) as an Aggregate Write-in for Invested Asset (or) Liability;

b. Statement Value:

i. Open derivatives hedging items recorded at amortized cost:

(a) Swaps, collars, and forwards shall be valued at amortized cost in a manner consistent with hedged item;

(b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate securities the estimated effective yield shall be based on the current

31-8
rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change.) Specific treatment includes:

(1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;

(2) For anticipatory hedges, the derivative may be recorded at cost until the anticipated hedged transaction occurs or it is determined that the hedge was not effective;

(3) For other derivatives the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program;

(4) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The market value of the hedging and hedged items shall be determined and reported separately;

(5) If during the life of the derivative it is no longer effective as a hedge, valuation at amortized cost ceases and the derivative shall be valued at its current market value (marked to market) with gains and losses recognized in earnings to the extent that it ceased to be an effective hedge.

ii. Open derivatives hedging items recorded at market value (where gains and losses on the hedging item are recognized as adjustments to unassigned funds (surplus)):

(a) Swaps, collars, or forwards shall be valued at current market value (marked to market) with changes in market value recognized currently consistent with the hedged item;

(b) This will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);

(c) For hedges where the derivative is combined with the hedged item, the market value of the hedging and hedged items shall be determined and reported separately. The cost (book value) basis used to figure gain/loss on the derivative is zero.

iii. Open foreign currency swap and forward contracts hedging foreign currency exposure on items denominated in a foreign currency and translated into U.S. dollars where the immediate recognition method of accounting is not being used:

(a) The foreign exchange premium (discount) on the currency contract shall be amortized into income over the life of the contract. The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened.
Amortization is not required if the contract was entered into within a year of maturity;

(b) A foreign currency translation adjustment shall be reflected as an unrealized gain/loss (unassigned funds (surplus) adjustment) using the same procedures as done to translate the hedged item;

(c) The unrealized gain/loss for the period equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the prior period end spot rate;

(d) The statement value of the currency contract equals the amortized (premium) discount plus the cumulative unrealized gain/(loss) on the contract. The cumulative unrealized gain/(loss) equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened;

(e) Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on anticipated firm commitments may be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs;

(f) For hedges where the cost of the foreign currency contract is combined with the hedged item, the statement value is zero. The market value of the hedging and hedged items is determined and reported separately;

(g) If during the life of the currency contract it is not effective as a hedge, valuation at amortized cost shall cease. To the extent it ceased to be an effective hedge, a cumulative unrealized gain/loss will be recognized in earnings equal to the notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.

iv. Open derivatives hedging items recorded at market value, where gains and losses on the hedging item are recognized currently in earnings and for open derivatives accounted for under the immediate recognition method, swaps, collars and forwards shall be valued at current market value (marked to market) with changes in market value recognized currently in earnings.

c. Cash Flows and Income:

i. Where the cost of the derivative is not combined with the hedged item:

(a) Amortization of premium or discount on derivatives is an adjustment to net investment (operating) income;

(b) Periodic cash flows and accruals of income/expense are to be reported in a manner consistent with the hedged item, usually as other investment income (operating income).
ii. Where the cost of the derivative is combined with the hedged item, the cash flows and income of the derivative on Schedule DB is zero. All related amortization and cash flow accounting shall be reported with the hedged item instead of with the derivative.

d. Gain/Loss on Termination of a swap, collar or forward accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):

i. Exercise—The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;

ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate;

iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges;

28. Futures shall be accounted for as follows:

a. Accounting at Date of Acquisition:

i. Positions in futures contracts shall be initially valued at the amount of cash deposits (i.e., basis or book value of the contract), if any, placed with a broker. Subsequent additions (reductions) in cash deposits plus changes in contract value from date of contract opening (i.e., variation margin) paid (received) will increase (decrease) the book value of the futures contract.

b. Statement Value:

i. Hedges of Items Recorded at Amortized Cost:

(a) Futures shall be valued at book value;

(b) Book value of open futures contracts need not be amortized;

(c) For hedges where the cost of the futures contract is combined with the hedged item, the statement value would be equal to cash deposits outstanding. The market value of the hedging and hedged items will be determined and reported separately. Market value on futures contracts is limited to the value of the cash deposits outstanding;

(d) If during the life of the futures contract it is no longer effective as a hedge, valuation at book value (deferral accounting) ceases. A gain/(loss) equal to the variation margin received (paid) shall be recognized in earnings to the extent it ceased to be an effective hedge. Statement value will be limited to the cash deposits outstanding.

ii. Hedges of Items Recorded at Market Value (where gains and losses on the hedging item are recognized as adjustments to unassigned funds (surplus)):
(a) Changes in contract value from date of contract opening (i.e., variation margin) shall be recognized currently consistent with the hedged item. Statement value will be limited to the cash deposits outstanding;

(b) This will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);

(c) For hedges where the variation margin of the futures contract is combined with the hedged item, the market value of the hedging and hedged items will be determined and reported separately.

iii. Open foreign currency futures contracts hedging foreign currency exposure on item(s) denominated in a foreign currency and translated into U.S. dollars (where the immediate recognition method of accounting is not being used:

(a) The foreign exchange premium (discount) on the currency contract will be amortized into investment income over the life of the contract. The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened. The cumulative income recognized since the contract was opened shall be reported as recognized variation margin received or (paid).

Amortization is not required if the contract was entered into within a year of maturity;

(b) A foreign currency translation adjustment shall be reflected as an unrealized gain/loss (unassigned funds (surplus) adjustment) using the same procedures as is done to translate the hedged item. The cumulative unrealized gain/(loss) which equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened shall be reported as recognized variation margin received or (paid);

(c) The statement value of the currency futures contract is book value, including any increase (decrease) for amortization of foreign exchange (premium) discount plus the foreign exchange translation gain/(loss), which is reported as deferred variation margin;

(d) Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on anticipated firm commitments may be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs;

(e) For hedges where the variation margin of the foreign currency contract is combined with the hedged item, the statement value would equal the cash deposits outstanding. The market value of the hedging and hedged items will be determined and reported separately. Market value on futures contracts is limited to the value of the cash deposits outstanding;
(f) If during the life of the currency contract it is not effective as a hedge, valuation at amortized cost ceases. To the extent it ceased to be an effective hedge, a cumulative unrealized gain/loss will be recognized in earnings equal to the notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.

iv. Open derivatives hedging items recorded at market value, where gains and losses on the hedging item are recognized currently in earnings and for open derivatives accounted for under the immediate recognition method, futures shall be valued at current market value (marked to market) with changes in market value recognized currently in earnings.

c. Gain/Loss on Termination of a futures contract accounted for under hedge accounting:

i. Settlement at maturity of a futures contract—The remaining variation margin of the futures contract shall become an adjustment to the cost or proceeds of the hedged item(s) received, disposed of or held, individually or in aggregate;

ii. Sale or other closing transaction of a futures contract which is an effective hedge—Any gain or loss on the transaction will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate;

iii. Gain/loss on termination of futures contracts will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges;

Income Generation Transactions

General

29. Income generation transactions are defined as derivatives written or sold to generate additional income or return to the reporting entity. They include covered options, caps, and floors (e.g., a reporting entity writes an equity call option on stock which it already owns).

30. Because these transactions require writing derivatives, they expose the reporting entity to potential future liabilities for which the reporting entity receives a premium up front. Because of this risk, dollar limitations and additional constraints are imposed requiring that the transactions be “covered” (i.e., offsetting assets can be used to fulfill potential obligations). To this extent, the combination of the derivative and the covering asset works like a reverse hedge where an asset owned by the reporting entity in essence hedges the derivative risk.

31. As with derivatives in general, these instruments include a wide variety of terms regarding maturities, range of exercise periods and prices, counterparties, underlying instruments, etc.

32. The principal features of income generation transactions are:

a. Premium received is initially recorded as a deferred liability;

b. The accounting of the covering asset or underlying interest controls the accounting of the derivative. The covering asset/underlying interest is accounted at either mark-to-market (e.g., common stocks) or (amortized) cost (e.g., bonds);
c. The gain/loss on termination of the derivative is a capital item. For life insurance companies, it shall be subject to IMR treatment if interest rate related;

d. For options which are exercised, the remaining premium shall adjust the proceeds (cost) associated with the exercise resulting in no explicit gain or loss reported for the derivative itself.

**Written Fixed Income Covered Call Options**

33. The principal features of written fixed income covered call options are:

a. The general approach is to value at cost (i.e., consideration received) without amortization over the life of the contract;

b. An alternative to the general approach combines the accounting of the written option with the covering asset and then uses standard accounting for callable bonds (yield to worst amortization) on the adjusted asset. This method prevents the possibility of future loss recognition upon exercise while at the same time providing recognition of the income feature of the option over time. This approach would appear most relevant for longer-lived covered European call options, which are in substance like callable bonds;

c. For life insurance companies, the gain or loss flows through the IMR if the covering asset or underlying interest is subject to the IMR using callable bond rules to determine the remaining life;

d. Reporting entities are responsible for timely recognition of any probable losses that may occur as a result of the strategy. If the exercise price is below the covering asset’s book value, the asset shall be evaluated for write down or disclosure treatment in accordance with SSAP No. 5. All relevant factors such as whether the option is currently exercisable, the fair value of the bond relative to its exercise price, to what extent the statement value of the option premium offsets any loss on the asset, or how any IMR transaction on exercise would affect unassigned funds (surplus) and income shall be considered.
34. Written fixed income covered call options shall be accounted for as follows:

<table>
<thead>
<tr>
<th>STATUS OF OPTION</th>
<th>COVERING ASSET VALUED AT AMORTIZED COST</th>
<th>COVERING ASSET VALUED AT MARKET VALUE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>
<td>Record premium as deferred liability</td>
<td>Record premium as deferred liability</td>
</tr>
<tr>
<td></td>
<td>Carry at consideration received. (1)</td>
<td>Mark to market with changes in market value recorded as unrealized adjustments to unassigned funds (surplus) – gain/loss.</td>
</tr>
<tr>
<td></td>
<td>Alternatively, attach premium to covering asset and amortize (under yield to worse scenario) using standard callable bond accounting. (2)</td>
<td></td>
</tr>
<tr>

<td>Recognize net amount as realized capital gain/loss.</td>
</tr>
<tr>
<td></td>
<td>Gain or loss from disposition to flow through IMR, if applicable. (3)</td>
<td></td>
</tr>
</tbody>
</table>

Notes

1. Reporting entities writing options for income generation purposes are responsible for the timely recognition of any probable losses that may occur as a result of the strategy due to holding and accounting for options on Schedule DB—Part B.

3. If premium is attached to covering asset, the accounting treatment for the covering asset applies.
Written Covered Put Options

35. The principal features of written covered put options are:
   a. The accounting for the underlying interest instead of the covering asset governs the accounting of the written put while it is open. For example, if a reporting entity wrote a put requiring it to purchase a certain common stock (underlying interest) at a specific price, the reporting entity might cover that option by holding cash or cash equivalents (covering asset). The accounting for the common stock would govern the accounting of the option in this case;
   b. As with covered call writing for life insurance companies, gain/loss on termination may be subject to IMR over the remaining life of the underlying interest;
   c. As with covered call writing, entities writing put options for income generation purposes are responsible for timely recognition of any probable losses that may occur as a result of the strategy.

36. Written covered put options shall be accounted for as follows:

<table>
<thead>
<tr>
<th>STATUS OF OPTION</th>
<th>UNDERLYING INTEREST VALUED AT AMORTIZED COST</th>
<th>UNDERLYING INTEREST VALUED AT MARKET VALUE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>
<td>Record premium as deferred liability.</td>
<td>Record premium as deferred liability.</td>

<tr>
<td>Closed – Exercised</td>
<td>Adjust acquisition cost by premium received.</td>
<td>Adjust acquisition cost by premium received.</td>
</tr>
<tr>
<td>Closed – Terminated</td>
<td>Recognize net amount as realized capital gain/loss.</td>
<td>Recognize net amount as realized capital gain/loss.</td>
</tr>
</tbody>
</table>
Notes

1. Reporting entities writing options for income generation purposes are responsible for the timely recognition of any probable losses that may occur as a result of the strategy due to holding and accounting for options on Schedule DB—Part B.

Written Fixed Income Caps And Floors

37. The principal features of written fixed income caps and floors are:

a. The value of the premium received shall be amortized into income over the life of the contract. For caps and floors, where the entity is selling off possible excess interest/income, the value of the covering asset is not relevant;

b. Gain/loss may be subject to IMR. The expected maturity would be the derivative contract’s maturity.

38. Written fixed income caps and floors shall be accounted for as follows:

<table>
<thead>
<tr>
<th>STATUS OF OPTION</th>
<th>COVERING ASSET VALUED AT AMORTIZED COST</th>
<th>COVERING ASSET VALUED AT MARKET VALUE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>
<td>Record premium as deferred liability.</td>
<td>Record premium as deferred liability.</td>
</tr>
<tr>
<td></td>
<td>Carry at amortized value. (Alternatively carry at consideration received if within 1 year of maturity.)</td>
<td>Mark to market with changes in market value recorded as unrealized adjustments to unassigned funds (surplus) – gain/loss.</td>
</tr>
<tr>
<td></td>
<td>Amortize over life of contract to produce constant yield.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Record any interest expense as “Other Investment Income” – negative value.</td>
<td></td>
</tr>
<tr>
<td>Closed – Matured</td>
<td>Would usually mature at zero amortized value.</td>
<td>Premium received recognized as realized capital gain.</td>
</tr>
<tr>
<td></td>
<td>Any remaining unamortized value recognized as ordinary income through a final amortization adjustment.</td>
<td></td>
</tr>
<tr>
<td>Closed – Exercised</td>
<td>Not applicable.</td>
<td>Not applicable.</td>
</tr>
<tr>
<td>Closed – Terminated</td>
<td>Recognize net amount as realized capital gain/loss.</td>
<td>Recognize net amount as realized capital gain/loss.</td>
</tr>
</tbody>
</table>
39. Examples of accounting and presentation based on varying assumptions can be found in the October 1, 1996 minutes of the Accounting Practices and Procedures (EX4) Task Force.

**Insurance Futures and Insurance Futures Options**

**General**

40. Accounting for futures or options is similar to that of insurance futures or insurance futures options accounting. However, for purposes of this statement, insurance futures are viewed as insurance-related transactions and not as investment-related transactions. This distinction results in different reporting for the results of insurance futures and insurance futures options. As a result separate guidance is provided for insurance futures and insurance futures options.

41. Insurers generally use insurance futures or insurance futures options, to hedge against adverse development in incurred losses. This strategy typically would involve any or a combination of:

   a. The purchase of insurance futures contracts;
   
   b. The purchase of a call option on insurance futures contracts;
   
   c. The sale (writing) of a put option on insurance futures contracts.

**Insurance Futures Contracts**

42. An insurance futures contract is a futures contract based on an underlying index of performance of insurance contracts (policies) or factors relating thereto. In connection with a given insurance futures position, a reporting entity is required by the listing exchange to maintain a margin deposit with respect to the underlying insurance futures contracts purchased.

43. A reporting entity shall report the amount of any margin deposit as an asset. The specific accounting treatment of increases or decreases in the value of the subject contracts will depend on whether the insurance futures position constitutes a hedge of the reporting entity’s incurred losses. The determination of whether an insurance futures position constitutes a hedge shall be made consistent with the criteria identified in paragraphs 17 through 19.

**Insurance Futures Contracts—Hedge Accounting**

44. Increases (decreases) in the value of insurance futures contracts that effectively hedge incurred losses shall be reported as an increase (decrease) in other income when the insurance futures position corresponds to incurred losses for the current reporting period. With respect to any insurance futures position which corresponds to a period beyond the current reporting period, any increases (decreases) in the value of the underlying insurance futures contracts shall be reported as a direct increase (decrease) in unassigned funds (surplus). When the insurance futures position thereafter corresponds to a current reporting period, the initial increase (decrease) in direct unassigned funds (surplus) shall be reversed and the amount shall be reported as an increase (decrease) to other income for the current period, along with any current changes in value of the insurance futures contracts.

45. In either of the foregoing instances, the increase (decrease) in the market value of the insurance futures contracts shall either (a) increase (decrease) other than invested assets, to the extent that such increase (decrease) affects the corresponding margin deposit, or (b) increase (decrease) cash or other assets, to the extent of mark-to-market payments that are not maintained as a margin deposit. When the
insurance futures position is closed, any corresponding margin balance shall be transferred to cash or other assets, as appropriate.

Insurance Futures Contracts—Other than Hedge Accounting

46. If the insurance futures position is no longer effective as a hedge, any increases (decreases) in the value of the insurance futures contract shall be reported as miscellaneous income. When the insurance futures positions close, any corresponding margin balance shall be transferred to cash or other assets, as appropriate.

Options on Insurance Futures Contracts

47. An insurance futures option is either a put or call option on an insurance futures contract. An insurance futures call option is a contract under which the holder has the right to purchase the underlying insurance futures contract covered by the option at a stated price (strike price) on or before a fixed expiration date. An insurance futures put option gives the holder the right to sell the underlying insurance futures contract. The consideration paid (received) for the purchase (sale) of an insurance futures option is referred to as a premium. Because all insurance futures options relate to an underlying insurance futures contract, the accounting treatment of insurance futures options generally follows the treatment afforded insurance futures contracts.

48. The amount of any premium paid for an insurance futures option shall be reported as other than invested assets. Similarly, the amount of any premium received for the sale (writing) of an insurance futures option shall be reported as a liability. The specific statutory accounting treatment of increases or decreases in the market value of the subject insurance futures option shall depend on whether such position constitutes a hedge of incurred losses. The determination of whether an insurance futures position constitutes a hedge shall be made consistent with the criteria identified in paragraphs 17 through 19.

Options on Insurance Futures Contracts—Hedge Accounting

49. Increases (decreases) in the market value of call options purchased, which effectively hedge incurred losses, shall be reported as an increase (decrease) in other income, when the call options correspond to incurred losses for the current reporting period. With respect to any call option which corresponds to a period beyond the current reporting period, any increases (decreases) in the market value of the underlying option shall be reported as a direct increase (decrease) in unassigned funds (surplus). When the option thereafter corresponds to a current reporting period, the initial increase (decrease) in direct unassigned funds (surplus) shall be reversed and the amount shall be reported as an increase (decrease) to other income along with any current changes in the market value of the option.

50. If the option position is terminated through a closing transaction, the corresponding balance of the asset (i.e., aggregate write-in for other than invested assets) shall be eliminated, with a corresponding charge to cash or other assets, as appropriate. If the option is exercised, the corresponding balance of the asset (i.e., aggregate write-in for other than invested assets) shall be eliminated, with a corresponding charge to either (a) insurance futures margin, to the extent of margin deposit requirements, or (b) cash or other assets, as appropriate. If the option expires, the corresponding balance of the asset shall be eliminated, with an appropriate decrease to the reporting entity’s other income.

51. The accounting treatment for the sale (writing) of insurance futures put options is essentially the mirror image of the foregoing treatment presented with respect to purchased call options. Upon termination (through a closing transaction), exercise, or expiration of the put option, the corresponding balance of the liability shall be eliminated, in the mirror image of the foregoing treatment.
Options on Insurance Futures Contracts—Other than Hedge Accounting

52. If the insurance futures option position is no longer effective as a hedge, any increases (decreases) in the value option shall be reported as miscellaneous income. Other than hedge accounting shall be used in the event that an original hedge position loses its character as such, until such time as the position is terminated.

Documentation Guidance

53. A reporting entity shall maintain documentation and records relating to derivatives opened during the year, instruments outstanding at year end, and instruments terminated during the year. Minimum required documentation is described in the following paragraphs.

54. For derivatives opened during the year:
   a. A description, for each instrument, of the purpose of the transaction, including:
      i. A brief description of the assets and/or liabilities hedged by the instrument;
      ii. A brief description of the manner in which the instrument reduces risk;
      iii. A reference to the reporting entity’s hedge program under which such transaction is internally authorized.
   b. Signature of approval, for each instrument, by person(s) authorized, either by the entity’s board of directors or a committee authorized by the board, to approve such transactions;
   c. A description, for each instrument, of the nature of the transaction, including:
      i. The date of the transaction;
      ii. A complete and accurate description of the specific derivative, including description of the underlying securities, currencies, rates, indices, commodities, derivatives, or other financial market instruments;
      iii. Number of contracts or notional amount;
      iv. Date of maturity, expiry or settlement;
      v. Strike price, rate or index, (opening price for futures contracts);
      vi. Counterparty, or exchange on which the transaction was traded;
      vii. Cost or consideration received, if any, for opening transaction.
   d. A description of the reporting entity’s methodology used to verify that opening transactions do not exceed limitations promulgated by the state of domicile.
55. For derivatives terminated during the year:
   a. Signature of approval, for each instrument, by person(s) authorized, either by the entity’s 
      board of directors or a committee authorized by the board, to approve such transactions;
   b. A description, for each instrument, of the nature of the transaction, including:
      i. The date of the transaction;
      ii. A complete and accurate description of the specific derivative, including 
          description of the underlying securities, currencies, rates, indices, commodities, 
          derivatives, or other financial market instruments;
      iii. Number of contracts or notional amount;
      iv. Date of maturity, expiry or settlement;
      v. Strike price, rate or index, (termination price for futures contracts);
      vi. Counterparty, or exchange on which the transaction was traded;
      vii. Consideration paid or received, if any, on termination.
   c. Description of the reporting entity’s methodology to verify that derivatives were 
      effective hedges;
   d. Identification of any derivatives that ceased to be effective as hedges.

56. For derivatives open at year end:
   a. A description of the methodology used to verify the continued effectiveness of hedges;
   b. An identification of any derivatives which have ceased to be effective as hedges;
   c. A description of the reporting entity’s methodology to determine market values of 
      derivatives;
   d. Copy of Master Agreements, if any, where indicated on Schedule DB Part E Section 1.

Disclosures

57. Reporting entities shall disclose the following for all derivative contracts outstanding:
   a. Disclosures by category of instrument:
      i. Notional or contract amounts;
      ii. Carrying and fair values;
      iii. A description of the accounting policies for derivatives;
      iv. A discussion of the market risk, credit risk, and cash requirements of the 
          derivatives.
b. General Disclosures:
   
i. A description of the reporting entity’s objectives for holding or issuing the derivatives, the context needed to understand those objectives, and its strategies for achieving those objectives, including the classes of derivatives used;

   ii. A description of how each category of derivative is reported in the financial statements including the policies for recognizing (or reasons for not recognizing) and measuring the derivatives held or issued, and when recognized, where those instruments and related gains and losses are reported.

58. Reporting entities shall disclose the following for derivatives held for other than hedging purposes:

   a. Average fair value of the derivatives during the reporting period together with the related end-of-period fair value distinguishing between assets and liabilities;

   b. Net gains or losses disaggregated by class, business activity or other category that is consistent with the management of those activities and where the net gains or losses are reported.

59. The financial statements shall disclose details of covered items and/or written transactions to allow evaluation of cash flow implications for all written covered options used for income generation.

60. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure requirements of paragraphs 58 and 59 shall be included in the annual audited statutory financial reports only.

Relevant Literature

61. This statement adopts FASB Statement No. 105, Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk (FAS 105) for all financial instruments with off-balance sheet risk with modification to the disclosure required in paragraph 17 to require that the disclosure distinguish between derivatives entered into for hedging purposes from those entered into for other than hedging purposes. Paragraph 19 is rejected as it addresses voluntary disclosures not required by this statement.

62. This statement adopts FASB Statement No. 119, Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments (FAS 119) with the modification to the disclosure required in paragraph 8 to distinguish between derivatives entered into for hedging purposes from those entered into for other than hedging purposes. The disclosures required for trading derivatives by paragraph 10 of FAS 119 shall be required for derivatives entered into for other than hedging purposes. Paragraphs 12 and 13 are rejected. This statement also adopts FASB Emerging Issues Task Force No. 84-7, Termination of Interest Rate Swaps and FASB Emerging Issues Task Force No. 84-36, Interest Rate Swap Transactions.

63. This statement rejects FASB Statement No. 52, Foreign Currency Translation, FASB Statement No. 80, Accounting for Futures Contracts and the following FASB Emerging Issues Task Force pronouncements:

   a. FASB Emerging Issues Task Force No. 84-14, Deferred Interest Rate Setting;
b. FASB Emerging Issues Task Force No. 86-34, Futures Contracts Used as Hedges of Anticipated Reverse Repurchase Transactions;

c. FASB Emerging Issues Task Force No. 87-2, Net Present Value Method of Valuing Speculative Foreign Exchange Contracts;

d. FASB Emerging Issues Task Force No. 88-8, Mortgage Swaps;

e. FASB Emerging Issues Task Force No. 90-17, Hedging Foreign Currency Risk with Purchased Options;

f. FASB Emerging Issues Task Force No. 91-1, Hedging Intercompany Foreign Currency Risks;

g. FASB Emerging Issues Task Force No. 91-4, Hedging Foreign Currency Risks with Complex Options and Similar Transactions;

h. FASB Emerging Issues Task Force No. 96-11, Accounting for Forward Contracts and Purchase Options to Acquire Securities Covered Under FASB Statement No. 115.

Effective Date and Transition

64. This statement is effective for years beginning January 1, 2001. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Investments in Preferred Stock (excluding investments in preferred stock of subsidiary, controlled, or affiliated entities)

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of subsidiaries, controlled or affiliated entities (investments in affiliates) are not within the scope of this statement. They are addressed in SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities.

SUMMARY CONCLUSION

3. Preferred stock (excluding investments in affiliates), which may or may not be publicly traded and may include shares against which exchange traded call options are outstanding, shall include:

   a. Redeemable preferred stock, including mandatory sinking fund preferred stock and preferred stock redeemable at the option of the holder; and

   b. Perpetual preferred stock, including nonredeemable preferred stock and preferred stock redeemable at the option of the issuer.

4. Redeemable preferred stock is defined as preferred stock that must be redeemed by the issuing enterprise or is redeemable at the option of the reporting entity. It includes mandatory sinking fund preferred stock and payment-in-kind (PIK) preferred stock.

5. Mandatory sinking fund preferred stock is defined as redeemable preferred stock subject to a 100% mandatory sinking fund, annual installments of which will (a) commence not more than 10 years from the date of issue or December 31, 1978, if outstanding on that date; (b) be not less than 2% of the number of shares issued (or outstanding on December 31, 1978, if issued prior to that date); (c) provide for the redemption of the entire issue over a period not longer than 40 years from the date of issue, or December 31, 1978, if outstanding on that date. Redeemable preferred stock which is subject to a 100% mandatory sinking fund, but which does not, at date of issue or December 31, 1978, if outstanding at that time, meet one or more of the other requirements above, shall be considered as mandatory sinking fund preferred stock at the time the deficiency is cured through the passage of time or otherwise.

6. PIK preferred stock is defined as redeemable preferred stock on which, at the option of the issuer, dividends can be paid in additional securities rather than cash.

7. Perpetual preferred stock is defined as preferred stock with no redemption or sinking fund features and preferred stock redeemable at the option of the issuer.

8. Restricted preferred stock is defined as a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.

9. Preferred stocks meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.
Acquisitions and Sales

10. At acquisition, preferred stock shall be reported at cost, including brokerage and other related fees. Cost shall not exceed market value. PIK stock received as dividends shall be recorded at market value. Acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

11. A reporting entity can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Preferred stock acquired under a subscription represents a conditional transaction in a security authorized for issuance but not yet actually issued. Such transactions are settled if and when the actual security is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to be settled. Preferred stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the security and the security is recorded in the name of the reporting entity or its nominee, (i.e., the accounting for such preferred stock acquisitions shall be on the settlement date).

Amortization

12. Redeemable preferred stock purchased at a premium shall be amortized to reduce the carrying value to the call or redemption value over the period to the call or earliest redemption date, whichever produces the lowest asset value (yield to worst). Redeemable preferred stock purchased at a discount shall be amortized to increase the carrying value to par value over the period to maturity or the latest redemption date.

13. PIK preferred stock shall be amortized to the lower of the call price or par value, measured in either case at the end of the stock dividend period and based on all of the shares expected to be held at the end of that period, including those received as dividends.

14. Amortization shall be calculated using the interest method and shall be reported as increases or decreases in dividends collected during the year.

Balance Sheet Amount

15. The Securities Valuation Office classifies preferred stocks into six redeemable preferred stock quality categories and six perpetual preferred stock quality categories. Preferred stocks shall be classified in accordance with the Valuations of Securities manual published by the NAIC Valuation of Securities (EX4) Task Force.

16. Preferred stock shall be valued based on (a) the underlying characteristics of the security, (b) the quality rating of the security as defined in the NAIC Purposes and Procedures of the Securities Valuation Office (Purposes and Procedures of the SVO) and reported in the NAIC Valuations of Securities manual, and (c) whether an Asset Valuation Reserve (AVR) is maintained by the reporting entity. Unrealized gains and losses on perpetual preferred stock shall be included as a direct credit or charge to unassigned funds (surplus).

Reporting Entities That Do Not Maintain An AVR

17. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair market value.
Investments in Preferred Stock (excluding investments in preferred stock of subsidiary, controlled, or affiliated entities)  SSAP No. 32

18. Highest-quality or high-quality perpetual preferred stocks (NAIC designations 1 and 2), which have characteristics of equity securities, shall be valued at market value as reported in NAIC Valuations of Securities manual. All other perpetual preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost or fair market value.

**Reporting Entities That Do Maintain An AVR**

19. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of cost, amortized cost, or fair market value.

20. Highest-quality, high-quality or medium quality perpetual preferred stocks (NAIC designations 1 to 3), which have characteristics of equity securities, shall be valued at cost. All other perpetual preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of cost or fair market value.

**Impairment**

21. If it is determined that a decline in the fair market value a preferred stock is other than temporary, the preferred stock shall be written down to fair market value as a new cost basis and the amount of the write down shall be accounted for as a realized loss. For those reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

22. Perpetual preferred stock shall be accounted for in accordance with paragraph 18 or paragraph 20, as applicable, subsequent to the recognition of an other than temporary impairment. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. A decline in fair value which is other than temporary includes situations where the reporting entity has made a decision to sell a security at an amount below its carrying value.

23. Redeemable preferred stock shall be accounted for in accordance with paragraph 17 or paragraph 19, as applicable, subsequent to the recognition of an other than temporary impairment. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the security in effect at the date of acquisition. A decline in fair value which is other than temporary includes situations where the reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value (i.e., amortized cost).

**Income**

24. Dividends on preferred stock (whether cumulative or noncumulative), other than mandatorily redeemable preferred stock, shall be recorded as investment income on the ex-dividend date with a corresponding receivable to be extinguished upon receipt of cash (i.e., dividend income shall be recorded on preferred stock declared to be ex-dividend on or prior to the statement date).

25. Dividends on mandatorily redeemable preferred stock shall be accrued to the redemption price, even if not declared, using the interest method over the period ending on the redemption date.

26. Cash dividends paid on PIK stock during the stock dividend period shall be accounted for as a reduction in the investment.
Exchanges and Conversions

27. If preferred stock is exchanged or converted into other securities, the fair value of the preferred stock surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. However, if the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the preferred stock surrendered, then it shall become the cost basis for the new securities.

Disclosures

28. The following disclosures regarding preferred stocks shall be made in the financial statements:
   a. Fair values in accordance with SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments (SSAP No. 27);
   b. Concentrations of credit risk in accordance with SSAP No. 27;
   c. Basis at which the preferred stocks are stated; and
   d. A description, as well as the amount, of preferred stock that is restricted and the nature of the restriction.

29. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure requirements of paragraphs 28 a. and 28 b. shall be included in the annual audited statutory financial reports only.

Securitization

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for asset securitizations and securitizations of policy acquisition costs. This statement is not intended to address transfers accomplished by means other than securitization.

SUMMARY CONCLUSION

2. An asset securitization is the process of converting assets which would normally serve as collateral for a loan into securities.

Accounting for Securitizations of Financial Assets

3. A financial asset shall be defined as cash, evidence of an ownership interest in an entity, or a contract that both
   a. Imposes on one entity a contractual obligation (i) to deliver cash or another financial instrument to a second entity or (ii) to exchange other financial instruments on potentially unfavorable terms with the second entity; and
   b. Conveys to that second entity a contractual right (i) to receive cash or another financial instrument from the first entity or (ii) to exchange other financial instruments on potentially favorable terms with the first entity.

4. A securitization in which the transferor surrenders control over the financial asset transferred shall be accounted for as a sale, with recognition of proceeds and measurement of a gain or loss only to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The portion of the securitization for which beneficial interests in the transferred assets are received shall not be accounted for as a sale, but shall be treated as an exchange of assets with no measurement of a gain or loss. All other securitizations shall be accounted for as secured borrowings in accordance with paragraph 11.

5. The transferor has surrendered control if, and only if, all of the following conditions are met:
   a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership;
   b. The transferee is a qualifying special-purpose entity and the holders of beneficial interests in that entity have the right—free of transferor-imposed conditions that constrain them from taking advantage of that right—to pledge or exchange those interests; and
   c. The transferor does not maintain effective control over the transferred assets through (i) an agreement that entitles and obligates the transferor to repurchase or redeem them before their maturity, or (ii) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable.

6. A beneficial interest shall be defined as the right to receive all or portions of specified cash inflows to a trust or other entity, including senior and subordinated shares of interest or principal inflows to be “passed through” or “paid through,” premiums due guarantors, and residual interests. Residual
interests are interests in the cash flows of the trust or other entity, after the cash flows of structured securities issued by the trust are met.

7. Upon completion of the securitization of financial assets meeting the criteria for sales treatment required by paragraph 5, the transferor shall:

a. Eliminate the transferred assets from the statement of financial position;

b. Allocate the previous carrying amount of the transferred assets to the securities representing beneficial interests retained by the reporting entity, if any, and the securities representing beneficial interests not retained, if any, based on the relative fair values of the transferred assets at the date of transfer;

c. Record in its statement of financial position, the allocated carrying value of the securities representing retained beneficial interests in the assets (e.g., loan-backed securities);

d. Recognize all additional assets obtained (i.e., other than the securities representing retained beneficial interests which are recorded in accordance with 7 c.) and liabilities incurred in consideration as proceeds of the sale;

e. Initially measure such additional assets obtained and liabilities incurred in the sale at fair value; and

f. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses shall be in accordance with SSAP No. 7--Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an IMR, realized gains and losses shall be reported as net realized capital gains or losses line in the Investment Income section of the Underwriting and Investment Exhibit.

8. The successor (transferee) shall recognize all assets obtained and any liabilities incurred and initially measure them at fair value.

9. A qualifying special-purpose entity (including a CMO special-purpose entity) as used in this statement must meet all of the following conditions:

a. It is a trust, corporation, or other legal vehicle whose activities are permanently limited by the legal documents establishing the special-purpose entity to:

i. Holding title to transferred financial assets;

ii. Issuing beneficial interests (If some of the beneficial interests are in the form of debt securities or equity securities, the transfer of assets is a securitization.);

iii. Collecting cash proceeds from assets held, reinvesting proceeds in financial instruments pending distribution to holders of beneficial interests, and otherwise servicing the assets held; and

iv. Distributing proceeds to the holders of its beneficial interests.

b. It has a standing at law distinct from the transferor. Having standing at law depends in part on the nature of the special-purpose entity. For example, generally, under U.S. law, if a transferor of assets to a special-purpose trust holds all of the beneficial interests, it
can unilaterally dissolve the trust, and thereby resume control over the individual assets held in the trust, and the transferor can effectively assign its interest and its creditors can reach it. In that circumstance, the trust has no standing at law, is not distinct, and thus is not a qualified special-purpose entity. A special-purpose entity that has distinct standing at law may still be an affiliate of the transferor.

**Investments in Special-Purpose Entities**

10. Reporting entities that have qualifying special-purpose entities as affiliates shall carry their investment in such entity at its underlying statutory book value in accordance with SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities. Additionally, transactions entered involving affiliated qualifying special-purpose entities are subject to the provisions of SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties.

**Secured Obligations and Collateral**

11. Securitizations of financial assets that do not meet the criteria for sale treatment set forth in paragraph 5 shall be presumed to be secured borrowings and shall be recorded as follows. Financial assets shall remain on the reporting entity’s books and a liability shall be recorded to reflect the proceeds from the issuance of any type of certificate. Non-cash proceeds shall be recorded as a contra liability and netted against the liability. The liability shall be reduced as the obligation to holders of beneficial interests is repaid. Financial assets pledged as collateral shall not be offset against the liability reflecting the proceeds of the transaction.

**Recognition of Servicing Rights**

12. Servicing rights become a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or separate purchase or assumption of the servicing. If distinct servicing rights to transferred assets exist and are retained by the reporting entity, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations. The servicing asset or liability shall be amortized into income in proportion to, and over the period of estimated servicing income (if an asset) or estimated servicing loss (if a liability). The servicing asset or liability shall be measured in a manner consistent with paragraphs 13 and 35 through 38 of FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (FAS 125).

**Sales of Future Revenues**

13. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.
Relevant Literature

14. This statement adopts portions of FAS 125, with the following modifications (FAS 125 is addressed in its entirety in SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities):

   a. This statement requires servicing rights assets to be nonadmitted;
   b. This statement does not permit sales treatment for transactions where recourse provisions exist or where “call” or “put” options exist on the transferred assets whereas GAAP would permit the recognition of the transfer as a sale under some circumstances;
   c. This statement requires debtors to provide disclosure when a secured party is permitted to sell or pledge financial assets transferred as collateral whereas FAS 125 requires the encumbered assets to be reported separately from unencumbered assets;
   d. This statement does not address transfers of financial assets accomplished in a manner other than through securitizations whereas FAS 125 does address such transfers; and
   e. Paragraph 14 is rejected as it is not applicable.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Affected by: No other pronouncements

SCOPE OF STATEMENT

SUMMARY CONCLUSION

Disclosures
Effective Date and Transition

RELEVANT ISSUE PAPERS
Investment Income Due and Accrued

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investment income due and accrued.

SUMMARY CONCLUSION

2. Investment income due shall be defined as investment income earned and legally due to be paid to the reporting entity (i.e., receivable) as of the reporting date. Investment income accrued shall be defined as investment income earned as of the reporting date but not legally due to be paid to the reporting entity until subsequent to the reporting date.

3. In general, gross investment income shall be recorded as earned and shall include investment income collected during the period, the change in investment income due and accrued, the change in unearned investment income plus any amortization (e.g., discounts or premiums on bonds, origination fees on mortgage loans, etc.).

4. Investment income due and accrued shall be recorded as an asset in accordance with SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4). An evaluation shall be made of such assets in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5), to determine whether an impairment exists. Amounts determined to be uncollectible shall be written off through the statement of operations. Then an evaluation shall be made to determine nonadmitted amounts.

5. This two step process is set forth below.
   a. Investment income due and accrued shall be assessed for collectibility. If, in accordance with SSAP No. 5, it is probable the investment income due and accrued balance is uncollectible, the amount shall be written off and shall be charged against investment income in the period such determination is made;
   b. Any remaining investment income due and accrued (i.e., amounts considered probable of collection) representing either (1) amounts that are over 90 days past due (generated by any invested asset except mortgage loans in default), or (2) amounts designated elsewhere in the codification as nonadmitted shall be considered nonadmitted assets and recognized through a direct charge to surplus in accordance with SSAP No. 4. These nonadmitted amounts shall be subject to continuing assessments of collectibility and, if determined to be uncollectible, a write-off shall be recorded in the period such determination is made in accordance with subparagraph a. above.

6. Accrued interest on mortgage loans that are in default (as defined in SSAP No. 37—Mortgage Loans) shall be recorded as Investment Income Due and Accrued when such interest is deemed collectible. Interest can be accrued on mortgage loans in default if deemed collectible; if interest is deemed uncollectible, it shall not be accrued and any previously accrued amounts are to be written off in accordance with the guidelines in paragraph 5 a. above. If a mortgage loan in default has interest 180 days past due which has been assessed as collectible, all interest shall be considered a nonadmitted asset and recognized through a direct charge to surplus as outlined in paragraph 5 b. above.
Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements.

   a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;

   b. Disclose total amount excluded.

8. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

9. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Guaranty Fund and Other Assessments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for guaranty fund and other assessments.

2. Guaranty fund assessments represent a funding mechanism employed by states to provide funds to cover policyholder obligations of insolvent reporting entities. Most states have enacted legislation establishing guaranty funds for both life and health insurance and for property and casualty insurance to provide for covered claims or to meet other insurance obligations of insolvent reporting entities in the state. Guaranty funds generally make assessments after an insolvency based upon retrospective premium writings.

3. This statement addresses other assessments including but not limited to workers compensation second injury funds and for funds that pay operating costs of an insurance department, a state guaranty fund, and/or the workers compensation board. This statement also addresses health related assessments including but not limited to state health insurance high-risk pools, health insurance small group and individual reinsurance pools, state health demographic or risk adjustment assessments.

SUMMARY CONCLUSION

4. This statement applies SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5) to guaranty fund and other assessments. SSAP No. 5 requires accrual of a liability when both of the following conditions are met:

   a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

   b. The amount of loss can be reasonably estimated.

For the purposes of subparagraph 4 b., loss generally means assessment or assessment rate. Guaranty fund and other assessments shall be charged to expense (Taxes, Licenses and Fees) and a liability shall be accrued when the above criteria are met except for certain health related assessments which shall be reported as a part of claims. Health related assessments that are reported as a part of claims instead of taxes, licenses and fees are those assessments that are designed for the purpose of spreading the risk of severe claims or adverse enrollment selection among all participating entities, and where the funds collected via the assessment are re-distributed back to the participating entities based upon the cost of specific claims, enrollment demographics, or other criteria affecting health care expenses.

5. For refunded guaranty or other fund assessments and assessments used to fund state operating expenses, reporting entities shall credit the refund or charge the assessment to expense when notification of the refund or assessment is made.

6. For guaranty fund assessments, subparagraph 4 a. is met when the insolvency has occurred, regardless of whether the assessments are based on premiums written before or after the insolvency. For purposes of applying this guidance, the insolvency shall be considered to have occurred when a reporting entity meets a state’s (ordinarily the state of domicile of the insolvent reporting entity) statutory definition of an insolvent reporting entity. In most states, the reporting entity must be declared to be
SSAP No. 35 
Statement of Statutory Accounting Principles

financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation.

7. Subparagraph 4 b. requires that the amounts can be reasonably estimated. For guaranty fund assessments, a reporting entity’s estimate of the liability shall reflect an estimate of its share of the ultimate loss expected from the insolvency less any applicable premium tax offsets and policy surcharges. Premium tax offsets or policy surcharges may only be considered in the estimate if it is probable they will be realized. Changes in the amount of the liability (or asset) as a result of the passage of time and revisions to estimates in the amount or timing of the payments shall be recorded in taxes, licenses and fees.

8. In accordance with SSAP No. 5, when the reasonable estimate of the loss is a range, the amount in the range that is considered the best estimate shall be accrued. When, in management’s opinion, no amount within management’s estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management’s estimate in the range shall be accrued. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management’s best estimate shall be accrued.

9. Because assessments are generally paid before premium tax offsets are realized or policy surcharges are collected, an asset may result, which represents a receivable for premium tax offsets that will be taken and policy surcharges which will be collected in the future. These amounts, to the extent it is probable they will be realized, meet the definition of assets, as specified in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

10. In certain circumstances, a reporting entity acts as an agent for certain state agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and assessments rests with the policyholder rather than with the reporting entity. The reporting entity’s obligation is to collect and subsequently remit the fee or assessment. These situations differ from a premium tax liability whereby the reporting entity is required to remit the premium tax whether or not the premium has been collected. When both the following conditions are met, an assessment shall not be reported in the statement of operations of a reporting entity:

a. The assessment is reflected as a separately identifiable item on the billing to the policyholder; and

b. Remittance of the assessment by the reporting entity to the state is contingent upon collection from the insured.

Disclosures

11. In the event that the criteria in paragraph 4 are not met, the notes to the financial statements shall include the disclosure required by SSAP No. 5 which indicates the nature of the assessments and states that an estimate of the liability cannot be made.

12. Refer to the preamble for further discussion regarding disclosure requirements.
Effective Date and Transition

13. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Troubled Debt Restructuring

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for troubled debt restructuring.

SUMMARY CONCLUSION

2. A troubled debt restructuring is defined as a debt restructuring whereby the creditor, for economic or legal reasons related to the debtor's financial difficulties, grants a concession to the debtor that it would not otherwise grant. That concession either stems from an agreement between the creditor and the debtor or is imposed by law or a court. Many troubled debt restructurings involve modifying terms to reduce or defer cash payments required of the debtor in the near future to help the debtor attempt to improve its financial condition and eventually be able to pay the creditor. The creditor, for example, may accept cash, other assets, or an equity interest in the debtor in satisfaction of the debt though the value received is less than the amount of the debt, because the creditor concludes the concession will maximize recovery of its investment. A debtor in a troubled debt restructuring can obtain funds from sources other than the existing creditor, if at all, only at effective interest rates (based on market prices) so high that it cannot afford to pay them. A troubled debt restructuring shall include debt that is fully satisfied by foreclosure, repossession, or other transfer of assets or by grant of equity securities by the debtor that is, in a technical sense, not restructured.

3. The determination of whether a debt restructuring is considered a troubled debt restructuring, as defined above, shall be made independently for the debtor and the creditor.

4. A debt restructuring shall not necessarily be considered a troubled debt restructuring for purposes of this statement even if the debtor is experiencing some financial difficulties. In general, a debtor that can obtain funds from sources other than the existing creditor at market interest rates at or near those for nontroubled debt is not involved in a troubled debt restructuring. For example, a troubled debt restructuring is not involved if:

   a. The fair value of cash, other assets, or an equity interest accepted by a creditor from a debtor in full satisfaction of its receivable at least equals the creditor's recorded investment in the receivable;

   b. The fair value of cash, other assets, or an equity interest transferred by a debtor to a creditor in full settlement of its payable at least equals the debtor's carrying amount of the payable;

   c. The creditor reduces the effective interest rate on the debt primarily to reflect a decrease in market interest rates in general or a decrease in the risk so as to maintain a relationship with a debtor that can readily obtain funds from other sources at the current market interest rate;

   d. The debtor issues, in exchange for its debt, new marketable debt having an effective interest rate based on its market price that is at or near the current market interest rates of debt with similar maturity dates and stated interest rates issued by nontroubled debtors; or

   e. The debtor, in connection with bankruptcy proceedings, enters into debt restructuring that results in a general restatement of most of the debtor's liabilities.
Accounting by Debtors

5. A debtor shall account for a troubled debt restructuring according to the type of the restructuring (transfer of assets in full settlement, grant of equity interest in full settlement, modification of terms or combination of types). Generally, troubled debt restructuring involving the transfer of assets or the grant of an equity interest shall be accounted for at the fair value of the assets transferred or the equity interest granted.

6. A debtor in a troubled debt restructuring involving only modification of terms of a payable—that is, not involving a transfer of assets or grant of an equity interest—shall account for the effects of the restructuring prospectively from the time of restructuring, and shall not change the carrying amount of the payable at the time of the restructuring unless the carrying amount exceeds the total future cash payments specified by the new terms. That is, the effects of changes in the amounts or timing (or both) of future cash payments designated as either interest or face amount shall be reflected in future periods. Interest expense shall be computed in a way that a constant effective interest rate is applied to the carrying amount of the payable at the beginning of each period between restructuring and maturity. The new effective interest rate shall be the discount rate that equates the present value of the future cash payments specified by the new terms (excluding amounts contingently payable) with the carrying amount of the payable.

7. If the total future cash payments specified by the new terms of a payable, including both payments designated as interest and those designated as face amount, are less than the carrying amount of the payable, the debtor shall reduce the carrying amount to an amount equal to the total future cash payments specified by the new terms and shall recognize a gain on restructuring of payables equal to the amount of the reduction. Thereafter, all cash payments under the terms of the payable shall be accounted for as reductions of the carrying amount of the payable, and no interest expense shall be recognized on the payable for any period between the restructuring and maturity of the payable.

8. A debtor shall not recognize a gain on a restructured payable involving indeterminate future cash payments as long as the maximum total future cash payments may exceed the carrying amount of the payable. Amounts designated either as interest or as face amount by the new terms may be payable contingent on a specified event or circumstance (e.g., the debtor may be required to pay specified amounts if its financial condition improves to a specified degree within a specified period). To determine whether the debtor shall recognize a gain according to the provisions of paragraphs 6 and 7, those contingent amounts shall be included in the “total future cash payments specified by the new terms” to the extent necessary to prevent recognizing a gain at the time of restructuring that may be offset by future interest expense. Thus, the debtor shall apply SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5) in which probability of occurrence of a gain contingency is not a factor, and shall assume that contingent future payments will have to be paid. The same principle applies to amounts of future cash payments that must sometimes be estimated to apply the provisions of paragraphs 6 and 7. For example, if the number of future interest payments is flexible because the face amount and accrued interest is payable on demand or becomes payable on demand, estimates of total future cash payments shall be based on the maximum number of periods possible under the restructured terms.

9. If a troubled debt restructuring involves amounts contingently payable, those contingent amounts shall be recognized as a payable and as interest expense in future periods in accordance SSAP No. 5. Thus, in general, interest expense for contingent payments shall be recognized in each period in which (a) it is probable that a liability has been incurred and (b) the amount of that liability can be reasonably estimated. Before recognizing a payable and interest expense for amounts contingently payable, however, accrual or payment of those amounts shall be deducted from the carrying amount of the
restructured payable to the extent that contingent payments included in "total future cash payments specified by the new terms" prevented recognition of a gain at the time of restructuring (paragraph 8).

**Accounting by Creditors**

10. A creditor shall account for a troubled debt restructuring according to the type of the restructuring (receipt of assets in full satisfaction, modification of terms, combination of types). Generally, troubled debt restructuring involving the transfer of assets shall be accounted for at the fair value of the assets received. Troubled debt restructuring involving modification of terms shall be accounted for at fair value (as determined by acceptable appraisal methodologies or, if applicable, the value determined in accordance with the NAIC *Purposes and Procedures of the Securities Valuation Office* (SVO Purposes and Procedures). If the restructured loan is collateral dependent, fair value shall be the fair value of the collateral. If the restructured loan is not collateral dependent, fair value shall be determined in accordance with the SVO Purposes and Procedures, if applicable, or at the present value of expected future cash flows. If the determined fair value of the loan is less than the recorded investment in the loan (including accrued interest, net deferred loan fees or costs, and unamortized premium or discount), a new cost basis shall be established at the fair value with the difference being recorded as a realized loss in the statement of operations.

11. A creditor shall account for assets, including foreclosed property and equity interests in corporations, joint ventures, or partnerships, received in satisfaction of the loan at their fair value (as determined by acceptable appraisal methodologies or, if applicable, the value determined in accordance with the SVO Purposes and Procedures) at the time of restructuring or at the book value of the loan if lower. If the fair value is less than the book value, the required writedown shall be recognized as a realized capital loss. The creditor shall reclassify the asset from loans to the appropriate asset account, such as real estate or other invested assets, at the time that the creditor obtains clear title to the asset except for mortgage loans which shall be reclassified at the beginning of the redemption period unless it is probable that the mortgage loan will be redeemed. After the troubled debt restructuring, a creditor shall account for the assets received in satisfaction of the loan consistent with the statutory guidance for similar assets.

12. Any fees received in connection with a modification of terms of a troubled debt restructuring shall be applied as a reduction of the recorded investment in the loan. All costs associated with the restructuring, including direct loan origination costs, shall be charged to expense as incurred.

**Disclosure by Debtors**

13. A debtor in a troubled debt restructuring shall disclose in the financial statements, the following information about troubled debt restructurings that have occurred during a period for which financial statements are presented:

   a. For each restructuring (or separate restructuring within a fiscal period for the same category of payables, e.g., accounts payable or subordinated debentures), a description of the principal changes in terms, the major features of settlement, or both;

   b. Aggregate gain on restructuring of payables and the related income tax effect; and

   c. Aggregate net gain or loss on transfers of assets recognized during the period.

14. A debtor shall disclose in financial statements for periods after a troubled debt restructuring the extent to which amounts contingently payable are included in the carrying amount of restructured
payables. A debtor shall also disclose total amounts that are contingently payable on restructured payables and the conditions under which those amounts would become payable or would be forgiven.

15. Refer to the preamble for further discussion regarding disclosure requirements.

**Disclosure by Creditors**

16. A creditor shall disclose in the financial statements, the following information about troubled debt restructuring as of the date of each balance sheet presented:

   a. As of the date of each statement of financial position presented, the recorded investment in the loans for which impairment has been recognized in accordance with this statement and the total allowance for credit losses related to those impaired loans;

   b. The amount of commitments, if any, to lend additional funds to debtors owing receivables whose terms have been modified in troubled debt restructuring;

   c. For each period for which results of operations are presented, the activity in the allowance for credit losses account, including the balance in the allowance for credit losses account at the beginning and end of each period, additions charged to operations, direct write-downs charged against the allowance, and recoveries of amounts previously charged off; and

   d. The creditor’s income recognition policy for interest income on an impaired loan.

17. Refer to the preamble for further discussion regarding disclosure requirements.

18. This statement is not intended to modify the requirement for life and health insurers to complete the Annual Statement exhibit disclosing long-term mortgage loans in good standing with restructured terms.

**Relevant Literature**

19. This statement adopts *FASB Statement No. 15, Accounting by Debtors and Creditors for Troubled Debt Restructurings* (FAS 15) with modification to specify that creditors shall reclassify assets obtained in a troubled debt restructuring from loans to the appropriate asset account at the time the creditor obtains clear title to the asset, except for mortgage loans which shall be reclassified at the beginning of the redemption period unless it is probable that the mortgage loan will be redeemed and with modification to require that gains and losses from extinguishment of debt be reported as capital gains or losses, and charged to operations.

20. This statement adopts paragraphs 9, 22, and 25 of *FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan* (FAS 114). Paragraphs 6 d. and 13 of FAS 114 are rejected. *FASB Statement No. 118, Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures* is adopted as it relates to troubled debt restructuring.

21. This statement adopts *FASB Technical Bulletin 81-6, Applicability of Statement 15 to Debtors in Bankruptcy Situations* and *FASB Technical Bulletin 80-2, Classification of Debt Restructuring by Debtors and Creditors*. It also adopts *FASB Emerging Issue Task Force No. 87-18, Use of Zero Coupon Bonds in a Troubled Debt Restructuring*, *FASB Emerging Issue Task Force No. 87-19, Substituted Debtors in a Troubled Debt Restructuring*, *FASB Emerging Issue Task Force No. 89-15, Accounting for a Modification of Debt Terms When the Debtor is Experiencing Financial Difficulties* consistent with the
modification to FAS 15 discussed in this statement, and *FASB Emerging Issues Task Force No. 96-22, Applicability of the Disclosures Required by FASB Statement No. 114 When a Loan Is Restructured into Two (or More) Loans.*

22. Although *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases* (FAS 91) was rejected in SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities, this statement is consistent with paragraph 14 of FAS No. 91.

23. This statement rejects *FASB Emerging Issues Task Force No. 94-8, Accounting for Conversion of a Loan into a Security in a Troubled Debt Restructuring* and *FASB Technical Bulletin 94-1, Application of Statement 115 to Debt Securities Restructured in a Troubled Debt Restructuring.*

**Effective Date and Transition**

24. This statement is effective for years beginning January 1, 2001. The provisions of this statement shall be applied to all troubled debt restructurings entered into on or after January 1, 2001.

Mortgage Loans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the accounting and reporting of mortgage loans and related fees.

SUMMARY CONCLUSION

2. A mortgage loan is defined as a debt obligation that is not a security, which is secured by a mortgage on real estate. (A security is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that (a) either is represented by an instrument issued in bearer or registered form, or if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer, (b) is of a type commonly dealt in on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment, and (c) either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations).

3. Mortgage loans meet the definition of assets as specified in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

Commitment Fees

4. Commitment (or commitment standby) fees are fees paid to the reporting entity that obligate the reporting entity to make or acquire a loan or to satisfy an obligation of another party under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the loan is granted. If the loan is not granted, then the fees shall be recorded as investment income by the reporting entity when the commitment is no longer available.

5. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 9 over the life of the loan as an adjustment to the investment income on the loan. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Loan Origination Fees

6. Loan origination fees are defined as fees charged to the borrower in connection with the process of originating, refinancing, or restructuring a loan. The term includes, but is not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to a lending transaction. Nonrefundable loan origination fees shall not be recorded until received in cash. Nonrefundable fees representing points shall be deferred as part of the loan balance and amortized over the life of the loan in accordance with paragraph 9 below. Nonrefundable fees other than points shall be recorded in income upon receipt.
Loan Origination, Acquisition, and Commitment Costs

7. All costs incurred in connection with originating a loan, acquiring purchased loans or committing to purchase loans shall be charged to expense as incurred.

Initial Investment

8. For mortgage loans originated by the reporting entity, the initial investment in mortgage loans shall be recorded at the principal amount of the loan net of any amounts deferred under the provisions of paragraphs 5 and 6. For mortgage loans purchased by a reporting entity, the initial investment shall be recorded as the amount paid to the seller. Accordingly, there may be a premium or discount on such loans resulting from a difference between the amount paid and the principal amount.

Amortization

9. Premiums and discounts on acquired loans, and mortgage interest points and commitment fees (if such qualify for amortization as described in paragraphs 5 and 6) shall be recognized as an adjustment of yield over the life of the loan (i.e., the period of time until total principal proceeds of the loan are received in cash) to produce a constant effective yield each year to maturity. If the reporting entity holds a large number of similar loans for which the prepayments of principal are probable, (probable is used in the same context as in paragraph 5 in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets, which defines probable as the future event or events are likely to occur), and the timing and amount can be reasonably estimated, the reporting entity shall include estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. The amount recognized as an adjustment of yield shall be credited or charged to interest income in the calculation of net investment income.

Prepayments

10. Payments received in advance of due dates may produce prepaid interest which shall be recorded as a liability, Unearned Investment Income, on the reporting entity’s balance sheet. The portion of the payments received in advance of due dates that represents prepayments of principal shall be recorded as a reduction in the mortgage loan balance.

11. A mortgage loan may provide for a prepayment penalty or acceleration fee in the event the loan is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

Interest Income

12. Interest income shall be recorded as earned and shall be included in investment income in the Summary of Operations. Interest income shall include interest collected, the change in interest income due and accrued, and the change in unearned interest income as well as amortization of premiums, discounts, and deferred fees as specified in paragraph 9.

Accrued Interest

13. Reporting entities that use servicing agents for their mortgage loans shall report the Interest Due and Accrued asset on the balance sheet consistently with the income statement treatment of the charge for servicing costs. If interest income is reported net of servicing costs, which is usual when the servicing agent fee is based on a percentage retention of each interest payment, then the interest receivable in the balance sheet shall be net of the related servicing costs. If interest is reported gross, with the servicing
costs reported as an expense item, then interest due and accrued shall be reflected as an asset at the gross amount, with an appropriate liability to reflect the related servicing cost accrual.

14. When a loan is determined to be in default (per the contractual terms of the loan), the accrued interest on the loan shall be recorded as investment income due and accrued if deemed collectible. If a loan in default has any investment income due and accrued which is 180 days past due and collectible, the investment income shall continue to accrue, but all interest related to the loan is to be reported as a nonadmitted asset. If accrued interest on a mortgage loan in default is not collectible, the accrued interest shall be written off immediately and no further interest accrued.

15. Contingent interest represents income generated through the occurrence of specific economic events in relation to the borrower. For example, contingent interest may become payable upon the attainment of a given level of cash flow or income. Contingent interest may be reported as income when received or accrued. The proper accrual of such income does, however, require an analysis of the applicable provisions in the underlying agreement and the verification that the prerequisite conditions have been met.

Impairments

16. A mortgage loan shall be considered to be impaired when, based on current information and events, it is probable that a reporting entity will be unable to collect all amounts due according to the contractual terms of the mortgage agreement. According to the contractual terms means that both the contractual principal payments and contractual interest payments of the mortgage loan will be collected as scheduled in the mortgage agreement. A reporting entity shall measure impairment based on the fair value (as determined by acceptable appraisal methodologies) of the collateral less estimated costs to obtain and sell. The difference between the net value of the collateral and the recorded investment in the mortgage loan shall be recognized as an impairment by creating a valuation allowance with a corresponding charge to unrealized loss or by adjusting an existing valuation allowance for the impaired loan with a corresponding charge or credit to unrealized gain or loss. Subsequent to the initial measurement of impairment, if there is a significant change (increase or decrease) in the net value of the collateral, the reporting entity shall adjust the valuation allowance; however, the net carrying amount of the loan shall at no time exceed the recorded investment in the loan. For reporting entities required to maintain an asset valuation reserve (AVR), the unrealized gain or loss on impairments shall be included in the calculation of the AVR. If the impairment is other than temporary, a direct write down shall be recognized as a realized loss, and a new cost basis is established. This new cost basis shall not be changed for subsequent recoveries in value. Mortgage loans for which foreclosure is probable shall be considered permanently impaired.

17. For loans that are in default, being voluntarily conveyed, or being foreclosed, the carrying value shall be adjusted for additional expenses, such as insurance, taxes, and legal fees that have been incurred to protect the investment or to obtain clear title to the property to the extent that these amounts are deemed to be recoverable from the ultimate disposition of the property. However, if these costs cannot reasonably be expected to be recovered, they shall not be added to the carrying value, and the costs shall be expensed.

Escrow Payments

18. Amounts paid to the reporting entity by the mortgagor to cover future tax payments, insurance premiums, and other costs related to the property requires the creation of escrow accounts in the general ledger to record these liabilities. If these amounts are held by the servicing agents, they shall be reported on the reporting entity's balance sheet both as an asset and as a liability when they produce income for
the reporting entity. This may occur if the servicing agent invests the escrow funds and is required to remit the income (or portion thereof) to the reporting entity.

**Construction Loans**

19. A construction loan is defined as a mortgage loan of less than three years in term, made for financing the cost of construction of a building or other improvement to real estate, which is secured by the real estate. The principal amount of a construction loan shall be the amount of funds disbursed to the borrower. If, in accordance with the terms of the contract, interest is deferred until the maturity of the loan, the accrued interest shall be included in the balance of the loan outstanding. The impairment test in paragraph 16 shall be applied to all construction loans, regardless of whether there are any defaults. Accordingly, construction loans shall not be reported at an amount greater than the fair value of the property. The percentage of completion of the property shall be considered in determining fair values of property securing construction loans.

**Disclosures**

20. The following disclosures shall be made in the financial statements:

   a. Fair values in accordance with SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments (SSAP No. 27);

   b. Concentrations of credit risk in accordance with SSAP No. 27;

   c. Description of the valuation basis of the mortgage loans;

   d. Information on the minimum and maximum rates of interest received for new loans made by category;

   e. Maximum percentage of any one loan to the value of security at the time of the loan;

   f. Total carrying amount of mortgages with interest 180 days past due and the amount of interest past due thereon. The carrying amount and number of mortgage loans where interest has been reduced, by percent reduced; and

   g. Taxes, assessments, and amounts advanced not included in the mortgage loan total.

21. The following additional disclosures shall be made for impaired loans:

   a. The total recorded investment in impaired loans at the end of each period and (i) the amount of that recorded investment for which there is a related allowance for credit losses determined in accordance with this statement and the amount of that allowance and (ii) the amount of that recorded investment for which there is no related allowance for credit losses determined in accordance with this statement;

   b. The policy for recognizing interest income on impaired loans, including how cash receipts are recorded; and

   c. For each period for which results of operations are presented, the average recorded investment in the impaired loans during each period, the related amount of interest income recognized during the time within that period that the loans were impaired, and,
unless not practicable, the amount of interest income recognized using a cash-basis method of accounting during the time within that period that the loans were impaired.

22. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure requirements of paragraphs 20 a. and 20 b. shall be included in the annual audited statutory financial reports only.

Relevant Literature

23. This statement adopts FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan (FAS 114), and FASB Statement No. 118, Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures, an amendment of FASB Statement No. 114, for collateral dependent loans with the following modifications:

a. Impairment shall be measured based on the fair value of the collateral less costs to obtain and sell, whereas that is just one option under FAS 114; and

b. The reporting entity is required to record any other than temporary impairment as a realized loss and shall not record subsequent recoveries in fair value.

24. This statement also adopts FASB Emerging Issues Task Force Issue No. 84-19, Mortgage Loan Payment Modifications.

25. This statement rejects FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases, FASB Emerging Issues Task Force No. 88-17, Accounting for Fees and Costs Associated with Loan Syndications and Loan Participations, and AICPA Practice Bulletin 6, Amortization of Discounts on Certain Acquired Loans.

Effective Date and Transition

26. This statement is effective for years beginning January 1, 2001. Initial recognition of the impairment losses resulting from the application of this statement shall apply to mortgage loans held at January 1, 2001, and be based on management’s best estimates as of that date. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections or Errors.

Acquisition, Development and Construction Arrangements

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for real estate acquisition, development and construction (ADC) arrangements and provides guidance on when to account for ADC arrangements as mortgage loans and when to account for ADC arrangements as investments in real estate or real estate joint ventures.

SUMMARY CONCLUSION

2. ADC arrangements shall be defined as lending agreements that are made to the owner of property to finance the acquisition, development and construction of real estate projects on the property in which the lender participates in the expected residual profits. Expected residual profit is the amount of profit, whether called interest or another name (e.g., equity kicker) above a reasonable amount of interest and fees expected to be earned by the lender. ADC arrangements shall include participations in loans and purchased loans that meet that definition of ADC arrangements.

3. If the lender is expected to receive over 50% of the expected residual profits of the project, the ADC arrangement shall be classified and accounted for as an investment in real estate in accordance with SSAP No. 40—Real Estate Investments. If the lender is expected to receive 50% or less of the expected residual profits, the ADC arrangement shall be classified and accounted for as a loan or as a real estate joint venture, depending on the circumstances.

4. If any of the characteristics in paragraph 9 b. through 9 e. of AcSEC Practice Bulletin 1, “Exhibit I, ADC Arrangements” (PB1), or if a qualifying personal guarantee (as defined in PB1) is present, the ADC arrangement shall be classified and accounted for as a construction loan in accordance with SSAP No. 37—Mortgage Loans. Otherwise, the ADC arrangement shall be classified and accounted for as a real estate joint venture in accordance with SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies.

5. The factors that are evaluated in determining the accounting treatment at inception may subsequently change for some ADC arrangements, for example, as a result of a renegotiation of the terms. Consequently, the accounting treatment for an ADC arrangement shall be periodically reassessed, as described in paragraph 20 of PB1. Any changes in classification shall result in a reclassification of the asset at the amount the asset should be reported at under its new classification with the net effect, if any, charged to income in the period that the change in classification is made.

6. Regardless of whether an ADC arrangement is accounted for as an investment in real estate, a joint venture, or a mortgage loan, the ADC arrangement meets the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets and is an admitted asset to the extent it conforms to the requirements of this statement.

7. ADC arrangements may involve related parties, in which case, SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties shall also be followed.

Relevant Literature

8. This statement adopts PB1, “Exhibit I, ADC Arrangements” and FASB Emerging Issues Task Force No. 86-21, Application of the AICPA Notice to Practitioners regarding Acquisition, Development, and Construction Arrangements to Acquisition of an Operating Property.
Effective Date and Transition

9. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Reverse Mortgages

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for reverse mortgages.

SUMMARY CONCLUSION

2. A reverse mortgage loan is defined as a non-recourse loan with the following characteristics:
   a. It is secured by a mortgage against the primary residence of the borrower;
   b. It guarantees a stream of cash disbursements to the borrower, either for the life of the borrower with no limit or up to a set percentage of the value of the residence or is a line of credit which the borrower can draw upon as needed; and
   c. It has no maturity date and requires no repayment until one of the following events occur:
      i. The borrower dies;
      ii. The borrower sells the residence;
      iii. The residence ceases to be the borrower’s primary residence; or
      iv. The borrower terminates the loan by paying back the outstanding balance.

3. A reverse mortgage meets the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets and is an admitted asset to the extent it conforms to the requirements of this statement. Reverse mortgages shall be recorded as an other invested asset on the reporting entity’s statement of financial position and Schedule BA, Other Long-Term Invested Assets, of the Annual Statement.

4. To be considered admitted assets, investments in reverse mortgages are limited to first lien mortgages only.

5. All expenses associated with acquiring reverse mortgages shall be recognized immediately as investment expense.

6. Revenue associated with originating or otherwise acquiring reverse mortgages, including non-refundable fees, shall be amortized to investment income on a straight line basis over the period from inception to the expected maturity date.

7. Generally, fees are not paid by the borrower at the time of closing but become payable when the outstanding balance of the reverse mortgage becomes due. In these situations, no accounting entries are recorded at the time of closing. Investment income shall be recognized and the outstanding balance of the loan shall increase as the fees are amortized.

8. If fees are paid by the borrower at the time of closing, a liability shall be established. Investment income shall be recognized and the liability shall decrease as the fees are amortized.

9. Interest is payable by the borrower when the outstanding balance of the reverse mortgage becomes due. Accrued interest shall be calculated on the outstanding balance of the loan on a monthly
basis. As it is earned, accrued interest shall be recorded to investment income and added to the
outstanding balance of the loan.

10. The outstanding balance of the reverse mortgage shall include the accumulation of amounts
disbursed, accrued interest, and amortized origination fees (i.e., origination fees not paid by the borrower
at the time of closing). Neither the fair market value of the underlying collateral nor the obligation for
future cash payments guaranteed by the lender are recorded.

11. The lender’s equity in the appreciation of the property, if any, is not recorded until realized upon
the sale of the home.

Valuation and Impairment

12. The major categories of risk affecting reverse mortgages are:

a. Mortality risk—risk of loan payments extending beyond the borrower’s original
projected life expectancy. Since most reverse mortgages guarantee a continuing monthly
payment to the borrower, there is the possibility that the borrower will collect cash
payments and accrue interest exceeding the ultimate disposal value of the collateral. In
situations where loan payments extend beyond the borrower’s original projected life
expectancy, the reporting entity will experience a diminished yield, and may experience
a loss. Reverse mortgage contracts shall be combined into groups which are of sufficient
size to provide an actuarially and statistically credible basis for estimating life
expectancy to project future cash flows;

b. Collateral risk—risk of deterioration in the value of the collateral such that it is
insufficient to cover the loan balance. This risk shall be evaluated loan-by-loan and is
based on information obtained from periodic real estate appraisals and other pertinent
information;

c. Interest rate risk—risk of interest rates rising on adjustable rate reverse mortgages to the
extent that accrued interest creates a collateral risk.

13. Reverse mortgages subject to the risks addressed in paragraph 12 shall be reported net of an
appropriate actuarially calculated valuation reserve. Assumptions shall be applied consistently to similar
loans. The assumptions, cash flow projections, and evaluation of risk shall be reviewed and updated at
least annually. The fair market value of the underlying collateral and the obligation for future cash
payments guaranteed by the lender shall be considered in cash flow projections. Future appreciation in
property value beyond the valuation date shall not be included in the projection of cash receipts.

14. If the impairment is temporary, any resulting adjustment shall be made to the valuation reserve
(contra-asset) and unrealized gains and losses. Subsequent to the initial measurement of impairment, if
there is a significant change (increase or decrease) in the risk factors affecting the value of the mortgage,
the reporting entity shall adjust the valuation allowance in accordance with paragraph 13; however, the
net carrying amount of the loan shall at no time exceed the recorded investment in the loan. The term
recorded investment in the loan is distinguished from net carrying amount of the loan because the latter
term is net of the valuation allowance, while the former term is not. The recorded investment (including
accrued interest, net deferred loan fees, and unamortized premium or discount) in the loan does,
however, reflect any direct write down of the investment. If the impairment is other than temporary, the
investment shall be written down to fair value as the new cost basis and the amount of the write down
shall be accounted for as a realized loss. The new basis shall not be changed for subsequent recoveries in
fair value. A reverse mortgage shall be considered to be impaired when, based on current information
and events, it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the reverse mortgage. "According to the contractual terms" means that both the contractual principal payments and contractual interest payments of the loan will be collected as specified in the reverse mortgage agreement.

Disclosures

15. The following disclosures shall be made for reverse mortgages in the financial statements:
   a. A description of the reporting entity's accounting policies and methods, including the statistical methods and assumptions used in calculating the reserve;
   b. General information regarding the reporting entity's commitment under the agreement;
   c. The reserve amount which is netted against the asset value;
   d. Investment income or loss recognized in the period as a result of the re-estimated cash flows.

16. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

17. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Real Estate Investments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for real estate investments.

SUMMARY CONCLUSION

2. Real estate investments are defined as directly-owned real estate properties. These may be acquired in exchange for consideration (including but not limited to cash, a contract for deed or mortgage, or other non-cash consideration), obtained through foreclosure or voluntary conveyance in satisfaction of a mortgage loan, or received as contributed surplus. Real estate investments meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

3. Real estate investments include certain acquisition, development and construction arrangements (ADC) as defined in SSAP No. 38—Acquisition, Development and Construction Arrangements (SSAP No. 38).

4. Real estate investments shall be reported net of encumbrances in the following balance sheet categories, with parenthetical disclosure of the amount of related encumbrances:

   a. Properties occupied by the company;
   b. Properties held for the production of income; and
   c. Properties held for sale.

5. Any real estate which is owned by and is more than 50% occupied by the reporting entity and its affiliates shall be considered property occupied by the company. “More than 50% occupied” shall mean that the square footage occupied by the reporting entity and its affiliates totals more than 50% of the rentable square footage of the property, including common areas. This shall include property occupied by the company which is not necessarily home office (e.g., claims processing, data processing and branch centers). Property which does not meet this 50% requirement shall be classified as property held for the production of income or property held for sale, consistent with paragraphs 9 and 10.

6. Encumbrances represent outstanding mortgages or other debt related to the real estate investment and any unpaid accrued acquisition or construction costs. Interest expense shall be included in investment expenses.

7. The cost of real estate represents the fair market value of the consideration exchanged plus any costs incurred to place the real estate asset in usable condition, including but not limited to, brokerage fees, legal fees, demolition, clearing and grading, fees of architects and engineers, any additional expenditures made for equipment and fixtures that are made a permanent part of the structure and certain interest costs as provided for in SSAP No. 44—Capitalization of Interest. Where cost includes both land and building, the cost shall be allocated among the assets purchased based on the relative values determined using appraisals, as described in paragraph 11 below. The cost shall be reduced by any amounts received for sales of rights or privileges in connection with the property or by any cash recoveries received after acquiring title to the property. The cost of real estate which has been foreclosed upon shall be initially established in accordance with SSAP No. 36—Troubled Debt Restructuring. The cost of contributed real estate shall be initially established in accordance with SSAP No. 28—Nonmonetary Transactions as a nonreciprocal transfer.
8. The cost of property included in real estate investments, other than land, shall be depreciated over the estimated useful life, not to exceed fifty years. Depreciation expense shall be included in investment expenses.

9. Properties occupied by the company and properties held for the production of income shall be carried at depreciated cost less encumbrances unless events or circumstances indicate the carrying amount of the asset (amount prior to reduction for encumbrances) may not be recoverable. Paragraph 5 of FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of (FAS 121), provides examples of events or changes in circumstances which indicate that the recoverability of the carrying amount of properties occupied by the company or properties held for the production of income should be assessed. If the events or changes in circumstances set forth in paragraph 5 of FAS 121 are present or if other events or changes in circumstances indicate that the carrying amount of properties occupied by the company or properties held for the production of income may not be recoverable, the entity shall determine whether an impairment loss must be recognized in accordance with paragraph 6 of FAS 121. Property occupied by the company shall be evaluated using the asset grouping approach of paragraph 8 of FAS 121. An impairment loss is measured as the amount by which the individual carrying amounts exceed the fair value of properties occupied by the company or properties held for the production of income. Fair value is determined in accordance with paragraph 11 of this statement. If the fair value of the asset is less than the carrying value, the asset shall be written down to the fair value thereby establishing a new cost basis. The new cost basis shall not be changed for subsequent recoveries in fair value. The adjustment shall be recorded in the statement of operations as a realized loss.

10. Properties that the reporting entity has the intent to sell or is required to sell shall be classified as properties held for sale and carried at the lower of depreciated cost or fair value less encumbrances and estimated costs to sell the property consistent with paragraph 16 of FAS 121. The intent to sell a property exists when management, having the authority to approve the action, has committed to a plan to dispose of the asset, either by sale or abandonment. Fair value of the asset shall be determined in accordance with paragraph 11 of this statement. Subsequent revisions to the fair value of the asset shall be accounted for in accordance with paragraph 17 of FAS 121.

11. The current fair value of real estate shall be determined on a property by property basis (i.e., increases in the fair value of one property shall not be used to offset declines in fair value of another) and shall be defined as the price that a property would bring in a competitive and open market under all conditions requisite to a fair sale (i.e., the buyer and seller acting prudently and knowledgeably with the price not affected by any undue stimulus). If market quotes are unavailable, estimates of fair value shall be determined by an appraisal (internal or third party), which is based upon an evaluation of all relevant data about the market, considering the following:

   a. A physical inspection of the premises;
   b. The present value of future cash flows generated by the property (Discounted Cash Flows), or capitalization of stabilized net operating income (Direct Capitalization);
   c. Current sales prices of similar properties with adjustments for differences in the properties (Sales Comparison Approach);
   d. Costs to sell the property if the reporting entity does not have the intent or ability to hold the real estate as an investment; and
   e. Replacement costs of the improvements, less depreciation, plus the value of the land (Cost Approach).
12. All appraisals obtained to determine fair market value of real estate investments shall be no more than five years old. However, if conditions indicate there has been a significant decrease in the fair market value of a property, a current appraisal shall be obtained. Additionally, appraisals shall be obtained for real estate investments at the time of foreclosure or contribution. Contributed real estate shall be supported by an independent third party appraisal at the date of contribution. If any of the previous conditions exist but an appraisal has not been obtained, the related property shall be considered a nonadmitted asset until the required appraisals are obtained.

Income, Expenses, and Capital Improvements

13. Rental income on real estate leased is addressed in SSAP No. 22—Leases, which requires that rental income be included in investment income. Expenses incurred in operating the real estate investment, including but not limited to, real estate taxes, utilities, and ordinary repair and maintenance, shall be charged to expense as incurred and included in investment expenses.

14. Expenditures that are necessary to put the asset back into good operating condition or to keep it in good operating condition, shall be charged to expense as incurred. Expenditures that add to or prolong the life of the property shall be added to the cost of the real estate (capitalized) and depreciated over the remaining estimated useful life of the property.

15. A reporting entity shall include in both its income and expenses an amount for rent relating to its occupancy of its own buildings. The amount recorded shall be at a rate comparable to rent received from others and/or rental rates of like property in the same area. If this is unavailable, it shall be derived from consideration of the repairs, expenses, taxes, and depreciation incurred, plus interest added at an average fair rate on the book value of the reporting entity’s investment in its home office building.

Sale of Real Estate

16. Recognition of profit on sales of real estate investments shall be accounted for in accordance with FASB Statement No. 66, Accounting for Sales of Real Estate (FAS 66), except as modified in paragraph 17 of this statement, FASB Emerging Issues Task Force No. 87-9, Profit Recognition on Sales of Real Estate with Insured Mortgages or Surety Bonds (EITF 87-9), and FASB Emerging Issues Task Force No. 87-29, Exchange of Real Estate Involving Boot (EITF 87-29). Profit shall be recognized in full when real estate is sold, provided (a) the profit is determinable, that is, the collectibility of the sales price is reasonably assured or the amount that will not be collectible can be estimated, and (b) the earnings process is virtually complete, that is, the seller is not obliged to perform significant activities after the sale to earn the profit. Unless both conditions exist, recognition of all or part of the profit shall be postponed. Profit shall not be recognized by the full accrual method until all of the following criteria are met:

   a. A sale is consummated;
   b. The buyer’s initial and continuing investments are adequate to demonstrate a commitment to pay for the property;
   c. The seller’s receivable is not subject to future subordination; and
   d. The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is in substance a sale and does not have a substantial continuing involvement with the property after the sale.
17. The calculation of the buyer's initial investment specified in paragraph 9 of FAS 66 shall be modified to reflect that buyer's notes must be supported by letters of credit from institutions that are listed by the Securities Valuation Office of the National Association of Insurance Commissioners as meeting credit standards to be included in determining the buyer's initial investment. Any profit or loss is considered a realized gain or loss in the year of the sale in accordance with FAS 66.

Real Estate Projects Under Development

18. Costs and initial rental operations of real estate projects under development, which include ADC arrangements accounted for as real estate under the provisions of SSAP No. 38, shall be accounted for in accordance with FASB Statement No. 67, Accounting for Costs and Initial Rental Operations of Real Estate Projects (FAS 67). Costs incurred in connection with real estate projects shall be expensed as incurred unless the criteria established in FAS 67 are met. The admitted value of a real estate project, or parts thereof, held for sale or development and sale shall not exceed the estimated selling price in the ordinary course of business less estimated costs of completion (to stage of completion assumed in determining the selling price), holding, and disposal (net realizable value). If costs exceed net realizable value, capitalization of eligible costs shall continue, however, an allowance shall be provided to reduce the admitted value to estimated net realizable value.

Disclosures

19. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

20. This statement adopts FAS 66, with modification to paragraph 9 to indicate that only letters of credit from institutions listed by the Securities Valuation Office shall be included in determining the buyer's initial investment. Additionally, as they relate to FAS 66, the following are adopted: FASB Emerging Issues Task Force Issue No. 86-6, Antispeculation Clauses in Real Estate Sales Contracts, FASB Emerging Issues Task Force Issue No. 87-9, Profit Recognition on Sales of Real Estate with Insured Mortgages or Surety Bonds, FASB Emerging Issues Task Force No. 87-29, Exchange of Real Estate Involving Boot, FASB Emerging Issues Task Force No. 88-12, Transfer of Ownership Interest as Part of Down Payment under FASB Statement No. 66, and FASB Emerging Issues Task Force No. 88-24, Effect of Various Forms of Financing under FASB Statement No. 66.

21. This statement adopts FASB Emerging Issues Task Force No. 84-17, Profit Recognition on Sales of Real Estate with Graduated Payment Mortgages or Insured Mortgages, FASB Emerging Issues Task Force No. 89-13, Accounting for the Cost of Asbestos Removal, FASB Emerging Issues Task Force No. 89-14, Valuation of Repossessed Real Estate, FASB Emerging Issues Task Force No. 90-8, Capitalization of Costs to Treat Environmental Contamination, and FASB Emerging Issues Task Force No. 95-23, The Treatment of Certain Site Restoration/Environmental Exit Costs When Testing a Long-Lived Asset for Impairment.

22. This statement adopts FAS 121 for real estate investments except for paragraphs 13, 14 c. and 14 d. which are rejected in SSAP No. 68—Business Combinations and Goodwill. This statement also adopts FAS 67, AICPA Statement of Position 92-1, Accounting for Real Estate Syndication Income, and AICPA Statement of Position 92-3, Accounting for Foreclosed Assets.

23. This statement rejects paragraph 52 of FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises and Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, "Chapter 10, Taxes, Section A—Real Estate and Personal Property Taxes."
Effective Date and Transition

24. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Correction of Errors.

Surplus Notes

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for issuers and holders of surplus notes.

SUMMARY CONCLUSION

Issuers of Surplus Notes

2. Reporting entities sometimes issue instruments that have the characteristics of both debt and equity. These instruments are commonly referred to as surplus notes, the term used herein, but are also referred to as surplus debentures or contribution certificates. These instruments are used for various reasons, including but not limited to:
   a. Providing regulators with flexibility in dealing with problem situations to attract capital to reporting entities whose surplus levels are deemed inadequate to support their operations;
   b. Providing a source of capital to mutual and other types of non-stock reporting entities who do not have access to traditional equity markets for capital needs;
   c. Providing an alternative source of capital to stock reporting entities, although not for the purpose of initially capitalizing the reporting entity.

3. Surplus notes issued by a reporting entity that are subject to strict control by the commissioner of the reporting entity’s state of domicile and have been approved as to form and content shall be reported as surplus and not as debt only if the surplus note contains the following provisions:
   a. Subordination to policyholders;
   b. Subordination to claimant and beneficiary claims;
   c. Subordination to all other classes of creditors other than surplus note holders; and
   d. Interest payments and principal repayments require prior approval of the commissioner of the state of domicile.

4. Proceeds received by the issuer must be in the form of cash or other admitted assets having readily determinable values and liquidity satisfactory to the commissioner of the state of domicile.

5. Interest shall not be recorded as a liability nor an expense until approval for payment of such interest has been granted by the commissioner of the state of domicile. All interest, including interest in arrears, shall be expensed in the statement of operations when approved for payment. Unapproved interest shall not be reported through operations, shall not be represented as an addition to the principal or notional amount of the instrument, and shall not accrue further interest, i.e., interest on interest.

6. As of the date of approval of principal repayment by the commissioner of the state of domicile, the issuer shall reclassify such approved payments from surplus to liabilities.

7. Costs of issuing surplus notes (e.g., loan fees and legal fees) shall be charged to operations when incurred.
8. Discount or premium, if any, shall be reported in the balance sheet as a direct deduction from or addition to the face amount of the note. Such discount or premium shall be charged or credited to the statement of operations concurrent with approved interest payments on the surplus note and in the same proportion or percentage as the approved interest payment is to the total estimated interest to be paid on the surplus note.

Holders of Surplus Notes

9. Investments in surplus notes meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

10. Surplus notes shall be accounted for in accordance with SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities (SSAP No. 26). Holders of surplus notes shall follow Securities Valuation Office valuation procedures. The admitted asset value of a surplus note shall not exceed the amount that would be admitted if the instrument was considered an equity instrument and added to any other equity investments in the issuer held directly or indirectly by the holder of the surplus note.

11. Only interest that has been approved by the issuer’s domiciliary commissioner shall be accrued as income by a holder of surplus notes in a manner consistent with SSAP No. 26.

Disclosures

12. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:

a. Date issued;
b. Description of the assets received;
c. Holder of the note or if public the names of the underwriter and trustee;
d. Amount of note;
e. Carrying value of note;
f. The rate at which interest accrues;
g. Maturity dates or repayment schedules, if stated;
h. Unapproved interest and/or principal;
i. Interest and/or principal paid in the current year;
j. Total interest and/or principal paid on surplus notes;
k. Subordination terms;
l. Liquidation preference to the reporting entity’s common and preferred shareholders;
m. The repayment conditions and restrictions.
13. In addition to the above, a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to rule 144A under the Securities Act of 1933), and any holder of 10% or more of the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

Relevant Literature

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The provisions of paragraph 3, which are required for an instrument to qualify as a surplus note, apply to all surplus notes issued or amended after December 12, 1991. Surplus notes issued on or before December 12, 1991, shall not be required to meet the provisions of paragraph 3 in order to be accounted for as a surplus note.

Sale of Premium Receivables

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the sale or factoring of premium receivables.

SUMMARY CONCLUSION

2. For purposes of this statement, receivables shall only include amounts due to the reporting entity for premium receivables (i.e., uncollected premium, agent’s balances, and bills receivable).

3. A transfer of receivables can take the form of a transfer with recourse or a transfer without recourse:
   
a. Recourse means that the transferee has the right to receive payment from the transferor of those receivables for (i) failure of the debtors to pay when due, (ii) the effects of prepayments, or (iii) adjustments resulting from defects in the eligibility of the transferred receivables, for example defects in the legal title of the transferred receivables. When the transferor has the right to repurchase (a call) or the transferee has the right to require the transferor to repurchase (a put) the transferred receivables, the transfer shall be considered to have recourse:

b. Without recourse means that the transferor has surrendered all of the future economic implications of the risks and rewards embodied in the transferred receivables.

4. A transfer of receivables with recourse shall not be recognized as a sale. A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received.

5. If a transfer qualifies to be recognized as a sale, the difference between (a) the sales price and (b) the receivables transferred shall be recognized as a gain or loss. If receivables are sold with servicing retained and the stated servicing fee is less than a current (normal) servicing fee rate (a servicing fee rate that is representative of servicing fee rates most commonly used in comparable servicing agreements covering similar types of receivables) or no servicing fee is specified, the gain or loss recognized by the sale of receivables shall be adjusted to recognize the deviation of the stated servicing fee rate from the commonly used servicing fee rate and a liability shall be established to provide for a normal servicing fee in each subsequent servicing period, which shall not be less than the estimated servicing costs. When the stated servicing fee is greater than a normal servicing fee the gain or loss shall not be adjusted and the excess servicing fee revenues shall not be recorded currently but shall be recorded when realized.

6. If the conditions of subparagraph 3 b. are not met, or the transfer is for other than cash, the receivables shall remain on the transferor’s financial statements. A liability shall be established in an amount equal to the greater of the carrying amount of the receivables transferred or the amount of the proceeds received. To the extent that the proceeds received are less than the carrying amount of receivables transferred, a loss shall be recorded. The carrying amount of the receivable balance shall be evaluated at each reporting period and adjusted for any uncollectible amounts. The liability shall be derecognized as the transferee receives cash. When the proceeds received are greater than the receivables transferred, the liability shall be derecognized on a pro rata basis as the receivables are collected.
Disclosures

7. For transfers of receivables reported as sales, the transferor's financial statements shall disclose:
   a. The proceeds to the transferor; and
   b. The gain or loss recorded on the sale.

8. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

9. This statement rejects paragraph 83 of FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (FAS 125) to the extent that it permits sales recognition for sales of receivables with recourse provisions. FAS 125 is addressed in its entirety in SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities.

Effective Date and Transition

10. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Loan-backed and Structured Securities

Status

Type of Issue: Common Area

Issued: Initial Draft

Effective Date: January 1, 2001

Affects: No other pronouncements

Affected by: No other pronouncements
This page is intentionally left blank
Loan-backed and Structured Securities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investments in loan-backed securities and structured securities. In this statement loan-backed securities and structured securities are collectively referred to as loan-backed securities.

SUMMARY CONCLUSION

2. Loan-backed securities are defined as pass-through certificates, collateralized mortgage obligations (CMOs), and other securitized loans not included in structured securities, as defined below, for which the payment of interest and/or principal is directly proportional to the interest and/or principal received by the issuer from the mortgage pool or other underlying securities.

3. Structured securities are defined as loan-backed securities which have been divided into two or more classes for which the payment of interest and/or principal of any class of securities has been allocated in a manner which is not proportional to interest and/or principal received by the issuer from the mortgage pool or other underlying securities.

4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring parent organization. Mortgage loans or other securities securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer’s obligation has been fully satisfied. The investor can look only to the issuer’s assets (primarily the trusteed assets or third parties such as insurers or guarantors) for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying mortgage loans. Some sponsors do guarantee the performance of the underlying loans.

5. Loan-backed securities meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

Acquisitions and Sales

6. At acquisition, loan-backed securities shall be reported at cost, including brokerage and related fees. Cost shall not exceed market value. Acquisitions and dispositions shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement loan-backed securities which shall be recorded on the funding date. For securities where all information is not known as of the trade date (e.g., actual payment factors and specific pools), a reporting entity shall make its best estimate based on known facts.

Amortization

7. Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method and shall be recorded as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed securities is expected to occur, not the stated maturity period.
Balance Sheet Amount

8. Loan-backed securities shall be valued and reported in accordance with the NAIC *Purposes and Procedures of the Securities Valuation Office* and the NAIC *Valuations of Securities* manual prepared by the Securities Valuation Office. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed securities shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair market value. For reporting entities that do not maintain an AVR, loan-backed securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; loan-backed securities that are designated medium quality, low quality and lower quality (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair market value.

Changes in Valuation

9. Prepayments are a significant variable element in the cash flow of loan-backed securities because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can significantly lengthen the duration of the security.

10. Changes in prepayment assumptions and the resulting cash flows shall be reviewed periodically. For securities that have the potential for loss of a portion of the original investment due to changes in interest rates or prepayments, the review shall be performed at least quarterly. For other securities, the review shall be performed at least annually. Examples of securities that have the potential for loss of a portion of the original investment include CMO residuals and mortgage-backed interest-only certificates. For these securities, an effective yield or internal rate of return is calculated at acquisition based on the purchase price and anticipated future cash flows.

11. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.

12. Loan-backed securities shall be revalued using the new prepayment assumptions using either the prospective or retrospective adjustment methodologies, consistently applied by type of securities.

13. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the undiscounted anticipated cash flow is less than the carrying amount of the investment.
14. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Impairment

15. Regardless of whether a reporting entity is using a prospective or retrospective method, if the revaluation based on new prepayment assumptions results in a negative yield (i.e., undiscounted estimated future cash flows are less than the current book value), an other than temporary impairment shall be considered to have occurred. If it is determined that a decline in the fair market value of a loan-backed security is other than temporary, the cost basis of the security shall be written down to the undiscounted estimated future cash flows and the amount of the write down shall be accounted for as a realized loss (which shall be included in Interest Maintenance Reserve (IMR), if applicable). The new cost basis shall not be changed for subsequent recoveries in fair value. Therefore, the prospective adjustment method must be utilized for periods subsequent to the loss recognition.

Income

16. Interest shall be accrued using the interest method using the redemption prices and redemption dates used for amortizing premiums and discounts. Interest income consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of loan-backed securities, and the addition of discount accrual. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

17. For reporting entities required to maintain an IMR, the accounting for realized capital gains and losses on sales of loan-backed securities shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an IMR, realized gains and losses on sales of loan-backed securities shall be recorded on the trade date, and shall be reported as net realized capital gains or losses in the Statement of Income.

18. A loan-backed security may provide for a prepayment penalty or acceleration fee in the event the investment is liquidated prior to its scheduled termination date. These fees shall be reported as investment income when received.

Origination Fees

19. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the loan-backed security consistent with paragraph 7 of this statement. Other origination fees shall be recorded as income upon receipt.
Origination, Acquisition, and Commitment Costs

20. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the loan-backed security, consistent with paragraph 6 of this statement. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase, or commitment to purchase loan-backed securities, shall be charged to expense when incurred.

Commitment Fees

21. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the loan-backed security is issued. If the loan-backed security is not issued then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

22. A fee paid to the reporting entity to obtain a commitment to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 7 of this statement over the life of the loan-backed security as an adjustment to the investment income on the loan-backed security. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Giantization/Megatization of FHLMC or FNMA Mortgage Backed Securities

23. Giantization/megatization of mortgage backed securities is defined as existing pools of FHLMC or FNMA mortgage-backed securities (MBS) with like coupon and prefix which are repooled together by the issuing agency creating a new larger security. The new Fannie Mae “Mega” or Freddie Mac “Giant” is a guaranteed MBS pass-through representing an undivided interest in the underlying pools of loans.

24. The benefits derived from giantization/megatization include:

a. Increased liquidity: Smaller MBS pools (particularly those with current face of less than $1 million) are less liquid than mortgage pools with current faces exceeding $5 million. Repooling smaller MBS pools into one, larger pool improves the marketability for the aggregate package;

b. Geographic diversity: Regrouping of multiple pools generally will create greater geographic pool loan diversity resulting in less prepayment variation due to regional economic factors;

c. Reduced administrative expenses: The reduced number of pools lowers bank custodial fees, pricing/factor service fees, and increases efficiency for the accounting and investment departments.

25. Repooled FHLMC and FNMA securities meet the definition of substantially the same as defined in SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements. The transaction shall not be considered a sale/purchase and no gain or loss shall be recognized. To properly document the repooling, the transaction shall be reported through Schedule D of the Annual Statement as a disposition and an acquisition.
26. Transaction fees charged by the issuing agencies shall be capitalized and amortized over the life of the repooled security.

Disclosures

27. In addition to the disclosures required for invested assets in general, the following disclosures regarding loan-backed securities shall be made in the financial statements:

a. Fair values in accordance with SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments (SSAP No. 27);

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. Basis at which the loan-backed securities are stated;

d. The adjustment methodology used for each type of security (prospective or retrospective);

e. Changes from the retrospective to the prospective adjustment methodology due to negative yield on specific securities;

f. If, for applying the retrospective method, the reporting entity has elected to use book value as of January 1, 1994 as the cost for securities purchased prior to January 1, 1994 where historical cash flows are not readily available;

g. Descriptions of sources used to determine prepayment assumptions; and

h. Market value sources - the following sources shall be applied consistently:

i. public market quotes;

ii. fair value provided by the broker;

iii. management estimate;

iv. pricing service;

v. pricing matrix.

28. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraphs 27 a. and 27 b. above shall be included in the annual audited statutory financial reports only.

Relevant Literature

29. This statement rejects FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities and FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases.

30. This statement also rejects FASB Emerging Issues Task Force No. 89-4, Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate, FASB Emerging Issues Task Force No. 90-2, Exchange of Interest-Only and

Effective Date and Transition

31. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

32. For securities purchased prior to January 1, 1994, where historical cash flows are not readily available for applying the retrospective method, the reporting entity may use January 1, 1994 as the acquisition date and the then book value as the cost for purposes of determining yield adjustments in future periods.

Capitalization of Interest

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for capitalization of interest.

SUMMARY CONCLUSION

2. The historical cost of acquiring an asset generally includes the necessary costs incurred to bring it to the condition and location necessary for its intended use. If an asset requires a period of time in which to carry out the activities necessary to bring it to that condition and location, the interest cost incurred during that period as a result of expenditures for the asset shall be included as a part of the historical cost of acquiring the asset.

3. Interest cost shall be capitalized for the following types of assets:
   a. Assets constructed or otherwise produced for an enterprise's own use (including assets constructed or produced for the enterprise by others for which deposits or progress payments have been made);
   b. Assets intended for sale or lease that are constructed or otherwise produced as discrete projects (e.g., real estate developments);
   c. Investments (equity, loans, and advances) accounted for by the equity method while the investee has activities in progress necessary to commence its planned principal operations provided that the investee's activities include the use of funds to acquire qualifying assets for its operations. The equity method is defined in SSAP No. 46—Investments in Subsidiaries, Controlled, and Affiliated Entities.

4. Interest cost shall not be capitalized for the following types of assets:
   a. Assets that are in use or ready for their intended use in the earning activities of the enterprise;
   b. Assets that are not being used in the earning activities of the enterprise and that are not undergoing the activities necessary to get them ready for use;
   c. Investments accounted for by the equity method after the planned principal operations of the investee begin;
   d. Investments in regulated investees that are capitalizing both the cost of debt and equity capital;
   e. Assets acquired with gifts and grants that are restricted by the donor or grantor to acquisition of those assets to the extent that funds are available from such gifts and grants. Interest earned from temporary investment of those funds that is similarly restricted shall be considered an addition to the gift or grant for this purpose;
   f. Nonadmitted assets.

5. Capitalized interest meets the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets and is an admitted asset to the extent it conforms to the requirements of this statement.
Capitalization

6. The amount of interest cost to be capitalized for qualifying assets shall be determined in accordance with paragraphs 12 through 16 of FASB Statement No. 34, Capitalization of Interest Cost (FAS 34) and paragraph 6 of FASB Statement No. 62, Capitalization of Interest Cost in Situations Involving Certain Tax-Exempt Borrowings and Certain Gifts and Grants (FAS 62).

7. The capitalization period shall be in accordance with paragraphs 17 through 19 of FAS 34 and paragraph 7 of FAS 62.

Disclosures

8. Disclosures shall be made in the financial statements in accordance with paragraph 21 of FAS 34.

9. Refer to the preamble for further discussion regarding disclosure requirements. The disclosure in paragraph 8 above shall be included in the annual audited statutory financial reports only.

Impairment

10. Capitalized interest shall be assessed for impairment in conjunction with the assessment of the related asset. Interest capitalization shall not cease when such an assessment requires recognition of a lower value for the asset than acquisition cost; rather the provision required to reduce acquisition cost to such lower value shall be increased appropriately.

Relevant Literature

11. The statutory principles established in this statement adopt the GAAP accounting principles for capitalization of interest cost set forth in FAS 34, FASB Statement No. 42, Determining Materiality for Capitalization of Interest Cost, FASB Statement No. 58, Capitalization of Interest Cost in Financial Statements That Include Investments Accounted for by the Equity Method, and FAS 62, except that nonadmitted assets are ineligible for capitalization of interest.

Effective Date and Transition

12. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

RELEVANT ISSUE PAPERS
Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for repurchase and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements.

SUMMARY CONCLUSION

2. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

Repurchase Agreements

3. Repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date within 12 months of the purchase. For securities to be substantially the same, the criteria defined in paragraph 13, must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

4. Repurchase agreements shall be accounted for as collateralized lendings. The underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

5. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the collateral is less than the recorded amount, the shortfall shall reduce the admitted asset value of the repurchase agreement.

Reverse Repurchase Agreements

6. Reverse repurchase agreements are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date within 12 months of the sale date. For securities to be substantially the same, the criteria defined in paragraph 13 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

7. Reverse repurchase agreements shall be accounted for as collateralized borrowings (financing transactions). The underlying securities shall continue to be accounted for as an investment by the reporting entity. The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement. Although recording these transactions gross tends to inflate assets and liabilities, it more closely reflects the financing nature of the transactions and their associated leverage impact to the financial statements.
Dollar Repurchase Agreements

8. Dollar repurchase and dollar reverse repurchase agreements are defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria defined in paragraph 13, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

9. For the seller in a dollar reverse repurchase agreement, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

10. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form consistent with paragraph 13.

11. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

12. For the purchaser in a dollar repurchase agreement, an asset is recorded for the amount of the purchase. Since the term of the agreement is limited to twelve months, it is accounted for as a short-term investment. Upon completion of the reverse repurchase agreement, cash is received in exchange for a “substantially the same” security. The difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Criteria to Meet Substantially the Same

13. For debt instruments, including mortgage-backed securities, to be substantially the same, all the following criteria must be met:

a. The debt instruments must have the same primary obligor, except for debt instruments guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and terms of the guarantee must be the same;

b. The debt instruments must be identical in form and type so as to give the same risks and rights to the holder;

c. The debt instruments must bear the identical contractual interest rate;
The debt instruments must have the same maturity except for mortgage-backed pass-through and pay-through securities for which the mortgages collateralizing the securities must have similar remaining weighted average maturities (WAMs) that result in approximately the same market yield;

Mortgage-backed pass-through and pay through securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages; and

The debt instruments must have the same aggregate unpaid principal amounts, except for mortgage-backed pass-through and pay-through securities, where the aggregate principal amounts of the mortgage-backed securities given up and the mortgage-backed securities reacquired must be within the accepted "good delivery" standard for the type of mortgage-backed security involved.

Separate Transactions

14. Agreements to repurchase and resell securities that do not meet the definitions in paragraph 3, 6, or 8 of this statement shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

15. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively.

16. Reporting entities shall offset such liabilities and assets only to the extent that one of the following occurs:
   a. A legal right of offset exists as defined in SSAP No. 64—Offsetting and Netting of Assets and Liabilities (SSAP No. 64), or
   b. The securities have the same settlement date, are executed with the same counterparty in accordance with a master netting arrangement, involve securities that exist in "book entry" form, and settle on securities transfer systems that have the same key elements and operating characteristics as the Fedwire Securities Transfer System.

Otherwise, separate assets and liabilities shall be recognized.

Disclosures

17. The following disclosures shall be made in the financial statements:
   a. If the reporting entity has entered into repurchase agreements, its policy for requiring collateral or other security;
   b. A description of the securities underlying the agreements, including book values and fair values, maturities, and weighted average interest rates for the following categories: (i) securities subject to reverse repurchase agreements, (ii) securities subject to repurchase agreements, (iii) securities subject to dollar repurchase agreements, and (iv) securities subject to dollar reverse repurchase agreements; and
c. A description of the terms of reverse repurchase agreements whose amounts are included in borrowed money.

18. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

19. This statement adopts AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used In Certain Audit Guides and a Statement of Position.

20. This statement adopts paragraphs 9 through 13, 15 through 17, 23 through 25, 27 through 30 and 66 through 71 of FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (FAS 125), as they relate to repurchase agreements, reverse repurchase agreements and dollar repurchase agreements.

21. This statement adopts FASB Emerging Issues Task Force No. 84-20, GNMA Dollar Rolls. This statement is consistent with FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts—an interpretation of APB Opinion No. 10 and FASB Statement No. 105 (FIN 39) (as it relates to reverse repurchase and repurchase agreements) and FASB Interpretation No. 41, Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements—an interpretation of APB Opinion No. 10 and a modification of FASB Interpretation No. 39 (FIN 41). FIN 39 and FIN 41 are adopted in SSAP No. 64.

22. This statement rejects paragraph 14 of FAS 125 as it relates to the classifications of securities under FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities (FAS 115). FAS 115 is rejected in SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities.

Effective Date and Transition

23. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Investments in Subsidiary, Controlled, and Affiliated Entities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investments in subsidiaries, controlled, and affiliated entities (hereafter referred to as SCA entities).

SUMMARY CONCLUSION

Definitions

2. Parent and subsidiary are defined as follows:
   a. Parent—An entity that directly or indirectly owns and controls the reporting entity;
   b. Subsidiary—An entity that is, directly or indirectly, owned and controlled by the reporting entity.

3. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies (SSAP No. 48). Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments.

4. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

5. The 10% ownership threshold shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. These presumptions can be overcome by predominant evidence to the contrary, however, they shall stand until overcome by such predominant contradictory evidence. FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18, provides guidance on determining when such evidence exists. A reporting entity with 10% or more of the voting interest shall evaluate all facts and circumstances relating to the investment and reach a judgment about whether the presumption of control is overcome. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting interest of an investee.

6. Investments in SCA entities meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.
Applying the Market Valuation, Statutory Equity and GAAP Equity Methods

7. The admitted investments in SCA entities shall be recorded using a market valuation approach (as described in paragraph 7 a.), or equity methods (as described in paragraph 7 b.).

a. In order to use the market valuation approach for SCA entities, the following requirements apply:

i. Once the reporting entity elects to use the market valuation approach for a particular subsidiary, the reporting entity cannot change the valuation method to another method (e.g., equity) without the approval of the domiciliary commissioner;

ii. The subsidiary must be traded on one of the following three major exchanges: (1) the New York Stock Exchange, (2) the American Stock Exchange, or (3) the NASDAQ National exchange;

iii. The reporting entity must submit subsidiary information to the Securities Valuation Office (SVO) for their calculation of the subsidiary’s market value. Such calculation could result in further discounts in market value above the established base discounts based on ownership percentages detailed below;

iv. Ownership percentages for determining the discount rate shall be measured at the holding company level;

v. If an investment in a SCA results in an ownership percentage between 10% and 50%, a base discount percentage between 0% and 20% on a sliding scale basis is required;

vi. If an investment in a SCA results in an ownership percentage greater than 50% up to and including 80%, a base discount percentage between 20% and 30% on a sliding scale basis is required;

vii. If an investment in a SCA results in an ownership percentage greater than 80% up to and including 85%, a minimum base discount percentage of 30% is required. Further, the SCA must have at least two million shares outstanding, with a total market value of at least $50 million in the public’s control; and

viii. Any ownership percentages exceeding 85% will result in the SCA being recorded on an equity method.

b. If a SCA investment does not meet the requirements for the market valuation approach in paragraph 7 a. or, if the requirements are met, but a reporting entity elects not to use that approach, investments in SCAs shall be recorded as follows:

i. Investments in insurance SCA entities shall be recorded based on the underlying statutory equity of the respective entity’s financial statements, adjusted for unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill (SSAP No. 68).

ii. Investments in noninsurance SCA entities that have no significant ongoing operations other than to hold assets that are primarily for the direct or indirect
benefit or use of the reporting entity or its affiliates, shall be recorded based on the underlying equity of the respective entity’s financial statements adjusted to a statutory basis of accounting and the resultant proportionate share of the subsidiary’s adjusted surplus, adjusted for unamortized goodwill as provided for in SSAP No. 68. Examples include but are not limited to: (i) an insurer and a SCA entity that leases autos, furniture, office equipment, or computer equipment to the insurer, (ii) an insurer and a SCA entity that owns real estate property that is leased to the insurer for office space, and (iii) an insurer and an SCA entity which holds investments which an insurer could acquire directly (i.e., “look through” investment subsidiary);

iii. Investments in noninsurance SCA entities that have significant ongoing operations beyond the holding of assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates shall be recorded based on the audited GAAP equity of the investee. Examples include but are not limited to: (i) a property-casualty or life insurer and a SCA entity that is an oil and gas venture, and (ii) a property-casualty insurer or life insurer and a SCA manufacturer.

8. This statement requires that investments for noninsurance SCA entities that have no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates, and that do not qualify for the market valuation approach outlined in paragraph 7 a. or for which the reporting entity does not elect that approach, shall be recorded based on their underlying equity adjusted to a statutory basis of accounting. In applying the provisions of this statement to noninsurance SCA entities, the focus is on the primary operations of the SCA for purposes of determining if it is required to be accounted for under subparagraph 7 b. ii. Entities whose primary operations do not provide services to the insurance industry fall under provisions of subparagraph 7 b. iii. It is not the intent of subparagraph 7 b. ii. to apply to an affiliate which has insignificant transactions within the insurance industry. This rule requires judgment by the reporting entity in making the determination and provides flexibility to the regulator in analyzing the determination.

9. For investments in entities recorded based on the underlying audited GAAP equity of the investee the amount to be recorded shall be defined as the initial investment in an investee at cost (as defined in SSAP No. 68). The carrying amount of the investment shall be adjusted to recognize the reporting entity’s share of the audited GAAP basis earnings or losses of the investee after the date of acquisition, adjusted for any dividends received. A reporting entity’s share of adjustments that are recorded directly to the investee’s stockholder’s equity under GAAP shall also be recorded as adjustments to the carrying value of the investment with an offsetting amount recorded directly to unrealized capital gains and losses on investments.

10. The statutory equity method as described in subparagraph 7 b. i. shall be applied by recording an initial investment in an investee at cost, which is defined in SSAP No. 68 as the sum of (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition. After the date of acquisition, the initial investment amount shall be adjusted for the amortization of goodwill, the reporting entity’s share of statutory basis earnings or losses, and other changes in surplus (including changes in nonadmitted assets) of the investee. This represents the carrying amount of the investment.

11. To apply the equity method of accounting to investees as described in subparagraph 7 b. ii., certain adjustments shall be made to GAAP (or other basis) income to determine the reporting entity’s share of the investee’s statutory earnings and losses and other changes in surplus. Further guidance on
recording the initial investment (including goodwill and negative goodwill) and other aspects of applying the equity method are discussed in paragraph 13.

12. If the reporting entity is using an equity method, the reporting entity’s share of undistributed earnings and losses of the investee shall be included in unrealized gains and losses of the reporting entity. The reporting entity’s share of other changes in the investee’s surplus (e.g., the change in the investee’s nonadmitted assets) shall be recorded by the investor as a component of unrealized capital gains and losses on investments. If the reporting entity uses the market valuation approach outlined in paragraph 7 a., changes in that valuation shall be included in unrealized gains and losses. Dividends or distributions received from an investee shall be recognized in investment income when declared to the extent that they are not in excess of the undistributed accumulated earnings attributable to the investee. Dividends or distributions declared in excess of the undistributed accumulated earnings attributable to the investee shall reduce the carrying amount of the investment.

13. The procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 7 b. i. through 7 b. iii.), as applicable, to investments in SCA entities:

a. A difference between the cost of an investment and the underlying equity in the statutory book value (GAAP book value if a noninsurance SCA entity that has significant ongoing operations beyond the holding of assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates) of the acquired company at the date of acquisition shall be accounted for in accordance with SSAP No. 68;

b. A transaction of an investee of a capital nature that affects the reporting entity’s share of stockholders’ equity of the investee shall be reflected as an unrealized gain or loss (e.g., where the investee issues additional stock or a new class of stock that impacts the reporting entity’s equity ownership in the investee, the reporting entity’s recorded investment shall be adjusted to reflect the transaction);

c. Realized gains or losses on the sale of an investment in a SCA entity shall be recorded in an amount equal to the difference at the time of sale between the selling price and carrying amount of the investment plus any previously recorded unrealized gain or loss;

d. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an equity method to the investee’s current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the most recent available financial statements. A lag in reporting shall be consistent from period to period;

e. A reporting entity’s share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero and shall not provide for additional losses unless the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee (guaranteed obligations meeting the definition of liabilities in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets shall be recorded as liabilities). If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;
f. When an investee has outstanding cumulative preferred stock, the reporting entity shall compute its share of earnings (losses) after deducting the investee's preferred dividends, whether or not such dividends are declared;

An investment in a SCA entity may fall below the level of ownership described in paragraph 4 from the sale of a portion of an investment by the reporting entity, the sale of additional interests by an investee, or other transactions. The reporting entity shall discontinue accruing its share of the earnings or losses of the investee for an investment that no longer qualifies for an equity method. The earnings or losses that relate to the investment interests retained by the reporting entity and that were previously accrued shall remain as a part of the carrying amount of the investment. The investment account shall not be adjusted retroactively under the conditions described in this subparagraph. However, dividends received by the investor in subsequent periods which exceed the reporting entity's share of earnings for such periods shall be applied as a reduction of the carrying amount of the investment;

An investment in a SCA entity that was previously accounted for under one method may become qualified for use of another method (as prescribed in paragraph 7) because of a change in the level of ownership (i.e., acquisition of additional interests by the reporting entity, acquisition or retirement of interests by the investee, or other transactions, or a change in facts or circumstances (e.g., paragraphs 7 a. i., 7 a. viii.)). When an investment qualifies for use of another method of accounting, the reporting entity shall adopt the new method of accounting and the investment shall be adjusted to reflect the reporting entity's equity interest in the SCA entity under the new method. A corresponding amount shall be recorded as an unrealized gain or loss.

A reporting entity that owns an interest in itself via direct ownership of shares of an upstream intermediate or ultimate parent shall reduce the value of such shares for the reciprocal ownership. If the shares of the parent are owned indirectly by a reporting entity, via a down-stream SCA entity, the directly held entity, which owns the parent's shares, shall have its value reduced for the reciprocal ownership.

Any parent reporting entity that owns an interest in itself via either direct or indirect ownership of a down-stream affiliate, which in turn owns shares of the parent reporting entity, shall eliminate its proportionate interest in these shares from the valuation of such affiliate.

Impairment

When there is a decline in the fair value of an asset owned by a SCA entity that is other than temporary, the SCA entity shall write the asset down to fair value.

For any decline in the fair value of an investment in a SCA entity that is other than temporary, the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value which are determined to be other than temporary, shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based
on the statutory equity method or the existence of investee operating losses may indicate a loss in value, however, they are not necessarily indicative of a loss in value that is other than temporary.

Consolidation

18. Majority-owned subsidiaries shall not be consolidated for individual entity statutory reporting. This does not exempt certain reporting entities who are members of an affiliated group from the requirement to issue consolidated or combined annual statements as supplemental information in accordance with NAIC guidelines.

Disclosures

19. The significance of an investment to the reporting entity’s financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. The following disclosures shall be made for all investments in SCA entities that exceed 10% of the total admitted assets of the reporting entity:

a. Financial statements of a reporting entity shall disclose (i) the name of each SCA entity and percentage of ownership of common stock, (ii) the accounting policies of the reporting entity with respect to investments in SCA entities, and (iii) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., goodwill, other nonadmitted assets, market value or discounted market value adjustments) and the accounting treatment of the difference;

b. For those SCA entities for which a quoted market price is available, the aggregate value of each SCA investment based on the quoted market price and the difference, if any, between the amount at which the investment is carried and the quoted market price shall be disclosed;

c. Summarized information as to assets, liabilities, and results of operations shall be presented for SCA entities, either individually or in groups; and

d. Conversion of outstanding convertible securities, exercise of outstanding options and warrants and other contingent issuances of an investee may have a significant effect on an investor’s share of reported earnings or losses. Accordingly, material effects of possible conversions, exercises or contingent issuances shall be disclosed in notes to the financial statements of the reporting entity.

20. Any commitment or contingent commitment to a SCA entity shall be disclosed (e.g., guarantees or commitments to provide additional capital contributions).

21. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment writedown:

a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

b. The amount of the impairment and how fair value was determined.

22. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 19 d. above shall be included in the annual audited statutory financial reports only.
Relevant Literature

23. This statement adopts the NAIC Purposes and Procedures of the Securities Valuation Office.

24. This statement adopts FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18 as guidance to be considered in determining the existence of control.

25. This statement rejects APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock, AICPA Accounting Interpretations, The Equity Method of Accounting for Investments in Common Stock: Accounting Interpretations of APB Opinion No. 18, FASB Technical Bulletin No. 79-19, Investor's Accounting for Unrealized Losses on Marketable Securities Owned by an Equity Method Investee, FASB Emerging Issues Task Force No. 87-21, Change of Accounting Basis in Master Limited Partnership Transactions, and FASB Emerging Issues Task Force No. 96-16, Investor's Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights.

Effective Date and Transition

26. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Correction of Errors.

Uninsured Plans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for all uninsured plans.

SUMMARY CONCLUSION

2. For purposes of this statement, uninsured accident and health plans, including HMO administered plans, and uninsured property and casualty plans (collectively referred to as uninsured plans) are defined as plans for which a reporting entity, as an administrator, performs administrative services such as claims processing for a third party that is at risk, and accordingly, the administrator has not issued an insurance policy, regardless of whether an identification card is issued. In the case of uninsured accident and health plans, the administrator may arrange for the provision of medical services through a contracted or employed provider network. The plan (whether insured by another reporting entity or self insured) bears all of the insurance risk, and there is no possibility of loss or liability to the administrator caused by claims incurred related to the plan. The administrator, however, may be subject to credit risk with regard to the risk bearing entity. An uninsured accident and health plan may be either an Administrative Services Only (ASO) plan or an Administrative Services Contract (ASC) plan. Under an ASO plan, claims are paid from a bank account owned and funded directly by the uninsured plan sponsor; or, claims are paid from a bank account owned by the reporting entity, but only after the reporting entity has received funds from the uninsured plan sponsor that are adequate to fully cover the claim payments. Under an ASC plan, the reporting entity pays claims from its own bank accounts, and only subsequently receives reimbursement from the uninsured plan sponsor. No arrangement where the reporting entity receives a capitated payment for providing medical services to a third party shall qualify as an insured plan.

3. Uninsured accident and health plans also include Federal, state or other government department funded programs such as Medicare cost contracts where there is no underwriting risk to the reporting entity. Under Medicare cost contracts, service provided to recipients includes the direct delivery of health care for which the reporting entity is reimbursed based on costs incurred as provided for in regulations governing the administration of such contracts. Other such programs may include some Medicaid and Champus contracts for which administration or other non-underwriting services are provided.

4. Partially insured or combination plans exist, under which the reporting entity issues an insurance policy for some of the risks related to the claims (e.g. minimum premium and stop loss coverage), but acts as an administrator for some, or all, of the claims paid by the plan. Such plans shall be treated as two plans: an insured plan (the part for which the reporting entity has issued a policy) and an uninsured plan (the part that meets the definition in paragraph 2 of this statement). The components related to uninsured plans shall be accounted for using the accounting principles established in this statement; the components related to insured plans shall be accounted for as insurance.

Revenue/Expense Recognition

5. The administrator’s statement of operations shall exclude all income and expenses related to claims, losses, premiums, and other amounts received or paid on behalf of uninsured ASO or uninsured ASC plans. An administrator acting as a provider of services, that provides such services through a salaried network, where the cost allocation of the service provided to insured vs. uninsured plans cannot be reasonably determined, shall report medical and hospital expenses on a gross basis by type of expense and report revenue from uninsured plans on a gross basis as fee for service income.
6. Commissions, expenses, and taxes paid by the administrator to administer such plans shall be reported on a gross basis by type of expense. Where the only functions provided are administrative, administrative fees and related reimbursements from the plan shall be deducted from general expenses. Where the reporting entity provides both administration and health care services directly, income from Medicare or similarly structured cost based reimbursement contracts is not recorded as premium but is recorded as revenue in the appropriate category. Health care services rendered as “medical and hospital” categorized by type and administrative expenses by type of expense shall be reported on an incurred basis.

7. Income from cost based reimbursement contracts is recorded as revenue because the service provided is for the direct delivery of care to recipients. There are risks associated with these plans in that all costs incurred under the contract may not be reimbursable and revenues may be adjusted based on subsequent challenges of costs included in filed cost reports. In addition, revenue may also be adjusted based on the performance under the terms of the contract or other external factors.

Amounts Receivable

8. Amounts receivable from uninsured plans for (a) claims and other costs paid by the administrator on behalf of the third party at risk and (b) fees related to services provided by the administrator to the plan meet the definition of assets as set forth in SSAP No. 4—Assets and Nonadmitted Assets. A receivable shall not be recorded for unpaid claims. A receivable related to Medicare or a similarly structured cost based reimbursement contract shall only be recorded when services have been rendered.

9. An evaluation shall be made of the amounts receivable to determine any nonadmitted amounts. Next, an evaluation shall be made in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5), to determine whether there is an impairment. This two step process is set forth below:

   a. Uncollected uninsured plan receivables (excluding Medicare and similar government plans) over ninety days due shall be accounted for as a nonadmitted asset;

   b. Remaining amounts determined to be uncollectible shall be written off. If in accordance with SSAP No. 5, it is probable the amount receivable is uncollectible, any uncollectible amount receivable shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible and is therefore not written off, disclosure requirements outlined in SSAP No. 5 shall be followed. This evaluation may consider irrevocable letters of credit to which the administrator is beneficiary, amounts on deposit with the administrator or other unrestricted funds available to the administrator.

10. The following shall provide additional guidance in determining the nonadmitted portion of amounts receivable from uninsured plans:

   a. Amounts classified as nonadmitted assets collected subsequent to the date of the statutory financial statements shall not be used to decrease the nonadmitted asset otherwise calculated;

   b. The due date is governed by the contractual billing date of the uninsured plan;

   c. Medicare and similar government funded plans—Amounts due related to Medicare and similar government plans shall not be nonadmitted when they become over ninety days due. Appropriate reserves shall be established to cover costs incurred which may not be
reimbursed upon final determination by the governing agencies under the cost contract or for adjustments to revenues based on performance under the terms of the contract or other external factors.

Liabilities

11. A liability shall be established for funds held by an administrator in its general assets for the benefit of an uninsured plan or for funds which may be owed by the administrator in connection with the administration of an uninsured plan. A liability relating to one plan shall not be offset by an asset relating to a different plan. Administrators shall not record aggregate reserves, claim/loss reserves, or liabilities (except for Medicare or similarly structured cost based reimbursement contracts) for any other claim costs paid by the administrator on behalf of uninsured plans.

Disclosures

12. The statutory financial statements shall provide the following:

a. Information with regard to the profitability to the administrator of all ASO plans and the uninsured portions of partially insured plans for which the reporting entity serves as an ASO administrator;

For the total and each category separately provided: (i) net reimbursement for administrative expenses (including administrative fees) in excess of actual expenses, (ii) total net other income or expense (including interest paid to or received from plans), and (iii) total net gain or loss from operations and (iv) the claim payment volume;

b. Information with regard to the profitability to the administrator of all ASC plans and the uninsured portions of partially insured plans for which the reporting entity serves as an ASC administrator;

For the total and each category separately provided: (i) gross reimbursement for medical cost incurred, (ii) gross administrative fees accrued, (iii) other income or expense (including interest paid to or received from plans), (iv) gross expenses incurred (claims and administrative), and (v) total net gain or loss from operations.

c. Information with regards to Medicare or similarly structured cost based reimbursement contracts shall include: (i) major components of revenue by payor, (ii) receivables from payors with account balances the greater of 10% of gross Health Care Receivables or $10,000, (iii) recorded allowances and reserves for adjustment of recorded revenues, (iv) adjustments to revenue resulting from audit of receivables related to revenues recorded in the prior period.

13. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

14. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Joint Ventures, Partnerships and Limited Liability Companies

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investments in joint ventures, partnerships, and limited liability companies.

SUMMARY CONCLUSION

2. This statement addresses accounting for investments in any joint venture, partnership, or limited liability company whether or not it is considered to be controlled by or affiliated with the reporting entity.

3. Investments in joint ventures shall include investments in corporate joint ventures, and unincorporated joint ventures (also referred to as undivided interests in ventures). A corporate joint venture is defined as a corporation owned and operated by a small group (the joint venturers) as a separate and specific business or project for the mutual benefit of the members of the group. A corporate joint venture usually provides an arrangement under which each joint venturer may participate, directly or indirectly, in the overall management of the joint venture. Joint venturers thus have an interest or relationship other than as passive investors. An unincorporated joint venture is similar in its purpose but is not incorporated.

4. Investments in partnerships shall include investments in general partnership interests, and limited partnership interests. A general partnership is defined as an association in which each partner has unlimited liability. Each partner assumes joint and several liability for all partnership debts. A limited partnership shall be defined as a partnership having two classes of partners: (a) general partners who manage the partnership, subject to the partnership agreement, and have personal liability for the general obligations of the partnership and (b) limited partners who are passive investors and have no personal liability beyond their investment.

5. A limited liability company is defined as a business organization which is a hybrid of a corporation and partnership whereby the owners have limited liability like a corporation and profits may pass through to the owners for tax purposes like a partnership if certain criteria are met. The owner's personal liability is limited to his own acts and the owners can fully participate in the management of the business with no adverse impact on their limited liability.

6. Investments in the ventures defined in paragraphs 3 through 5 meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement. Investments in joint ventures, partnerships, and limited liability companies shall be reported in Other Invested Assets in the financial statements.

7. Investments in these ventures, except for limited partnerships with a minor ownership interest, shall be reported using an equity method as defined in SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities (SSAP No. 46), paragraphs 7 b. i. through 7 b. iii.

8. Limited partnerships in which the entity has a minor ownership interest (i.e., less than 10%) shall be recorded based on the underlying audited GAAP equity of the investee. The amount to be recorded shall be defined as the initial investment in an investee at cost (as defined in paragraph 3 of SSAP No. 68-Business Combinations and Goodwill). The carrying amount of the investment shall be adjusted to recognize the reporting entity's share of the audited GAAP basis earnings or losses of the investee after the date of acquisition, adjusted for any distributions received. A reporting entity's share of adjustments that are recorded directly to the investee's stockholder's equity under GAAP shall also be recorded as adjustments to the carrying value of the investment with an offsetting amount recorded to unrealized capital gains and losses on investments.
9. The reporting entity’s share of undistributed earnings and losses of the investee shall be included in unrealized gains and losses of the reporting entity. The reporting entity’s share of other changes in the investee’s surplus (e.g., the change in the investee’s nonadmitted assets) shall be recorded by the investor as a component of unrealized capital gains and losses on investments. Distributions received from an investee shall be recognized in investment income when declared to the extent that they are not in excess of the undistributed accumulated earnings attributable to the investee. Distributions declared in excess of the undistributed accumulated earnings attributable to the investee shall reduce the carrying amount of the investment.

Impairment

10. For any decline in the fair value of an investment in a joint venture, partnership, or limited liability company which is determined to be other than temporary, the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary, shall be recorded as realized losses.

11. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. Even if the fair value of an investment is below the carrying amount it is not necessarily indicative of a loss in value that is other than temporary. Similarly, the existence of investee operating losses may indicate a loss in value; however, it is not necessarily indicative of a loss in value that is other than temporary.

Disclosures

12. The significance of an investment to the reporting entity’s financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. Disclosures as follows shall be made for all investments in joint ventures, partnerships, or limited liability companies that exceed 10% of the total admitted assets of the reporting entity:

   a. (1) the name of each joint venture, partnership or limited liability company and percentage of ownership, (2) the accounting policies of the reporting entity with respect to investments in joint ventures, partnerships and limited liability companies and (3) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., nonadmitted goodwill or other nonadmitted assets) and the accounting treatment of the difference;

   b. For joint ventures, partnerships, and limited liability companies for which a quoted market price is available, the aggregate value of each joint venture, partnership, or limited liability company investment based on the quoted market price; and

   c. Summarized information as to assets, liabilities, and results of operations for joint ventures, partnerships, and limited liability companies either individually or in groups.

13. Any commitment or contingent commitment (e.g., guarantees or commitments to provide additional capital contributions) to a joint venture, partnership, or limited liability company shall be disclosed.

14. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:
a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

b. The amount of the impairment and how fair value was determined.

15. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

16. This statement is inconsistent with the guidance in paragraph 17 of APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock (APB 18), which addresses when control exists. APB 18 is addressed in its entirety and rejected in SSAP No. 46. This statement also rejects AICPA Statement of Position 78-9, Accounting for Investments in Real Estate Ventures.

Effective Date and Transition

17. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Policy Loans

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for policy loans.

SUMMARY CONCLUSION

2. A policy (or contract) loan shall be defined as a loan to a policyholder, under the provisions of an insurance contract, that is secured by the cash surrender value or collateral assignment of the related policy or contract. Policy loans shall include:
   a. Cash loans, including loans resulting from early payment benefits or accelerated payment benefits, on contracts when the terms of the contract specify that such payments are policy loans secured by the policy;
   b. Automatic premium loans, which are loans made in accordance with policy provisions whereby delinquent premium payments are automatically paid from the cash value at the end of the established grace period for premium payments.

3. Policy loans meet the definition of assets, as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets, except as specified in paragraphs 5 and 6 of this statement. Policy loans are readily available to satisfy policyholder obligations as the terms of the policy loan allow the reporting entity to offset an outstanding policy loan balance against the cash surrender value of the policy.

4. Policy loans shall be carried at the unpaid balance of the loan. The unpaid balance of the loan shall include any unpaid principal plus any accrued interest which is 90 days or more past due.

5. If the unpaid balance of the loan exceeds the cash surrender value or policy reserves established for the policy, the policy generally lapses. Cash surrender value shall be defined as the cash value of the basic policy plus cash value of any policy accumulations such as paid-up additions. The excess of the unpaid balance of the loan over the cash surrender value shall be evaluated for collectibility. If the amount is considered uncollectible, it shall be written off as a reduction of investment income in the statement of operations during the period it is determined to be uncollectible. Except for collateral assignment loans, all other amounts in excess of the cash surrender value shall be considered nonadmitted assets. The change in this nonadmitted asset shall be recorded as an unrealized capital gain or loss as applicable.

6. A loan resulting from early payment benefits or accelerated payment benefits and secured by an assignment of the policy to the reporting entity as collateral for the loan shall be an admitted asset, except that the amount of any loan (including accrued interest) in excess of the policy reserve for that policy shall be nonadmitted. Upon death, the entire death benefit is recorded as a death benefit expense. The policy proceeds shall be used to repay the loan. Any proceeds in excess of that needed to repay the loan are payable to the named beneficiary.

7. Interest income on policy loans shall be recorded as earned and included in investment income consistent with SSAP No. 34—Investment Income Due and Accrued. For interest received before it is earned, unearned interest income shall be recorded as a liability in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets.
8. Accrued interest income on policy loans that is past due 90 days or more shall be reclassified from Investment Income Due and Accrued and included in the unpaid balance of the policy loan as defined in paragraph 4.

Effective Date and Transition

9. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

Classifications and Definitions of Insurance or Managed Care Contracts In Force

SCOPE OF STATEMENT

1. This statement provides a general framework for classifying insurance or managed care contracts into categories where the recognition of contract and policy reserves and related revenue, benefits, and claims is fundamentally different. Separate statements will establish the accounting principles for premium and income recognition and policy benefit and claim reserves for all contracts defined herein.

SUMMARY CONCLUSION

Overview

2. The primary purpose of insurance, including managed care coverage, is to provide economic protection from identified risks occurring or discovered within a specified period. These risks include death, disability, health benefits, outliving one's financial assets, and damage to property by an insured peril or damage or injury to the insured or third parties. The accounting for the contract is significantly influenced by the terms of the insurance or managed care contract.

3. In order to provide for a conservative, consistent, and comparable method of accounting for insurance or managed care contracts, premiums and related benefits shall be recognized considering the policy term, premium payment requirements, risks assumed and benefits provided under the contract using conservative assumptions as to interest, mortality, morbidity, and incurred costs for health benefits as applicable. The reserve and income recognition methods reflect the premium payment pattern and the insurance protection and/or benefits provided for in the insurance or managed care contract.

4. This statement establishes an overall framework for existing insurance or managed care contracts by identifying four broad categories of insurance or managed care contracts where the premium payment pattern and the protection and/or benefits provided are fundamentally different and therefore require different income recognition and reserving methods.

5. Insurance contracts providing any protection against death, disability, accident or illness in which the reporting entity assumes mortality or morbidity risk shall be classified as life or accident and health contracts, as applicable. Managed care contracts provide defined health care services to subscribers, members or policyholders, collectively referred to hereafter as subscribers, in return for fixed, periodic premiums (usually paid monthly) that are generally due at or before the beginning of the coverage period and shall be classified as health contracts. Contracts which insure against damage to property by an insured peril or damage or injury to the insured or third parties, generally over a fixed/limited period of time, shall be classified as property and casualty contracts. Contracts in which the reporting entity does not assume any mortality, morbidity, health benefit costs incurred, or casualty risk and which act exclusively as investment vehicles shall be classified as deposit-type contracts. Such classification shall be made at the inception of the contract and shall not change.

Life Contracts

6. The primary purpose of life insurance is to provide financial assistance to a beneficiary at the insured's death. The long period of coverage involving the risk of death, a risk which usually increases with age, is the distinguishing characteristic by which life insurance is set apart from other forms of insurance. Life insurance is often sold on a level premium basis under which the annual premium remains constant even though the expected policy benefits and services do not occur evenly over the duration of the contract. Premium revenue generally exceeds expected policy benefits in the early years.
of the contract and it is necessary to accrue, as premium revenue is recognized, a liability for costs that
are expected to be paid in the later years of the contract.

7. The liability for expected costs relating to most types of life contracts is accrued over the current
and expected renewal periods of the contracts. The net valuation premium is based upon an assumed
interest rate and upon the frequency of death derived from mortality tables. The net premiums collected,
after deducting benefits and other costs each year, are accumulated at interest. This accumulation, when
combined with future net premiums and future investment income theoretically generate a sum sufficient
to pay the claims resulting from the death or disabilities of the insured.

8. The liability which corresponds to this fund is referred to as the policy reserve. These contracts
are generally expected to be in force for an extended period of time and require the performance of
various functions and services for an undefined period of time and are generally not subject to unilateral
changes in their provisions. The policy reserve is generally calculated as the excess of the present value
of future benefits to be paid to or on behalf of policyholders less the present value of future net
premiums, discounted at valuation interest and mortality.

9. Life insurance contracts shall include contracts with life contingencies, including, but not limited to:
   - Whole life contracts
   - Endowment contracts
   - Term life contracts
   - Supplementary contracts
   - Group life contracts
   - Franchise life contracts
   - Universal life type contracts
   - Variable life contracts
   - Limited payment contracts
   - Credit life contracts
   - Annuity contracts

Life Contracts—Definitions

10. The contract for ordinary life insurance is between the company and the policy owner (often the
insured). Many variations of ordinary life coverages are available to a purchaser of insurance, including
participating, limited-payment periods, combinations of coverages, and decreasing (or increasing) death
benefits. Industrial life insurance, also called “debit” insurance, is insurance under which premiums are
paid monthly or more often, the face amount of the policy does not exceed a stated amount, and the
words “industrial policy” are printed in prominent type on the face of the policy. Ordinary and industrial
life insurance contracts are considered life contracts and include the types of coverage as described in the
following paragraphs.
11. Whole life contracts provide a fixed amount of insurance coverage over the life of the insured and the related benefits are normally payable only upon the insured's death. Premiums are paid over various periods as allowed by the terms of the policy contract. Whole life insurance contracts provide for nonforfeiture values, some common types being reduced paid up insurance, extended term insurance, and cash values, and some provide for the payment of policy dividends. A level premium is usually paid for policies of this type, and the premium may be paid in annual or more frequent modes. An ordinary life (straight-life) policy stipulates that premiums are to be paid during the life of the insured.

12. Endowment contracts are principally savings contracts which incorporate an element of life insurance protection. Endowment insurance contracts provide a benefit if the insured survives the endowment period or the amount is paid to a beneficiary if the insured does not survive. A pure endowment contract only provides a benefit to the insured if he/she survives the endowment period. Endowment policies mature at a specified attained age of the insured or at the end of a specified period. Premium payments for endowment contracts are made over a specified period, but may also be made under a single premium or limited-payment plan. Both whole life and endowment policies contain nonforfeiture or similar clauses which provide for a value in cash or some other form of insurance to be available in the event of failure to continue the required premiums.

13. Term life contracts provide insurance over a specified period of time. If the insured dies during this term, the face amount of the policy will be paid to the beneficiary. Policies for term insurance which are written for relatively short periods of time commonly grant the policyholder the right to renew for an additional period or periods up to a maximum age, such as 60 or 65, without requiring additional evidence of insurability. Rights to convert to whole life or endowment contracts may also be included in the contract. Term contracts may also be made for a period which will end when the insured reaches a certain age (for example, age 60 or 65). Such policies do not usually provide nonforfeiture values.

14. Supplementary contracts with life contingencies are a type of agreement between the insurance company and either the insured or the beneficiary, usually to provide for full or partial settlement of the amount payable upon the termination of an original contract. Generally, the proceeds are paid over the lifetime of one or more beneficiaries. This differs from a supplementary contract without life contingencies under which the proceeds are paid over a definite period without regard to the life of the beneficiary.

15. Group life contracts are insurance on the lives of a group of persons under a single master contract. Insurance of this type is customarily written on a yearly renewable term basis although some permanent group life is sold. Group life insurance is based on a master policy which usually precludes or disallows individual selection and is for the benefit of persons other than the policyholder. The individual insured members may receive certificates of insurance which evidence the contract. The contract is made by the policyholder and the insurer; there is no contract of insurance between the policyholder and the members. State statutes vary as to what constitutes a group and as to who may be a policyholder. Some states permit only employee-employer relationships in a group contract. Others permit union members, credit union members, or similar relationships in group contracts.

16. Franchise life contracts usually consist of individual policies offered to all persons in a general class (usually a work profession) who are related in some way such as belonging to a certain association.

17. Universal life and variable life contracts include those contracts which have terms that are not fixed and guaranteed relative to premium amounts, expense assessments, or benefits accruing to the policyholder. These contracts generally provide for death benefits and nonforfeiture values and may be issued on a fixed premium basis or on a flexible premium basis where the premiums are paid at the insured's discretion.
18. Limited-payment contracts are contracts with terms that are fixed and guaranteed, and for which premiums are paid over a specified number of years or to a specified age. The insurance coverage continues for the remainder of the insured's life. A single-premium policy requires a lump-sum payment at the inception of the policy.

19. Credit life contracts are sold in connection with loans or other credit transactions not exceeding a stated duration and provide insurance protection against death. This form of insurance is generally issued in connection with the issuance of credit to an individual by a bank, retailer, finance company, or other similar organizations. This type of insurance most often protects the creditor to the extent of the unpaid balance of the loan in the form of decreasing term insurance; however, some credit life insurance is sold on a level-term basis.

20. An annuity contract is an arrangement whereby an annuitant is guaranteed to receive a series of stipulated amounts commencing either immediately or at some future date. A contract with a purchase rate guarantee represents a life contingency that would require an annuity contract to be classified as a life contract. Annuity contracts are issued to individuals or to groups. Group annuities are often the vehicle used to provide for an entity's pension obligations to its employees. The main types of annuity contracts with life contingencies are discussed below.

a. A deferred annuity provides for the accumulation of funds to be applied at some future period designated by the policyholder. Premium payments can be made in a lump sum amount (single premium deferred annuity), or periodically (flexible or fixed premium deferred annuity) as allowed by the policy contract. At the end of the accumulation period, the policyholder may elect to receive a lump sum distribution or may elect to receive periodic payments for life, or over a specific period, or some combination thereof;

b. A variable annuity is an annuity which includes a provision for benefit payments which vary in accordance with the rate of return of the underlying investment portfolio selected by the policyholder. The considerations for a variable annuity are usually invested in a separate account in which the value of the contract share varies according to the performance of the separate account before the commencement of annuity payments as well as after. Premium payments can be made in lump sum amounts, or periodically as allowed by the policy contract. A minimum death benefit is often guaranteed during the annuity consideration accumulation period and these contracts are therefore classified as life contracts;

c. A straight-life annuity provides for periodic payments to the annuitant as long as the annuitant lives. Death of the annuitant constitutes completion of the contract and no further payments are made by the insurance company;

d. A life annuity with a period certain works essentially the same way as the straight-life annuity as the annuitant receives periodic payments for as long as the annuitant lives. However, if the annuitant dies before the end of the specified “certain” period, payments are continued to a beneficiary until the specified number of “certain” payments (i.e., the specified period in the contract) is completed;

e. A refund annuity is similar to the life annuity with a period certain in which the annuitant receives periodic payments for as long as the annuitant lives. There are two variants of this type of annuity. Under the cash refund annuity, a lump-sum payment is made at the death of the annuitant equal to the excess, if any, of the purchase price of the
annuity over the sum of the annuity payments made to date of death. The installment refund annuity provides that annuity payments are to continue to a beneficiary after the death of the annuitant until the sum of all payments made equals the purchase price;

f. A joint and survivorship annuity provides for the continuation of payments after the death of one of the annuitants during the lifetime of the surviving annuitant.

**Accident and Health Contracts**

21. Health insurance policies or managed care contracts, offered by a health maintenance or similar organization, many life insurance and some property and casualty companies, may provide hospital, surgical, medical, loss of income, accidental death and dismemberment, or long term care coverage as well as other health related benefits. The insurance protection involving economic loss resulting from a medical condition (e.g., medical care expenses or the risk of disability) is the distinguishing characteristic by which accident and health insurance or managed care contracts are set apart from other forms of insurance. Health coverage is currently furnished under group or individual contracts. Coverage sold to individuals can be subdivided according to the reporting entity’s right to continue the policy, limitations on the reporting entity’s right to increase premiums, as well as other factors.

22. Accident and health contracts also include risk contracts with Medicaid and Medicare whereby the reporting entity assumes insurance risk.

23. Managed care contracts are contracts that provide defined health care services to subscribers in return for fixed, periodic premiums (usually paid monthly) that are generally due at or before the beginning of the coverage period. Managed care means a system or technique(s) generally used by reporting entities to affect access to and control payment for health care services. Managed care techniques most often include one or more of the following: 1) review of the medical necessity and appropriateness of services or site of services; 2) contracts with selected providers; 3) financial incentives for enrollees to use specific providers, services, or service sites; 4) controlled access to and coordination of services by a case manager; and 5) payor efforts to identify treatment alternatives and modify benefit restrictions for high cost patient care. Expenses for medical, hospital, pharmacy and other benefits are recognized based on the way the reporting entity provides for the contracted services. In some instances, this is through the payment of claims to providers as services are rendered which require a claims liability to be recorded as addressed in SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses (SSAP No. 55) or through capitated arrangements based on contracts with providers, where expense is recognized ratably over the contract period in accordance with SSAP No. 55.

24. Similar to life insurance contracts, a significant amount of accident and health contracts is sold to individuals and groups on a level premium basis under which the annual premium remains constant even though the expected policy benefits and services may not occur evenly over the duration of the contract. Premium revenue for level premium contracts generally exceeds expected policy benefits in the early years of the contracts and it is necessary to accrue, as premium revenue is recognized, a liability for costs that are expected to be paid in the later years of the contracts.

25. The liability for expected costs relating to accident and health contracts sold on a level premium basis is accrued over the current and expected renewal periods of the contracts. The net valuation premium is based upon an assumed interest rate, persistency, and the frequency of expected death and disability claims, generally derived from mortality and morbidity tables. The net premiums collected, after deducting benefits and other costs each year, are accumulated with interest. Similar to life insurance, this accumulation or policy reserve, when combined with future net premiums and future investment income theoretically generate a sum sufficient to pay the claims resulting from the death or
disabilities of the insured or subscriber. The reserve is generally calculated as the excess of the present value of future benefits to be paid to or on behalf of insureds or subscribers less the present value of future net premiums, discounted at valuation interest, mortality, and morbidity.

26. Accident and health contracts shall include contracts with health benefits or disability contingencies, including, but not limited to:

- Managed care contracts
- Income replacement contracts
- Expense reimbursement contracts
- Credit accident and health contracts
- Continuing care contracts
- Long-term care contracts
- Accidental death and dismemberment contracts

**Accident and Health Contracts—Definitions**

27. Accident and health contracts provide protection against economic losses resulting from accident, sickness or medical condition. This coverage may be provided under individual policies, under group or franchise policies, managed care contracts, Medicaid or Medicare risk contracts or it may be provided under certain special types of policies, such as credit accident and health insurance.

28. The economic losses which accident and health policies cover, or the types of benefits provided, will vary with different policies. The broad categories of economic losses protected against are medical and hospital expense and income replacement. For example, payments for hospital, surgical, or medical expenses may be provided under a hospital expense policy, while under other policies, a more comprehensive form of coverage, known as major medical insurance, may be offered. Similarly, policies may provide monthly benefits for loss of income from disability, either on a short-term or a long-term basis, or only for disabilities due to accident. Loss of life from accident may be covered under accidental death policies, while under certain limited accident policies, only accidental death from air travel may be covered.

29. Accident and health policies may be categorized by the form of policy through which the coverage is provided; it may be categorized according to the benefits provided by the policy; or it may be categorized by the contingencies insured against. These variations in types of policies and the benefits provided must be considered in discussing the reserves for accident and health policies.

30. Credit accident and health insurance contracts are similar to credit life insurance except the insurance protection is in the form of disability insurance.

31. Long-term care contracts represent any contract or policy rider providing coverage for not less than twelve consecutive months for each covered person for one or more necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Under long-term care contracts, the insured event is generally the inability of the contractholder to perform certain activities of daily living as compared to medical contracts which generally provide insurance protection against accident or sickness or disabilities contracts which generally provide income replacement protection.
Property and Casualty Contracts

32. Contracts which insure against damage to property by an insured peril or damage or injury to the insured or third parties shall be classified as property and casualty contracts. Damages shall include both physical and financial damages. Premiums from property and casualty contracts are generally recognized as earned over the exposure period of the contract in proportion to the amount of insurance protection provided.

33. The exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the duration of the contract. Premiums from property and casualty contracts shall be recognized as earned premium as discussed in SSAP No. 53—Property Casualty Contracts—Premiums.

34. These contracts shall include but shall not be limited to:
   - Traditional property and casualty insurance contracts
   - Title insurance contracts
   - Mortgage and financial guaranty contracts

Property and Casualty Contracts—Definitions

35. Property and casualty contracts include a variety of types of coverage, including, but not limited to, fire, workers compensation, automobile, multiple peril, professional and miscellaneous liability, and fidelity and surety bonds as further discussed below.

36. Types of insurance represent the perils that are insured by property and liability insurance companies and classified as property and casualty contracts. Some of the more important types of insurance are as follows:

   a. Fire and allied lines, which include coverage for fire, windstorm, hail, and water damage (but not floods);
   b. Ocean marine, which includes coverage for ships and their equipment, cargos, freight or money to be paid for use of the ships, and liability to third parties for damages. This type of insurance includes inland as well as ocean water transportation;
   c. Inland marine, which covers property in transit. (It also includes floaters, which are policies that cover movable property, such as a tourist’s personal property);
   d. Workers’ compensation, which compensates employees for injuries or illness sustained in the course of their employment;
   e. Automobile, which covers personal injury or automobile damage sustained by the insured and the related liability to third parties for losses caused by the insured;
   f. Multiple peril, which is a package coverage including most property and liability coverage except workers’ compensation, automobile insurance, and surety bonds;
   g. Professional liability, which covers physicians, surgeons, dentists, hospitals, engineers, architects, accountants, attorneys, and other professionals from liability arising from error or misconduct in providing or failing to provide professional service;
h. Miscellaneous liability, which covers most other physical and property damages not included under workers' compensation, automobile liability, and multiple peril policies. (Damages include death, cost of care, and loss of services resulting from bodily injury, as well as loss of use of property);

i. Fidelity bonds, which cover employers against dishonest acts by employees. Blanket fidelity bonds cover groups of employees; and

j. Surety bonds, which provide for monetary compensation to third parties for failure by the insured to perform specifically covered acts within a stated period. (Most surety bonds are issued for persons doing contract construction, persons connected with court actions, and persons seeking licenses and permits. Surety bonds also include financial guarantees.)

37. In addition to these types, insurance is provided by excess and surplus lines. Excess liability covers the insured against loss in excess of a stated amount, but only for losses as covered and defined in an underlying policy. The underlying amount is usually insured by another policy but can be retained by the insured. Surplus lines include coverage for risks that do not fit normal underwriting patterns, risks that are not commensurate with standard rates, or risks that will not be written by standard carriers because of general market conditions. These kinds of policies are generally written by carriers not licensed in the jurisdiction where the risk is located and generally are not subject to regulations governing premium rates or policy language.

38. Insurance is generally available to the individual as a means of protection against loss. There are instances, however, in which a person cannot obtain insurance in the voluntary insurance market. States have established involuntary plans to provide insurance to those with high risks whom otherwise would be excluded from obtaining coverage. A common example is the Automobile Insurance Plan (formerly called the Assigned Risk Plan). Under this plan, all companies writing automobile insurance in a state are allocated a share of the involuntary business on an equitable basis. Other states use a reinsurance plan, under which each insurer accepts all applicants but may place high-risk drivers in a reinsurance pool, with premiums paid to and losses absorbed by the pool. Still another approach is a joint underwriting association, in which one or more servicing companies are designated to handle high-risk drivers. All insurers in the state may be required to participate in the underwriting results. Another example of involuntary plans includes Fair Access to Insurance Requirements (FAIR) plans. FAIR plans are federally approved, state-supervised programs established to provide coverage for property in high-risk areas. Companies that operate in the state are assessed for any underwriting losses experienced by the FAIR plan.

39. Medical malpractice pools were established when health-care professionals and institutions were experiencing difficulty in obtaining liability insurance in the voluntary insurance market. The pools were established by law and currently exist in the majority of states. All insurers writing related liability insurance in such states are considered mandatory participants in the pools as a condition for their continuing authority to transact business in such states.

40. Workers' compensation pools are similar to FAIR plans. As with FAIR plans, companies operating in a given state are assessed a proportionate share, based on direct writings, of the underwriting results of the pool.

41. Title insurance insures, guarantees, or indemnifies owners of real property or the holders of liens or encumbrances thereon against loss or damage suffered by unidentified instances of defective titles, liens or encumbrances or the unmarketability of the title.
42. Mortgage guaranty insurance protects a lender against loss of all or a portion of the principal amount of a mortgage loan upon default of the mortgagor. This type of insurance provides no protection other than against loss due to default.

Deposit-Type Contracts

43. Deposit-type contracts do not incorporate insurance risk. Contracts issued by insurers that do not incorporate risk from the death or disability of policyholders (mortality or morbidity risk) are more comparable to financial or investment instruments issued by other financial institutions than to insurance contracts.

44. Deposit-type contracts shall include contracts without any life or disability contingencies, including, but not limited to, certain types of the following policy categories:

- Supplemental contracts
- Lottery payouts
- Structured settlements
- Guaranteed interest contracts
- Income settlement options
- Dividend and coupon accumulations
- Annuities certain
- Premium and other deposit funds

45. Under deposit-type contracts, the policyholder may assume all, some, or none of the investment risk, depending on the contract terms. Amounts can be deposited in lump sum, or periodically as allowed by the policy contract. Deposit-type contracts would include annuities certain, whose income payments have no reference to life contingencies and benefits are paid over a specified period (i.e., 10 years, 20 years, etc.).

Relevant Literature

46. This statement rejects the GAAP classifications (i.e., short-duration and long-duration) found in FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises, FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments, and FASB Statement No. 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long Duration Participating Contracts.

Effective Date and Transition

47. This statement is effective for years beginning January 1, 2001.

RELEVANT ISSUE PAPERS
Life Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for income recognition and policy reserves for all contracts classified as life contracts defined in SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force, except for credit insurance contracts which are discussed in SSAP No. 59—Credit Life and Accident and Health Insurance Contracts and variable products which are discussed in SSAP No. 56—Separate Accounts.

SUMMARY CONCLUSION

Types of Premiums

2. The gross premium is the amount charged to the policyholder and taken into operations as premium income.

3. The net premium is the amount calculated on the basis of the interest and mortality table used to calculate the reporting entity’s statutory policy reserves.

4. The difference between the gross premium and the net premium is referred to as “loading.” Loading generally includes allowances for acquisition costs and other expenses but also includes the differences in mortality and interest assumptions utilized for pricing and statutory reserving purposes.

Premium Income Recognition

5. Premiums shall be recognized as income on the gross basis (amount charged to the policyholder) when due from policyholders under the terms of the insurance contract. As a result, premium income shall include first year and renewal premiums, as well as any related premium adjustments (i.e., retrospective premium contracts which are discussed in SSAP No. 66—Retrospectively Rated Contracts) provided for by the contract. The contractual due date shall be established through the predetermined billing procedure agreed to by the parties. In addition, premium income shall include single and flexible premium amounts when received from the policyholder. Further, the recognition of premium income and the change in loading shall be consistent with the assumptions made in calculating the related policy reserve.

6. Premium income shall include dividends, coupons, guaranteed annual pure endowments, and similar benefits provided by the insurance contract when such amounts are applied by the terms of the contract to provide additional paid-up insurance, annuities, or to shorten the endowment or premium-paying period. Premiums and considerations waived by the reporting entity under disability provisions contained in its policies and contracts, and reported in operations as a disability benefit, are included in premium income.

7. Premium income shall exclude premiums that have been received by the reporting entity prior to the reporting date but which are due on or after the next policy anniversary date (i.e., advance premiums as discussed in paragraph 25).

8. Premium income shall be reduced for premiums returned and allowances to industrial policyholders for the direct payment of premiums.
9. Premium income shall be increased by reinsurance premiums assumed and reduced by reinsurance premiums ceded. Reinsurance premiums assumed and ceded are defined and addressed in SSAP No. 61—Life, Deposit-Type and Accident and Health Reinsurance.

10. Death or other benefits used to fund new policies shall be accounted for as a benefit payment and as a new premium, another type of income, or a liability, as appropriate.

Premium Adjustments

11. In the summary of operations, the change in gross deferred and uncollected premiums is recorded as premium income. Deferred premiums are further discussed in paragraphs 21 through 23. Since only the net premiums are included in the computation of reserves and reported as an asset, it is necessary to adjust the gross premium for an amount representing the change in loading on deferred and uncollected premiums. The change in loading is included as an expense in the summary of operations and is not shown as a reduction to premium income.

Uncollected Premium Balances

12. Gross premiums that are due and unpaid as of the reporting date, net of loading, shall be classified as uncollected premiums. Uncollected premium balances which are less than 90 days past due meet the definition of an asset, as defined in SSAP No. 4—Assets and Nonadmitted Assets, and are admitted assets to the extent they conform to the requirements of this statement.

Other Considerations Received

13. Considerations for supplementary contracts, dividends left on deposit to accumulate interest, and amounts deposited and accumulated for guaranteed interest and group annuity contracts shall be recognized as deposit-type funds or considerations for supplemental contracts, as appropriate. These amounts are further discussed in SSAP No. 52—Deposit-Type Contracts.

Policy Reserves

14. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the insurance contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. These statutory policy reserves are generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Statutory policy reserves meet the definition of liabilities as defined in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5.

15. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822 and the actuarial guidelines found in Part 9 of the NAIC Financial Examiners Handbook. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

16. The preceding two paragraphs summarize the general reserve requirements for all types of life contracts. In addition to these general reserve requirements, Appendix A-820 provides additional guidance with respect to certain types of accumulation annuities that have flexible features (e.g., guaranteed nonforfeiture benefits such as interest guarantees, annuitization options, bailout features, partial withdrawals) which can create varying benefit streams if elected by the policyholder. Specific policies with such flexible features include most individual and some group annuity contracts, but
exclude any disability and accidental death benefits in these contracts. For benefits under these contracts, reserves shall be established according to the Commissioners' Annuity Reserve Valuation Method (CARVM). Generally under CARVM, the difference between all possible future guaranteed benefits streams, including guaranteed nonforfeiture benefits, over the future considerations is computed as of the end of each contract year. Each of these differences is discounted to the reporting date at the applicable valuation interest rate. A reserve is then recorded based on the greatest present value difference of each of the contract year calculations.

17. Unlike traditional life insurance contracts, flexible premium universal life-type contracts do not have guaranteed premiums and some assumption as to future premiums is required. Appendix A-585 establishes a minimum reserving method for universal life-type contracts by providing guidance on how to estimate future premiums on flexible premium universal life-type contracts so that traditional valuation methodologies can be used. Alternative minimum reserves shall be required, if applicable, for flexible premium universal life-type contracts if the guaranteed maturity premium is less than the valuation net premium. Appendix A-585 shall be used in establishing reserves for flexible premium universal life-type contracts.

18. Policy reserves for fixed premium universal life-type contracts shall also follow guidance in Appendix A-585. Certain fixed premium products offer the policyholder a secondary guarantee. A secondary guarantee provides the policyholder a guaranteed set of cash values, death benefits, and maturity benefits that will be provided regardless of the performance of the policy value. Appendix A-585 requires all guarantees to be considered when establishing policy reserves and shall be followed in establishing reserves for fixed premium universal life-type contracts.

Valuation (Reserve) Method and Deferred Premiums

19. Reserves shall be established for all benefits guaranteed under the terms of the policy as of the reporting date using appropriate valuation methods, interest rates, mortality and morbidity rates, as applicable. However, as a practical expedient, reserves have been generally calculated as of the policy anniversary date (i.e., terminal reserves), not the reporting date. As a result, it is necessary to adjust the terminal reserve back to the reporting date. The components used to compute a terminal reserve shall consist of an interest rate, a mortality and/or morbidity table, and a valuation method (e.g., net level, full preliminary term, Commissioners' Reserve Valuation Method (CRVM), or CARVM). A terminal reserve is based on the assumption that all net premiums have been received, all interest earned, and all benefits paid to the end of the policy year.

20. Since terminal reserves are computed as of the end of a policy year and not the reporting date, the terminal reserve as of policy anniversaries immediately prior and subsequent to the reporting date are adjusted to reflect that portion of the net premium that is unearned at the reporting date. This is generally accomplished using either the mean reserve method or the mid-terminal method as discussed in the next four paragraphs. Other appropriate methods, including an exact reserve valuation, may also be used.

Mean Reserve Method

21. Under the mean reserve method, the policy reserve equals the average of the terminal reserve at the end of the policy year and the initial reserve (the initial reserve is equal to the previous year's terminal reserve plus the net annual valuation premium for the current policy year). When reserves are calculated on the mean reserve basis, it is assumed that the net premium for a policy is collected annually at the beginning of the policy year and that policies are issued ratably over the calendar year.

22. However, as premiums are often received in installments more frequently than annually and since the calculation of mean reserves assumes payment of the current policy year's entire net annual
premium, the policy reserve is overstated by the amount of net modal premiums not yet received for the current policy year as of the valuation date. As a result, it is necessary to compute and report a special asset to offset the overstatement of the policy reserve.

23. This special asset is termed “deferred premiums.” Deferred premiums are computed by taking the gross premium (or premiums) extending from (and including) the modal (monthly, quarterly, semiannual) premium due date or dates following the valuation date to the next policy anniversary date and subtracting any such deferred premiums that have actually been collected. Deferred premium assets shall also be reduced by loading. Since the calculation of mean reserves assumes payment of the current policy year’s entire net annual premium, deferred premium assets are considered admitted assets to compensate for the overstatement of the policy reserve.

**Mid-Terminal Method**

24. Under the mid-terminal method, the policy reserves are calculated as the average of the terminal reserves on the previous and the next policy anniversaries. These reserves shall be accompanied by an unearned premium reserve consisting of the portion of valuation premiums paid or due covering the period from the valuation date to the next policy anniversary date.

**Advance Premiums**

25. Advance premiums are those premiums that have been received by the reporting entity prior to the valuation date but which are due on or after the next policy anniversary date. The policyholder may remit one or more premiums in advance of specific due dates. Where premiums are remitted sufficiently far in advance, the premiums charged to the policyholder may be reduced or discounted to reflect the time value of money. The difference between the gross and discounted premium is ratably charged as interest in the summary of operations from the date of payment to the premium due date. At the premium due date, the amount received from the policyholder plus the accumulated interest equals the gross premium necessary to fund the policy. The total amount of such advance premiums, less any discount as of the valuation date, is reported as a liability in the statutory financial statement and is not considered premium income until due. The gross premium, not the net valuation premium, is recorded as the advance premium in recognition of the reporting entity’s liability to refund such premiums in the event the policy is terminated.

**Policyholder Dividend Liability**

26. A reporting entity shall accrue, as applicable, the following items relating to participating policies. They are dividends due and unpaid, dividends apportioned (or not yet apportioned) for payment in the following twelve months, and dividends left on deposit to accumulate interest.

27. Dividends due and unpaid represent dividends payable to the policyholder in the current year but which have not been disbursed or otherwise applied at the reporting date.

28. Dividends payable in the following calendar year represent the estimated amount of all dividends declared by a reporting entity’s board of directors prior to the end of the statement year which are not yet paid or due at the end of the year (dividends apportioned for payment) as well as all dividends payable in the following calendar year that have not been declared (dividends not yet apportioned for payment). For individual insurance the amount of this liability shall be equal to the aggregate amount of the dividends estimated to be payable in the following calendar year whether or not declared or apportioned. For group insurance and pensions, the amount of liability is generally equal to the portion of the dividend payable in the following calendar year which has been earned in the current calendar year.
29. Dividends left on deposit with the reporting entity shall be recorded in the amount of the deposit and accrued interest thereon. At the balance sheet date, the interest accrued but not yet credited to the policyholders' accounts, shall be established as part of this liability.

Coupons

30. Some entities issue policies that guarantee an annual return, usually evidenced by a coupon that is part of the policy and matures on the policy's anniversary. This return represents an annual pure endowment, and is essentially a return of premium previously paid by the policyholder. For matured coupons that have been left to accumulate, the liability is determined in the same way as the liability for dividend accumulations. Interest accrued is calculated for each coupon from the date each matures. The liability for unmatured policyholder coupons shall be the face value of the coupon, discounted at interest and mortality.

Reserve Recognition

31. The difference between the policy reserves for life contracts at the beginning and end of the reporting period shall be reflected as the change in reserves in the summary of operations, except for any difference due to a change in valuation basis.

Change In Valuation Basis

32. A change in valuation basis shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3). Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a new method and a specific transition that allows for grading.

Supplemental Benefits

33. In addition to the basic policy benefit, the insurance contract may provide supplemental benefits. Supplemental benefits include, but are not limited to, accidental death benefits and waiver of premium benefits. If the terms of the contract provide for these benefits, appropriate reserves shall be established in accordance with the applicable standards within this Codification.

Unearned Income

34. Amounts assessed that represent compensation to the reporting entity for services to be provided in future periods and which are required to be refunded upon policy termination are not earned in the period assessed. Such amounts, if not already considered in the policy reserve, shall be reported as unearned income, a liability, and recognized as income as the related services are provided.

Accelerated Benefits

35. Accelerated benefits are benefits payable under a life insurance contract to a policyholder or certificateholder during the lifetime of the insured, in anticipation of death or upon the occurrence of specified life-threatening or catastrophic conditions as defined by the policy or rider. These benefits
reduce the death benefit otherwise payable under the life insurance contract and are payable upon the occurrence of a single qualifying event which results in the payment of a benefit amount fixed at the time of acceleration. When benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves shall be determined in accordance with Appendices A-820 and A-620. Reserves for such benefits in the aggregate shall be sufficient to cover policies upon which no claim has yet arisen as well as policies upon which an accelerated claim has arisen. Accounting guidance for accelerated benefit payments made in the form of a loan are addressed in SSAP No. 49—Policy Loans. In addition, accelerated benefit payments, for those accelerated benefits that reduce the policy, shall not be deferred but shall be charged to the summary of operations as a benefit expense when paid to the policyholder.

Additional Reserves Not Included Elsewhere

36. Additional actuarial liabilities are commonly held for such items as:
   a. Valuation net premiums in excess of gross premiums (i.e., deficiency reserves);
   b. Provision for either nondeduction of deferred fractional premiums or return of premiums at death of the insured;
   c. Surrender values in excess of reserves otherwise required or carried;
   d. Substandard extra premiums, extra mortality on group conversions, and guaranteed insurability options;
   e. Additional reserves required based on cash flow testing and/or asset/liability matching requirements; and
   f. Additional reserves for policies which contain conversion privileges or future contingent benefits.

Disclosures

37. For life and annuity reserves the financial statements shall disclose the following:
   a. A description of reserve practices concerning the following:
      i. Waiver of deduction of deferred fractional premiums upon death of insured;
      ii. Return of portion of final premium for periods beyond the date of death; and
      iii. Amount of any surrender value promised in excess of the reserve as legally computed;
   b. The methods employed in the valuation of substandard policies;
   c. The amount of insurance, if any, for which the gross premiums are less than the net premiums according to the valuation standards;
   d. The method used to determine tabular interest, tabular less actual reserves released, and tabular cost (by formula or from the basic data for such items); and
   e. The nature of significant other reserve changes.
38. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and:

   (a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the insurer;

   (b) In installments over five years or more, with or without a reduction in interest rate during the installment period;

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in (v.(d)) below;

iii. At market value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current market value, and the liabilities are stated at the current market value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at market value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

   (a) In a lump sum without adjustment;

   (b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

   (c) In a lump sum subject to a fixed surrender charge of less than 5%;

   (d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified "bail out" rate and the "bail out" rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues;

   (e) All others;

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded;
39. If the reporting entity has reported life insurance premiums and annuity considerations deferred and uncollected on policies in force as of the financial statement date, disclose separately the amounts and the loading excluded for each of the following lines of business:

   a. Industrial business;
   b. Ordinary new business;
   c. Ordinary renewal;
   d. Credit life;
   e. Group life;
   f. Group annuity.

40. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

   a. Name and address of managing general agent or third party administrator;
   b. Federal Employer Identification Number;
   c. Whether such person holds an exclusive contract;
   d. Types of business written;
   e. Type of authority granted (i.e., underwriting, claims payment, etc.);
   f. Total premium written.

41. Reporting entities shall disclose the relative percentage of participating insurance, the method of accounting for policyholder dividends, the amount of dividends, and the amount of any additional income allocated to participating policyholders in the financial statements.

42. Refer to the preamble for further discussion regarding disclosure requirements.

RELEVANT ISSUE PAPERS
Deposit-Type Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for income recognition and policy reserves for all contracts classified as deposit-type contracts defined in SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force (SSAP No. 50).

SUMMARY CONCLUSION

Introduction

2. As discussed in SSAP No. 50, deposit-type contracts are those contracts that do not subject the reporting entity to any risks arising from policyholder mortality or morbidity. A mortality or morbidity risk is present if, under the terms of the contract, the reporting entity is required to make payments or forego required premiums contingent upon the death or disability (in the case of life and disability insurance contracts) or the continued survival (in the case of annuity contracts) of a specific individual or group of individuals.

3. Deposit-type contracts frequently grant policyholders significant discretion over the amount and timing of deposits and withdrawals. Reporting entities are frequently granted significant discretion over amounts that accrue to or that are assessed against policyholders.

4. Due to the absence of mortality and/or morbidity risk and the discretionary characteristics noted in the preceding paragraph, the accounting principles for income recognition and policy reserves for deposit-type contracts differ from the accounting for life contracts set forth in SSAP No. 51—Life Contracts, accident and health contracts established in SSAP No. 54—Individual and Group Accident and Health Contracts, and credit insurance contracts as discussed in SSAP No. 59—Credit Life and Accident and Health Insurance Contracts.

5. Categories of contracts that may not subject the reporting entity to risks arising from policyholder mortality or morbidity include, but are not limited to, certain types of the following policy categories:

- Supplemental contracts
- Lottery payouts
- Structured settlements
- Guaranteed interest contracts
- Income settlement options
- Dividend and coupon accumulations
- Annuities certain
- Premium and other deposit funds
Income Recognition

6. Contracts issued by a reporting entity that do not incorporate mortality or morbidity risk shall not be accounted for as insurance contracts. Amounts received as payments for such contracts shall not be reported as revenues but shall be recorded directly to an appropriate policy reserve account.

Policy Reserves

7. Statutory policy reserves shall be established for all contractual obligations of the reporting entity arising out of the provisions of the contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. Statutory policy reserves meet the definition of liabilities as defined in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5.

8. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822, and the actuarial guidelines found in Part 9 of the NAIC Financial Examiners Handbook. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

9. The policy reserve for contracts without life contingencies where the future benefits are fixed and guaranteed (e.g., certain supplemental contracts, lottery payouts, structured settlements, guaranteed interest contracts, income settlement options, annuities certain, and unmatured coupon accumulations) shall be based on the present value of the future guaranteed benefits discounted at the valuation interest rate. The policy reserve for all other contracts (e.g., certain premium and other deposit funds, and dividend and matured coupon accumulations) shall be based on the accumulated amounts paid plus an income accumulation based on the contract provisions, less any withdrawals and applicable surrender charges.

10. Policy reserves shall be increased for reinsurance assumed and decreased for reinsurance ceded as further described in SSAP No. 61—Life, Deposit-Type and Accident and Health Reinsurance.

Structured Settlements

11. Reporting entities that have accepted an assignment of obligations under structured settlements shall record those obligations consistent with the accounting and reporting provided for structured settlements in SSAP No. 65—Property and Casualty Contracts.

Cost Recognition

12. Interest credited to deposit-type contracts shall be recorded as an expense in the summary of operations when earned under the terms of the contract. Payments that represent a return of policyholder balances shall not be recorded as expenses. To the extent such payments differ from the recorded reserve, the difference shall be recorded in the summary of operations as a benefit expense.

Change In Valuation Basis

13. A change in valuation basis shall be defined as a change in the interest rate assumption or other factor affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3). Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than
as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a specific transition that allows for grading.

**Unearned Income**

14. Amounts assessed that represent compensation to the reporting entity for services to be provided in future periods and which are required to be refunded upon policy termination are not earned in the period assessed. Such amounts, if not already considered in the policy reserve, shall be reported as unearned income, a liability, and recognized as income as the related services are provided.

**Additional Reserves Not Included Elsewhere**

15. Additional actuarial liabilities are commonly held for such items as:
   a. Surrender values in excess of reserves otherwise required or carried; and
   b. Additional reserves required based on cash flow testing and/or asset/liability matching requirements.

**Disclosures**

16. For life and annuity reserves the financial statements shall disclose the following:
   a. A description of reserve practices including the amount of any surrender value promised in excess of the reserve as legally computed;
   b. The method of determination of tabular interest on funds not involving life contingencies; and
   c. The nature of significant other reserve changes.

17. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:
   a. Subject to discretionary withdrawal:
      i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;
         (a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the reporting entity; and
         (b) In installments over five years or more, with or without a reduction in the interest rate during the installment period.
      ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in subparagraph v.(d) below;
iii. At market value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current market value, and the liabilities are stated at the current market value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at market value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment;

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues; and

(e) All others.

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded;

e. Total net.

18. Refer to the preamble for further discussion regarding disclosure requirements.

Property Casualty Contracts—Premiums

SCOPE OF STATEMENT

1. This statement establishes general statutory accounting principles for the recording and recognition of premium revenue for property and casualty contracts as defined in SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force.

2. Specific statutory requirements for certain property and casualty premiums are addressed in the following statements: (a) SSAP No. 57—Title Insurance, (b) SSAP No. 58—Mortgage Guaranty Insurance, (c) SSAP No. 60—Financial Guaranty Insurance, (d) SSAP No. 62—Property and Casualty Reinsurance, (e) SSAP No. 65—Property and Casualty Contracts, and (f) SSAP No. 66—Retrospectively Rated Contracts and Contracts.

SUMMARY CONCLUSION

3. Except as provided for in paragraph 4, written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract. Frequently, insurance contracts are subject to audit by the reporting entity and the amount of premium charged is subject to adjustment based on the actual exposure. Premium adjustments are discussed in paragraphs 8 through 11 of this statement.

4. For workers’ compensation contracts, which have a premium that may periodically vary based upon changes in the activities of the insured, written premiums may be recorded on an installment basis to match the billing to the policyholder. Under this type of arrangement, the premium is determined and billed according to the frequency stated in the contract, and written premium is recorded on the basis of that frequency.

5. Written premiums for all other contracts shall be recorded on the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired.

6. The exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the contract period. Therefore, premiums from those types of contracts shall be recognized in the statement of income, as earned premium, using either the daily pro-rata or monthly pro-rata methods as described in paragraph 7. Certain statements provide for different methods of recognizing premium in the statement of operations for specific types of contracts. For contracts not separately identified in specific statements where the reporting entity can demonstrate the period of risk differs significantly from the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided.

7. One of the following methods shall be used for computation of the unearned premium reserve:

   a. Daily pro rata method—Calculate the unearned premium on each policy—At the end of each period, the calculation is made on each item of premium to ascertain the unexpired portion and to arrive at the aggregate unearned premium reserve;

   b. Monthly pro rata method—This method assumes that, on average, the same amount of business is written each day of any month so that the mean will be the middle of the month. For example, one-year premiums written during the first three months of the year
have, at the end of the year, the following unearned fractions: January-1/24; February-3/24; March-5/24.

8. Additional premiums charged to policyholders for endorsements and changes in coverage under the contract shall be recorded on the effective date of the endorsement and accounted for in a manner consistent with the methods discussed in paragraphs 4 through 7. This is done so that, at any point in time, a liability is accrued for unearned premium related to the unexpired portion of the policy endorsement.

Earned but Unbilled Premium

9. Adjustments to the premium charged for changes in the level of exposure to insurance risk (e.g., audit premiums on workers’ compensation policies) are generally determined based upon audits conducted after the policy has expired. Reporting entities shall estimate audit premiums, the amount generally referred to as earned but unbilled (EBUB) premium, and shall record the amounts as an adjustment to premium, either through written premium or as an adjustment to earned premium. The estimate for EBUB may be determined using actuarially or statistically supported aggregate calculations using historical company unearned premium data, or per policy calculations.

10. EBUB shall be adjusted upon completion of the audit and the adjustment shall be recognized as revenue immediately. Upon completion of an audit that results in a return of premiums to the policyholder, earned premiums shall be reduced.

11. Reporting entities shall establish all of the requisite liabilities associated with the asset such as commissions and premium taxes.

12. Ten percent of EBUB in excess of collateral specifically held and identifiable on a per policy basis, shall be reported as a nonadmitted asset. To the extent that amounts in excess of the 10% are not anticipated to be collected, they shall be written off against operations in the period the determination is made.

Premium Deficiency Reserve

13. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, and any future installment premiums on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency, with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have previously been expensed. For purposes of determining if a premium deficiency exists, insurance contracts shall be grouped in a manner consistent with how policies are marketed, serviced and measured. A liability shall be recognized for each grouping where a premium deficiency is indicated. Deficiencies shall not be offset by anticipated profits in other policy groupings.

14. If a reporting entity utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

Disclosures

15. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:
a. Name and address of managing general agent or third party administrator;
b. Federal Employer Identification Number;
c. Whether such person holds an exclusive contract;
d. Types of business written;
e. Type of authority granted (i.e., underwriting, claims payment, etc.); and
f. Total premium written.

16. Refer to the preamble for further discussion regarding disclosure requirements.

Individual and Group Accident and Health Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for income recognition and policy reserves for all contracts classified as individual and group accident and health contracts as defined in SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force, except for credit accident and health contracts which are discussed in SSAP No. 59—Credit Life and Accident and Health Contracts.

SUMMARY CONCLUSION

Premium Income Recognition

2. Premiums shall be recognized as income on the gross basis (amount charged to the policyholder or subscriber exclusive of copayments or other charges related to the receipt of healthcare services) when due from policyholders or subscribers, but no earlier than the effective date of coverage, under the terms of the contract. Due and uncollected premiums shall follow the guidance in SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers (SSAP No. 6), to determine the admissibility of premiums and related receivables. Premiums waived by the reporting entity under disability provisions contained in its policies and contracts, and reported in operations as a disability benefit, are included in premium income.

3. Premium income shall exclude premiums that have been received by the reporting entity prior to the valuation date but which are due on or after the next premium due date (i.e., advance premiums as discussed below).

4. Premium income shall be reduced for premiums returned and allowances to industrial policyholders for the direct payment of premiums.

5. Premium income shall be increased by reinsurance premiums assumed and reduced by reinsurance premiums ceded. Reinsurance premiums assumed and ceded are defined and addressed in SSAP No. 61—Life, Deposit-Type and Accident and Health Reinsurance.

6. Advance premiums are those premiums that have been received by the reporting entity prior to the valuation date but which are due on or after the next premium due date. The total amount of such advance premiums is reported as a liability in the statutory financial statements and is not considered premium income until due. The gross premium, not the net valuation premium, is recorded as the advance premium in recognition of the reporting entity’s liability to refund such premiums in the event the policy is terminated.

7. As discussed in SSAP No. 47—Uninsured Plans, amounts received on behalf of uninsured plans or the uninsured portion of partially insured plans shall not be reported as premium income. Administrative fees for servicing the uninsured plans shall be deducted from general expenses. Conversely, income relating to the insured portion of any plan shall be reported as premium income.
SSAP No. 54

Statement of Statutory Accounting Principles

Reserve Requirements

8. The aggregate reserve for individual and group accident and health contracts generally consists of a policy reserve and a claim reserve as well as certain other miscellaneous reserves discussed in paragraph 23. The aggregate reserve reflects the future liabilities arising under accident and health policies. Policy reserves have traditionally been referred to as active life reserves and include unearned premium reserves. Policy reserves reflect that premiums cover future liabilities in addition to current claim costs and expenses. Claim reserves, sometimes referred to as disabled life reserves, are required on claims which involve continuing loss. The reserve in this case is a measure of the present value of future benefits or amounts not yet due as of the statement date (the unaccrued portion) which are expected to arise under claims which have been incurred as of the statement date. The aggregate reserve for individual and group accident and health contracts does not include claim liabilities which are the amounts payable at the reporting date (the accrued portion) and reflect the reporting entity's liability for benefits due as of the statement date. Claim liabilities are further discussed in SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses.

9. Policy reserves for individual and group accident and health contracts shall include an unearned premium reserve and, as applicable, an additional or contract reserve where constant or level premiums are assumed for certain noncancelable or guaranteed renewable contracts. The claim reserve shall consist of a reserve for the present value of amounts not yet due.

10. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. A prospective gross premium valuation is the ultimate test of reserve adequacy as of a given valuation date. Statutory reserves meet the definition of liabilities as defined in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5.

11. The reserving methodologies and assumptions used in calculating individual and group accident and health reserves shall meet the provisions of Appendices A-010, A-641, A-820 and A-822 and the actuarial guidelines found in Part 9 of the NAIC Financial Examiners Handbook. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

Policy Reserves

12. Unearned premium reserves shall be required for all accident and health contracts for which premiums have been reported for a period beyond the date of valuation other than premiums paid in advance. The minimum unearned premium reserve that applies to the premium period beyond the valuation date shall be based on the valuation net modal premium if contract reserves are required and the gross modal unearned premium reserve if contract reserves are not required. If premiums due and unpaid are carried as an asset, such premiums must be treated as premiums in force, subject to unearned premium reserve determination. The value of unpaid commissions, premium taxes, and the cost of collection associated with due and unpaid premiums must be carried as an offsetting liability. In no event shall the aggregate policy reserve for all contracts be less than the unearned gross premium under such contracts. Additionally, the reserve shall never be less than the expected claims for the period beyond the valuation date represented by the unearned premium reserve, to the extent not provided for elsewhere.

13. Contract or additional reserves on accident and health contracts shall be recorded when premiums and benefits are not earned or incurred at the same incidence over the policy period (e.g.,
constant (level) or step-rated premium contracts where premiums and related morbidity, risk of loss, and the cost of coverage are not evenly matched). The additional reserves shall be set aside from the early years’ level premiums to pay the claims that experience indicates will be incurred as the policy continues in force. The fact that the reporting entity may have the right to increase premiums or to decline renewal of the policies for certain reasons has no bearing on whether or not a contract or additional reserve should be held. These reserves shall apply regardless of whether or not benefits are currently being received, and are in addition to unearned premium reserves discussed in paragraph 12.

14. Contract or additional reserves shall also be recorded where, due to the gross premium structure, the future benefits exceed the future net premiums (e.g., group conversion policies) or where the contract provides for the extension of benefits after the termination of the coverage (e.g., deferred maternity and other similar benefits).

15. A terminal reserve for accident and health contracts is the policy reserve at the end of a policy year to cover the assumed difference between future benefits and future net premiums. The components used to compute a terminal reserve shall consist of an interest rate, a mortality and/or morbidity table, and a valuation method (e.g., net level, one-year full preliminary term, and two-year full preliminary term) and where allowed, other assumptions. A terminal reserve is based on the assumption that all net premiums have been received, all interest earned, and all benefits paid to the end of the policy year.

16. Since terminal reserves are computed as of the end of a policy year and not the reporting date, the terminal reserve as of policy anniversaries immediately prior to and subsequent to the reporting date are adjusted to reflect that portion of the net premium that is unearned at the reporting date. This is generally accomplished using either the mean reserve method or the mid-terminal method as discussed in paragraphs 21 through 24 of SSAP No. 51—Life Contracts. Other appropriate methods, including an exact reserve valuation, may also be used.

17. For individual and group accident and health contracts, negative reserves on any benefit shall be offset against positive reserves for other benefits in the same policy but the mean reserve on any policy shall never be taken as less than one-half the valuation net premium. The majority of group accident and health policies are written in conjunction with group life or other policies. If these policies are an experience rated package, positive or favorable margins on one of the contracts can offset the need to establish additional reserves on the other contracts.

Additional Reserves

18. When the expected claims payments or incurred costs, claim adjustment expenses and administration costs exceed the premiums to be collected for the remainder of a contract period, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency, with a corresponding charge to operations. For purposes of determining if a premium deficiency exists, contracts shall be grouped in a manner consistent with how policies are marketed, serviced and measured. A liability shall be recognized for each grouping where a premium deficiency is indicated. Deficiencies shall not be offset by anticipated profits in other policy groupings. Such accruals shall be made for any loss contracts, even if the contract period has not yet started.

Claim Reserves

19. Claim reserves shall be accrued for estimated costs of future health care services to be rendered that the reporting entity is currently obligated to provide or reimburse as a result of premiums earned to date and that would be payable after the reporting date under the terms of arrangements, regulatory requirements or other requirements if the insured’s or subscriber’s illness or disability were to continue.
It shall include a reserve for disability benefits covered under premium waiver provisions. For individual and group disability claims with a duration of less than two years, reserves may be based on the reporting entity's experience, if credible, or other methods, as appropriate. Generally, reserves for disability income claims with durations of greater than two years shall be determined based on a tabular method using the age of the insured at the date of disablement, the number of months the insured already has been disabled, and the number of months remaining in the benefit period.

Reserve Recognition

20. The difference between the aggregate reserve for accident and health contracts at the beginning and end of the reporting period shall be reflected as the change in reserves in the summary of operations, except for any difference due to a change in valuation basis.

Change In Valuation Basis

21. A change in valuation basis shall be defined as a change in the interest rate, mortality and morbidity assumptions, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3). Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a new method and a specific transition that allows for grading.

Supplemental Benefits

22. In addition to the basic policy benefit, the contract may provide supplemental benefits. Supplemental benefits include, but are not limited to, accidental death benefits, dental and waiver of premium benefits. If the terms of the contract provide for these benefits, appropriate reserves shall be established in accordance with the applicable standards within this Codification.

Reserve Adequacy

23. As discussed in Appendix A-010, a prospective gross premium valuation is the ultimate test of the adequacy of a reporting entity’s accident and health reserves as of a given valuation date and shall be determined on the basis of unearned premium reserves, contract or additional reserves, claim reserves (including claim liabilities), and miscellaneous reserves combined; however, each component shall be computed separately.

Additional Reserves Not Included Elsewhere

24. Reserves for experience-rating refunds or the dividend liability in group policies are discussed in SSAP No. 66—Retrospectively Rated Contracts.

25. Additional actuarial or other liabilities are commonly held for such items as:

a. Surrender values in excess of reserves otherwise required or carried;

b. Additional reserves required based on cash flow testing and/or asset/liability matching requirements; and
c. Additional reserves for policies which contain conversion privileges or future contingent benefits.

Contracts Subject to Redetermination

26. This statement also applies to other contracts which are subject to redetermination such as Federal (and State) Groups – subject to rate adjustments through audits by the Office of Personnel Management (“OPM”). Reporting entities are required to give Federal Groups the lowest rates that are being charged to similar groups.

27. Amounts due from insureds or subscribers and amounts due to insureds or subscribers under contracts subject to redetermination meet the definitions of assets and liabilities as set forth in SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5, respectively.

28. Contract redeterminations shall be estimated based on the experience to date. The method used to estimate the liability shall be reasonable based on the reporting entity’s procedures, and consistent among reporting periods. An examination of contract requirements in relation to the rates being charged and the current status of applicable audits (e.g., OPM, Health Care Finance Administration and other Federal, state or government department) is a common method used to estimate such contract redeterminations.

29. Premium adjustments for contracts subject to redetermination are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Accrued premium adjustments shall be recorded as a write-in for other than invested assets, with a corresponding entry to premiums; accrued return premium adjustments shall be recorded as a liability with a corresponding entry to premiums.

30. If, in accordance with SSAP No. 5, it is probable that the additional premium adjustment is uncollectible, any uncollectible premium shall be written off against operations in the period the determination is made and the disclosure requirements outlined in SSAP No. 5 shall be made.

31. Premium adjustments for contracts subject to redetermination shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If such premiums are not billed in accordance with the policy provisions or contract provisions, or the policy provisions or contract provisions do not address the due date of such premiums, the accrual shall be nonadmitted. This is consistent with the guidance for audit premiums established in SSAP No. 6.

Disclosures

32. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.); and
f. Total premium written.

33. Reporting entities shall disclose the relative percentage of participating insurance, the method of accounting for policyholder dividends, the amount of dividends, and the amount of any additional income allocated to participating policyholders in the financial statements.

34. If a premium deficiency reserve is established in accordance with paragraph 18, disclose the amount of that reserve.

35. The financial statements shall disclose the method used by the reporting entity to estimate premium adjustments for contracts subject to redetermination. The amount of net premiums that are subject to such adjustments, as well as the corresponding percentage to total net premiums, shall be disclosed.

36. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

38. This statement rejects FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises relating to accounting and reporting for individual and group accident and health contracts.

Effective Date and Transition

39. This statement is effective for years beginning January 1, 2001. Contracts issued prior to January 1, 2001 shall be accounted for based on the laws and regulations of the domiciliary state. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for recording liabilities for unpaid claims and claim adjustment expenses for life insurance contracts and accident and health contracts and unpaid losses and loss adjustment expenses for property and casualty insurance contracts. This statement applies to all insurance contracts as defined in SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force (SSAP No. 50).

2. This statement does not address policy reserves for life and accident and health policies. These reserves are addressed in SSAP No. 51—Life Contracts, SSAP No. 52—Deposit-Type Contracts, SSAP No. 54—Individual and Group Accident and Health Contracts (SSAP No. 54), and SSAP No. 59—Credit Life and Accident and Health Insurance Contracts.

3. This statement does not address liabilities for punitive damages. These liabilities shall be recorded in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5).

SUMMARY CONCLUSION

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expense when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event and, in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income.

5. The following are types of future costs relating to property and casualty contracts, as defined in SSAP No. 50, which shall be considered in determining the liabilities for unpaid losses and loss adjustment expenses:
   a. Reported Losses: Expected payments for losses relating to insured events that have occurred and have been reported to, but not paid by, the reporting entity as of the statement date;
   b. Incurred But Not Reported Losses (IBNR): Expected payments for losses relating to insured events that have occurred but have not been reported to the reporting entity as of the statement date. As a practical matter, IBNR may include losses that have been reported to the reporting entity but have not yet been entered to the claims system or bulk provisions. Bulk provisions are reserves included with other IBNR reserves to reflect deficiencies in known case reserves;
   c. Loss Adjustment Expenses: Expected payments for costs to be incurred in connection with the adjustment and recording of losses defined in subparagraphs 5 a. and 5 b. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage. Loss adjustment expenses can be classified into
two broad categories: Defense and Cost Containment (DCC) and Adjusting and Other (AO):

i. DCC include defense, litigation, and medical cost containment expenses, whether internal or external. DCC include, but are not limited to, the following items:

(a) Surveillance expenses;
(b) Fixed amounts for medical cost containment expenses;
(c) Litigation management expenses;
(d) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by accident year;
(e) Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;
(f) Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and
(g) The cost of engaging experts;

ii. AO are those expenses other than DCC as defined in (i) above assigned to the expense group “Loss Adjustment Expense”. AO include, but are not limited to, the following items:

(a) Fees and expenses of adjusters and settling agents;
(b) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;
(c) Attorney fees incurred in the determination of coverage, including litigation between the reporting entity and the policyholder; and
(d) Fees and salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in the capacity of an adjuster.

6. The following future costs relating to life and accident and health indemnity contracts, as defined in SSAP No. 50, shall be considered in determining the liability for unpaid claims and claim adjustment expenses:

a. Accident and Health Claim Reserves: Reserves for claims that involve a continuing loss. This reserve is a measure of the future benefits or amounts not yet due as of the statement date which are expected to arise under claims which have been incurred as of the statement date. This shall include the amount of claim payments that are not yet due such as those amounts commonly referred to as disabled life reserves for accident and health claims. The methodology used to establish claim reserves is discussed in SSAP No. 54.
b. Claim Liabilities for Life/Accident and Health Contracts:
   i. Due and Unpaid Claims: Claims for which payments are due as of the statement date;
   ii. Resisted Claims in Course of Settlement: Liability for claims that are in dispute and are unresolved on the statement date. The liability either may be the full amount of the submitted claim or a percentage of the claim based on the reporting entity’s past experience with similar resisted claims;
   iii. Other Claims in the Course of Settlement: Liability for claims that have been reported but the reporting entity has not received all of the required information or processing has not otherwise been completed as of the statement date;
   iv. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as death, accident, or illness) but has not been reported to the reporting entity as of the statement date.

c. Claim Adjustment Expenses for Accident and Health Reporting Entities: Costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in subparagraphs 6 a. and 6 b. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage;

d. Claim Adjustment Expenses for Life Reporting Entities: Costs expected to be incurred (including legal and investigation) in connection with the adjustment and recording of life claims defined in subparagraph 6 b.

7. The following costs relating to managed care contracts as defined in SSAP No. 50 shall be considered in determining the claims unpaid and claims adjustment expenses:
   a. Claims unpaid for Managed Care Reporting Entities:
      i. Unpaid amounts for costs incurred in providing care to a subscriber, member or policyholder including inpatient claims, physician claims, referral claims, other medical claims, resisted claims in the course of settlement and other claims in the course of settlement;
      ii. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as an accident, illness or other service) but has not been reported to the reporting entity as of the statement date;
      iii. Additional unpaid medical costs resulting from failed contractors under capitation contracts and provision for losses incurred by contractors deemed to be related parties for which it is probable that the reporting entity will be required to provide funding;
   b. Claim Adjustment Expenses for Managed Care Reporting Entities: Costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in subparagraph 7 a. of this statement. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining
records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage;

c. Liabilities for percentage withholds ("withholds") from payments made to contracted providers;

d. Liabilities for accrued medical incentives under contractual arrangements with providers and other risk sharing arrangements whereby the health entity agrees to share savings with contracted providers.

8. The liability for claim reserves and claim liabilities, unpaid losses, and loss/claim adjustment expenses shall be based upon the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience. These liabilities shall not be discounted unless authorized for specific types of claims by specific SSAPs, including SSAP No. 54 and SSAP No. 65—Property and Casualty Contracts.

9. Various analytical techniques can be used to estimate the liability for IBNR claims, future development on reported losses/claims, and loss/claim adjustment expenses. These techniques generally consist of statistical analysis of historical experience and are commonly referred to as loss reserve projections. The estimation process is generally performed by line of business, grouping contracts with like characteristics and policy provisions. The decision to use a particular projection method and the results obtained from that method shall be evaluated by considering the inherent assumptions underlying the method and the appropriateness of those assumptions to the circumstances. No single projection method is inherently better than any other in all circumstances. The results of more than one method should be considered.

10. For each line of business and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses, and loss/claim adjustment expenses. Because the ultimate settlement of claims (including IBNR for death claims and accident and health claims) is subject to future events, no single claim or loss and loss/claim adjustment expense reserve can be considered accurate with certainty. Management's analysis of the reasonableness of claim or loss and loss/claim adjustment expense reserve estimates shall include an analysis of the amount of variability in the estimate. If, for a particular line of business, management develops its estimate considering a range of claim or loss and loss/claim adjustment expense reserve estimates bounded by a high and a low estimate, management's best estimate of the liability within that range shall be recorded. The high and low ends of the range shall not correspond to an absolute best-and-worst case scenario of ultimate settlements because such estimates may be the result of unlikely assumptions. Management's range shall be realistic and, therefore, shall not include the set of all possible outcomes but only those outcomes that are considered reasonable.

11. In the rare instances when, for a particular line of business, after considering the relative probability of the points within management's estimated range, it is determined that no point within management's estimate of the range is a better estimate than any other point, the midpoint within management's estimate of the range shall be accrued. It is anticipated that using the midpoint in a range will be applicable only when there is a continuous range of possible values, and no amount within that range is any more probable than any other. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine its best estimate of the liability.
12. If a reporting entity chooses to anticipate salvage and subrogation recoverables (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), the recoverables shall be estimated in a manner consistent with paragraphs 8 through 10 of this statement and shall be deducted from the liability for unpaid claims or losses.

13. Changes in estimates of the liabilities for unpaid claims or losses and loss/claim adjustment expenses resulting from the continuous review process, including the consideration of differences between estimated and actual payments, shall be considered a change in estimate and shall be recorded in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3). SSAP No. 3 requires changes in estimates to be included in the statement of operations in the period the change becomes known.

Disclosures

14. The financial statements shall include the following disclosures for each year full financial statements are presented. Life and annuity contracts are not subject to this disclosure requirement.
   a. The balance in the liabilities for unpaid claims and unpaid losses and loss/claim adjustment expense reserves at the beginning and end of each year presented;
   b. Incurred claims, losses, and loss/claim adjustment expenses with separate disclosures of the provision for insured or covered events of the current year and increases or decreases in the provision for insured or covered events of prior years;
   c. Payments of claims, losses, and loss/claim adjustment expenses with separate disclosures of payments of losses and loss/claim adjustment expenses attributable to insured or covered events of the current year and insured or covered events of prior years;
   d. The reasons for the change in the provision for incurred claims, losses, and loss/claim adjustment expenses attributable to insured or covered events of prior years. The disclosure should indicate whether additional premiums or return premiums have been accrued as a result of the prior-year effects;
   e. A summary of management’s policies and methodologies for estimating the liabilities for losses and loss/claim adjustment expenses, including discussion of claims for toxic waste cleanup, asbestos-related illnesses, or other environmental remediation exposures;
   f. Disclosure of the amount paid and reserved for losses and loss/claim adjustment expenses for asbestos and/or environmental claims, on a gross and net of reinsurance basis (the reserves required to be disclosed in this section shall exclude amounts relating to policies specifically written to cover asbestos and environmental exposures); and
   g. Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), deducted from the liability for unpaid claims or losses.

15. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

16. Although FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises (FAS 60), is rejected in SSAP No. 50, this statement is consistent with the guidance provided for the recognition of claim costs in FAS 60 with the exception of the statutory requirement to accrue the midpoint of a range
of loss or loss adjustment expense reserve estimates when no point within management’s continuous range of reasonably possible estimates is determined to be a better estimate than any other point.

17. This statement also rejects AICPA Statement of Position 92-4, Auditing Insurance Entities’ Loss Reserves.

Effective Date and Transition

18. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

Statutory Accounting

RELEVANT ISSUE PAPERS
Separate Accounts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for accounting and reporting for separate accounts in both the general account and separate account statements.

SUMMARY CONCLUSION

Introduction

2. Separate accounts are used to fund variable life insurance, variable annuities, modified guaranteed annuities and modified guaranteed life insurance, or various group contracts under pension or other employee benefit plans where funds are held in a separate account to support a liability. When separate accounts are established and filed accordingly, they may be used to fund guaranteed benefits. Separate account contracts may also be used to accumulate funds which are intended to be applied at some later time to provide life insurance or to accumulate proceeds applied under settlement or dividend options.

3. Assets held in separate accounts are owned by the insurer. All investment income and realized and unrealized capital gains and losses from assets allocated to a separate account, net of related investment expenses, are generally reflected in the separate account and, except for modified guaranteed annuities, modified guaranteed life insurance, and separate accounts established and filed to provide guaranteed benefits, investment performance is generally not guaranteed by the insurer. Charges relating to contract guarantees, administration, and investment management are deducted from separate accounts.

General Account Reporting

4. Insurance activities such as sales, underwriting and contract administration, premium collection and payment of premium taxes, claims, and benefits are functions of the insurance company distinct from the separate account and shall be accounted for as transactions of the general account.

5. As a result, premiums, annuity considerations, and deposit-type funds on separate account contracts, shall be recorded as income in the Summary of Operations of the general account and as transfers to premiums and considerations in the separate account statement. Charges (e.g., fees associated with investment management, administration, and contract guarantees) assessed on the separate accounts, as well as the net gain from operations of the separate account, shall be recorded as income in the Summary of Operations of the general account. Expenses relating to investment management, administration, and contract guarantees pertaining to separate account operations, as well as benefits and surrenders incurred on behalf of separate account contracts, net transfers between separate accounts, commissions, and premium taxes (if any) shall be recorded as expenses in the Summary of Operations of the general account.

6. The general account shall include the total assets and liabilities, including transfers due or accrued, of any separate accounts business which it maintains and, therefore, the surplus, if any, of its separate accounts business. Transfers to the general account due or accrued shall be reported on a net basis so that the asset and the liability totals of the general account are not overstated. Changes in the surplus of the separate accounts business of an insurer, except for changes resulting from the net gain from operations of the separate account, shall be charged or credited directly to the unassigned funds (surplus) of the general account.
7. Where a variable annuity contract or variable life insurance contract contains a guaranteed minimum death benefit, any reserve liability for such death benefit provision shall be recorded and held in the general account based on the reserving guidance in paragraphs 22 and 23. Any differences between the benefit paid and the separate account asset value of the contract shall be charged against or credited to the general account in its net gain from operations.

8. Separate account surplus may not become negative. For example, for separate account contracts which have annuitized (i.e., contracts in the payout stage), lower than expected mortality on variable annuity contracts containing mortality guarantees may cause a deficiency in the investment funds underlying the contract reserves. Thus the general account incurs an expense and the separate account realizes revenue to cover the deficiency, if necessary. Conversely, excess funds from higher than expected mortality will result in mortality gains, which are included in the Summary of Operations of the separate account and are ultimately recorded as equity in net income from separate account operations as discussed in paragraph 5.

9. Separate account surplus created through the use of the commissioners’ reserve valuation method (CRVM), commissioners’ annuity reserve valuation method (CARVM), or other reserving methods, shall be reported by the general account as an unsettled transfer from the separate account. The net change on such transfers shall be included as a part of the net gain from operations in the general account.

10. Surplus funds transferred from the general account to the separate account, commonly referred to as seed money, and earnings accumulated thereon shall be reported as surplus in the separate accounts until transferred or repatriated to the general account. The transfer of such funds between the separate account and the general account shall be reported as surplus contributed or withdrawn during the year.

11. If an Asset Valuation Reserve (AVR) is required for investments held by separate accounts, it is combined with the general account AVR and accounted for in the general account financial statements (see SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve). The criteria for determining when an AVR is required for separate accounts are described in paragraph 15 of this statement.

Separate Account Reporting

12. The separate accounts annual statement is concerned with the investment activities and obligations of the separate accounts and with the transfer of funds between the separate account and the general account. As a result, the separate account statement shall report only the assets, liabilities, and operations of the separate account and shall not include general account expenses related to investment management, administration, or contract guarantees pertaining to separate account operations which are recorded in the general account.

13. The separate account records premiums, considerations and deposit-type funds (net of loading for sales charges such as commissions and premium taxes) and receipts (other than for net investment income and realized capital gains and losses) as income transfers from the general account. Net investment income and realized and unrealized capital gains and losses relating to the investment operations of the separate account are recorded as income in the Summary of Operations. When the contract provides for such, expenses and taxes associated with the separate account investment operations shall be deducted in the determination of net investment income. Benefits and surrenders, reserve transfers, policy loans, policyholder charges (e.g., fees associated with investment management, administration, and contract guarantees), and federal income taxes relating to the separate account are recorded as expense transfers to the general account in the Summary of Operations. The net change in
aggregate reserves relating to separate account contracts is reported as an expense in the Summary of Operations.

14. Assets supporting fund accumulation contracts (GICs), which do not participate in underlying portfolio experience, with a fixed interest rate guarantee, purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer, will be recorded as if the assets were held in the general account. Assets supporting all other contractual benefits shall be recorded at market value on the date of valuation, or if there is no readily available market, then in accordance with the valuation procedures in the applicable contract.

Separate Account AVR and IMR Reporting

15. An AVR is generally required for separate accounts when the insurer, rather than the policyholder/contractholder, suffers the loss in the event of asset default or market value loss. An AVR is required unless:

   a. The asset default or market value risk is borne directly by the policyholders; or

   b. The regulatory authority for such separate accounts already explicitly provides for a reserve for asset default risk, where such reserves are essentially equivalent to the AVR.

16. Assets supporting traditional variable annuities and variable life insurance generally do not require an AVR because the policyholders/contractholders bear the risk of change in the value of the assets. However, an AVR is required for that portion of the assets representing the insurer’s equity interest in the investments of the separate account (e.g., seed money).

17. Assets supporting typical modified guaranteed contracts, market value adjusted contracts, and contracts with book value guarantees similar to contracts generally found in the general account do require an AVR because the insurer is responsible for credit related asset loss.

18. Certain separate accounts are also required to maintain an Interest Maintenance Reserve (IMR). The IMR requirements for investments held in separate accounts are applied on an account by account basis. If an IMR is required for a separate account, all of the investments in that separate account are subject to the requirement. If an IMR is not required for a separate account, none of the investments in that separate account are subject to the requirement.

19. An IMR is required for separate accounts with assets recorded at book value, but is not required for separate accounts with assets recorded at market value. For example, separate accounts for traditional variable annuities or variable life insurance do not require an IMR because assets and liabilities are valued at market value.

20. If an IMR is required for investments held by separate accounts, it is kept separate from the general account IMR and accounted for in the separate accounts statement.

21. The AVR and IMR shall be calculated and reported in accordance with the NAIC Annual Statement Instructions for Life, Accident and Health Insurance Companies.

Policy Reserves

22. Statutory policy reserves shall be established for all contractual obligations of the insurer arising out of the provisions of the insurance contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. These statutory policy
reserves are generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. Statutory policy reserves meet the definition of liabilities as defined in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5.

23. The reserving methodologies and assumptions used in computation of policy reserves shall also meet the provisions of Appendices A-250, A-270, A-255, A-585, A-588, A-620, A-820, A-822, and the actuarial guidelines found in Part 9 of the NAIC Financial Examiners Handbook. Where separate account contracts have guaranteed elements, the basis for determining the value of the liability shall be consistent with the basis used for asset values (i.e., valuation interest rates as defined in Appendix A-820 shall be used when assets are recorded as if held in the general account and current interest rates based on market rates shall be used when assets are recorded at market). Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

Other Liabilities

24. The separate account shall accrue as a liability, subject to contractual provisions, amounts payable, including, but not limited to:

a. Fees associated with investment management, administration, and contract guarantees;

b. Investment expenses;

c. Investment taxes, licenses, and fees (Investment taxes such as real estate taxes, licenses and fees (excluding federal income taxes) are usually paid directly by the separate account but may be transferred to the general account for payment);

d. Federal income taxes;

e. Unearned investment income;

f. Net transfer due to (from) the general account;

g. Remittances and items not allocated;

h. Payable for investments purchased;

i. Net adjustments in assets and liabilities due to foreign exchange rates.

Seed Money

25. When a new separate account is initiated, the insurer may make a temporary transfer of surplus funds commonly referred to as seed money to the separate account. Such funds and earnings accumulated thereon shall be reported as surplus in the separate accounts statement until transferred or repatriated to the general account. The transfer of such funds to and from the separate account shall be reported as surplus contributed or withdrawn during the year.

Disclosures

26. The general account financial statement shall include a description of the general nature and characteristics of the various kinds of separate accounts business conducted by the company and
included in the company’s Separate Accounts Statement. For each grouping (as detailed in paragraph 27), the following shall be disclosed:

a. Premiums, considerations or deposits received during the year;

b. Reserves by the valuation basis of the investments supporting the reserves at the financial statement date. List reserves for separate accounts whose assets are carried at market value separately from those whose assets are carried at amortized cost/book value;

c. Reserves by withdrawal characteristics, i.e., whether or not the separate account is subject to discretionary withdrawal or market value adjustment, or to withdrawal at book value with or without surrender charge;

d. Reserves for asset default risk, as described in paragraph 15 b., that are recorded in lieu of AVR.

27. Separate accounts shall be addressed in the following groupings (which are the same as those used for risk-based capital):

a. Separate Accounts with Guarantees:

   i. Indexed separate accounts, which are invested to mirror an established index which is the basis of the guarantee;

   ii. Nonindexed separate accounts, with reserve interest rate at no greater than 4% and/or fund long-term interest guarantee in excess of a year that does not exceed 4%;

   iii. Nonindexed separate accounts, with reserve interest rate at greater than 4% and/or fund long-term interest guarantee in excess of a year that exceeds 4%.

b. Nonguaranteed Separate Accounts—Variable separate accounts, where the benefit is determined by the performance and/or market value of the investments held in the separate account. Include variable accounts with incidental risks, nominal expense, and minimum death benefit guarantees.

28. Provide a reconciliation of the amount reported as transfers to and from separate accounts in the Summary of Operations of the separate accounts statement and the amount reported as net transfers to or from separate accounts in the Summary of Operations of the general accounts statement.

29. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

Effective Date and Transition

31. This statement is effective for years beginning January 1, 2001. Contracts with assets held in a Separate Account that were issued in accordance with applicable state laws and regulations and issued
prior to that effective date, for which assets and liabilities have been recorded using a consistent basis since issue, i.e., both assets and liabilities are recorded either as if in the general account ("book value") or as at market value (current interest rates based on market rates shall be used for liabilities when assets are recorded at market value), shall continue to be recorded using such basis until such time as the applicable contract terms or provisions are substantially changed, such as by a contract amendment modifying interest rate or withdrawal provisions. Changes that do not require change in the basis of recording would include: address changes, continued deposits, and other non-substantive changes such as these. For example, additional funds received after January 1, 2001 under contracts issued prior to January 1, 2001 may continue to be recorded using the basis in effect prior to January 1, 2001 until such time as a triggering change is made. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Title Insurance

SCOPE OF STATEMENT

1. Title insurance insures that the policyholder has title to the property on the subject real estate as of the date of policy issuance, subject to exceptions and exclusions in the policy. When issued, a title policy has a one time premium and reserves are established by the title insurance company. Title insurance differs from other lines of property and casualty insurance because its basic goal is risk elimination.

2. This statement establishes statutory accounting principles for title insurance and addresses areas where title insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement, title insurance accounting shall comply with codified guidance for other lines of property and casualty insurance.

SUMMARY CONCLUSION

General

3. Title insurers perform many services in connection with the transfer of real estate; however, their principal function involves insuring, guaranteeing, or indemnifying owners of real property or the holders of liens or encumbrances thereon against loss or damage due to defective titles, liens, or encumbrances or, in most states, the unmarketability of the title.

4. In addition to insuring against defective records or examination of those records, an insurer insures against "non-record defects" such as:
   a. Forgeries;
   b. Fraud;
   c. Confusion of name in change of title;
   d. Incompetence (minors or persons of unsound mind);
   e. Mistakes in public records;
   f. Undisclosed or missing heirs;
   g. Instruments executed under a fabricated or expired power of attorney;
   h. Deeds delivered after death of grantor or grantee or without the consent of the grantor;
   i. Deeds by persons supposedly single but actually married;
   j. Wills not probated;
   k. Liens against property (e.g., mechanics liens and tax liens);
   l. Falsified records.

5. Before a title insurance policy is issued, the title insurer, or its agent, must search and examine public records concerning the ownership, liens, and encumbrances on the subject real estate together with
information relating to persons having an interest in the real property as well as maps and other records to determine that title to the property is insurable, or defects can be overcome.

Premium Revenue and Loss Reserve Recognition

6. A variety of services are generally provided (either by the title insurance underwriter, its agent, or others) in connection with the transfer of title to real estate. Title insurance premiums frequently are determined in the rate making process based on the bundle of services provided, including some or all of title search and examination and closing or escrow fees, referred to as “Gross All-Inclusive” premiums. By statute or custom, certain states exclude title search and examination and closing or escrow fees from the rate-making process for title insurance premiums, referred to as “Gross Risk Rate” premiums. Premiums shall be recorded at the date of policy issuance, on either the Gross All-Inclusive or Gross Risk Rate premium basis, consistent with the rate-making method used. The premium related to a title insurance policy is due upon the effective date of the insurance and is not refundable. The term of a title insurance policy is indefinite because the policyholder is insured for as long as he or his heirs or devisees have an interest in the property.

7. Amounts paid to or retained by agents shall be reported as an expense.

8. A liability shall be established for all known unpaid claims and loss adjustment expenses (known claims reserve), consistent with the reserve section of Appendix A-628 with a corresponding charge to income.

9. Premium revenue shall be deferred to the extent necessary to maintain a Statutory or Unearned Premium Reserve (SPR or UPR) determined in accordance with the reserve section of Appendix A-628.

10. A supplemental reserve shall be established consisting of any other reserves necessary which, when taken in combination with the reserves required by paragraphs 8 and 9 of this statement, will be sufficient to cover the company’s liabilities with respect to all known claims, IBNR claims, and loss adjustment expenses. The total of the known claims reserve, SPR/UPR, and the supplemental reserve shall not be less than the actuarially determined liability for the sum of known claims, IBNR claims, and loss adjustment expenses or the amount determined in accordance with the reserve section of Appendix A-628.

11. The actuarially determined liability for the sum of known claims reserve required in paragraph 8 and the IBNR claims and loss adjustment expenses required in paragraph 10 of this statement, shall be determined consistently with the guidance detailed in SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses and consistent with paragraph 13 of this statement.

12. Assets acquired in settlement of claims (e.g., mortgages and real estate) shall be accounted for consistent with the guidance related to the asset acquired. For example, an impaired loan shall be accounted for in accordance with SSAP No. 37—Mortgage Loans, and real estate acquired in foreclosure shall be accounted for in accordance with SSAP No. 40—Real Estate Investments.

Salvage and Subrogation

13. Salvage and subrogation shall be reflected as follows:

   a. Paid losses shall be reported net of realized, but not anticipated, salvage and subrogation. Case basis loss and loss adjustment expense reserves shall not be reduced for anticipated salvage and subrogation, nor shall an asset be established;
b. Paid salvage and subrogation is not realized until a salvage asset or an actual payment pursuant to a subrogation right is in the direct control of the insurer and admissible as an asset for statutory reporting purposes in its own right;

c. Salvage assets and payments pursuant to a subrogation right shall be recorded at current market value. Current market value of real estate shall be established through an appraisal conducted by a qualified independent appraiser;

d. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount less than the value at which it was originally placed on the books of the insurer, then the loss on disposition shall be treated as a decrease in paid salvage (same effect as an addition to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation will be treated as a loss on disposition or change in value of an asset, and shall not be deducted from the salvage on the corresponding claim;

e. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount greater than the value at which it was originally placed on the books of the insurer, then the gain on disposition shall be treated as an increase in paid salvage (same effect as a deduction to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation shall be treated as a gain on disposition or change in value of an asset, and shall not be added to the salvage on the corresponding claim;

f. In completing Schedule P and Part 3B, IBNR reserves may make an actuarially determined provision for the expected value of future salvage and subrogation on open claims and IBNR claims.

Reinsurance

14. Although by their nature, title claims relate to errors or omissions that occurred prior to the inception of the reinsurance agreement, title reinsurance contracts shall be accounted for as prospective reinsurance agreements if they meet all of the other criteria established in SSAP No. 62—Property and Casualty Reinsurance.

Allocation of Expenses

15. This statement establishes uniform allocation rules to classify title insurance expenses within prescribed principal groupings. It is necessary to allocate those expenses which may contain characteristics of more than one classification, which this statement will refer to as allocable expenses.

16. Allocable expenses for title insurance companies shall be classified into the following categories on the expense section of the Operations and Investment Exhibit of the annual statement.

a. Title and Escrow Operating Expenses—Title and escrow operating expenses consist of all expenses incurred in relation to engaging in the business of title insurance, including costs associated with the following: (i) issuing or offering to issue a title insurance policy, (ii) soliciting or negotiating the issuance of a title insurance policy, (iii) guaranteeing, warranting or otherwise insuring the correctness of title searches affecting title to real property, (iv) handling of escrows, settlements or closings, (v) executing title insurance policies, effecting contracts of reinsurance, and abstracting, searching or examining titles. Also included are specifically identifiable and allocated expenses relating to the following activities: (i) supervision and training of employees and agents, (ii) operating costs for branch offices or agencies, (iii) underwriting activities, (iv) receiving and paying of
premians and commissions, (v) maintaining general and detailed records, (vi) data processing, advertising, and publicity, clerical, secretarial, office maintenance, supervisory, and executive duties, (vii) postage and delivery, and (viii) all other functions reasonably associated with the business of title insurance. Title and escrow operating expenses do not include losses, loss adjustment expenses (allocated or unallocated), expense of other operations, or investment expenses. The expenses include only amounts incurred directly by the insurer, and do not include expenses incurred by any agents (regardless of ownership interest).

b. Title and Escrow Operating Expenses are further broken down in the annual statement by the distribution network that gives rise to the expense incurrence. Accordingly, expenses are specifically identified or allocated (in accordance with reasonable allocation procedures consistently applied) to either Direct Operations, Non-affiliated Agency Operations, or Affiliated Agency Operations.

c. Unallocated Loss Adjustment Expenses (ULAE)—ULAE are those indirect costs incurred by a title insurer, typically internal to the company, which are necessary to process claims or manage the claims settlement function and which are not incurred on a claim-specific basis. ULAE shall include all costs of outside parties involved in claims adjusting services, but shall not include any costs incurred by agents in settlement of title or other claims.

d. Investment Expenses—Investment expenses are those expenses incurred in the investing of funds and the pursuit of investment income, including specifically identifiable and allocated expenses related to such activities as: (1) initiating or handling orders and recommendations for investments, (2) research, pricing, appraising, and valuing, (3) disbursing funds and collecting income, (4) safekeeping of securities and valuable papers, (5) maintaining general and detailed records, (6) data processing, (7) general clerical, secretarial, office maintenance, supervisory, and executive duties, (8) supplies, postage, and the like, and (9) all other functions reasonably attributable to the investment of funds. Real estate expenses and real estate taxes are attributable to the Investment Expenses group.

e. Other Operations—The amounts shown for this category represent the allocable expenses incurred by the company in operations other than title and escrow, unallocated loss adjustment, or investment activities.

17. Allocation to the above categories should be based on a method that yields the most accurate results. Specific identification of an expense with an activity that is represented by one of the categories above will generally be the most accurate method. Where specific identification is not feasible, allocation of expenses should be based upon pertinent factors or ratios such as studies of employee activities, salary ratios, or similar analyses.

18. Many companies operate within a group where personnel and facilities are shared. Shared expenses, including expenses under the terms of a management contract, shall be apportioned to the companies incurring the expense as if the expense had been paid solely by the incurring company. The apportionment shall be completed based upon specific identification to the company incurring the expense. Where specific identification is not feasible, apportionment shall be based upon pertinent factors or ratios. Any basis adopted to apportion expenses shall be that which yields the most accurate results and may result from special studies of employee activities, salary ratios, premium ratios or similar analyses. Expenses that relate solely to the operations of an insurance company, such as personnel costs associated with the adjusting and paying of claims, must be borne solely by the insurance company and
are not to be apportioned to other companies within a group. Pertinent factors in making this determination shall include which entity has the ultimate obligation to pay the expense. Apportioned expenses are subject to presentation and allocation as provided in paragraphs 16 and 17.

Title Plant

19. Title plants are an integrated and indexed collection of title records consisting of documents, maps, surveys, or entries affecting title to real property or any interest in or encumbrance on the property, which have been filed or recorded in the jurisdiction for which the title plant is established or maintained. They are tangible assets unique to the title insurance industry, and are the principal productive asset used to generate title insurance revenue and to mitigate the risk of claims. Title plant shall be reported as an admitted asset, subject to the following valuation restrictions:

   a. Costs incurred to construct a title plant, including the costs incurred to obtain, organize, and summarize historical information in an efficient and useful manner, shall be capitalized until the title plant can be used by the company to conduct title searches and issue title insurance policies. The capitalized costs shall be directly related to, and properly identified with, the activities necessary to construct the title plant;

   b. Purchased title plants, including a purchased undivided interest in a title plant, shall be recorded at cost at the date of acquisition. For a title plant acquired separately, cost shall be measured by the fair market value of the consideration given. For title plant acquired as part of a group of assets, cost shall be measured by the fair value of the consideration given and then cost shall be allocated to the title plant based on its fair value in relation to the total fair value of the group of assets acquired. For title plants acquired as part of a purchase of assets or in a business combination, cost shall be determined in accordance with SSAP No. 68—Business Combinations and Goodwill;

   c. A backplant, i.e., a title plant that antedates the period of time covered by the existing title plant may be purchased or constructed. Costs to construct a backplant must be properly identifiable to qualify for capitalization;

   d. Costs incurred after a title plant is operational to (i) convert the information from one storage and retrieval system to another, or (ii) modify or modernize the storage and retrieval system shall not be capitalized;

   e. Costs incurred to maintain a title plant shall be expensed as incurred;

   f. Costs incurred to perform title searches shall be expensed as incurred;

   g. The aggregate carrying value of an investment in a title plant or plants which exceeds the lesser of twenty percent (20%) of admitted assets or forty percent (40%) of surplus to policyholders, as shown on the most recent statement on file with the domiciliary commissioner, at the date of investment shall be nonadmitted.

20. Certain circumstances may indicate that the value of the title plant may be impaired and, thus, the carrying value of the asset may not be recoverable. If there is an indication of possible impairment of value, the title plant shall be evaluated for impairment and recorded in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets. The following are examples of circumstances that may indicate impairment:

   a. Effects of obsolescence, demand, and other economic factors;
b. A significant change in legal requirements or statutory practices in the jurisdiction for which the title plant is established and maintained;

c. A current period operating or cash flow loss combined with a history of such losses or projections that indicate continued losses associated with the revenue produced by the title plant;

d. Failure to maintain the title plant on a current basis and/or lack of appropriate maintenance to keep the title plant up to date; or,

e. Abandonment of a title plant.

21. A properly maintained title plant has an indeterminate life and does not diminish in value with the passage of time, and accordingly, shall not be depreciated.

22. A title insurer may (a) sell its title plant and relinquish all rights to its future use, (b) sell an undivided ownership interest in its title plant, or (c) sell a copy of its title plant or the right to use it. Accounting and presentation for each type of sale noted shall be as follows:

   a. When a title insurer sells its title plant and relinquishes all rights to its future use, consideration received shall be presented as a separate component of revenue net of the carrying value of the title plant sold;

   b. When a title insurer sells an undivided ownership interest in its title plant, consideration received shall be presented as a separate component of revenue net of the pro rata portion of the carrying value of the title plant;

   c. When a title insurer sells a copy of its title plant or the right to use it, consideration received shall be presented as a separate component of revenue and the carrying value of the title plant shall not be reduced.

Disclosures

23. The financial statements shall disclose the following for each period presented:

   a. The amount of premium revenue reported on the Gross All-Inclusive and on the Gross Risk Rate premium basis;

   b. The amount of the known claims reserve, SPR/UPR, and the supplemental reserve;

   c. Whether the insurer uses discounting in the calculation of its supplemental reserve, the method and rate used to determine the discount, and the amount of such discount.

24. Any material individual component of the reported expense categories shall be presented either on the face of the Summary of Operations or within the footnotes or related exhibits to the financial statements.

25. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

26. This statement rejects FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises (FAS 60); however, it is considered appropriate to use the factors to be considered in the
determination of the ultimate cost of settling claims included in FAS 60 when establishing the reserves in accordance with paragraphs 8 and 10 of this statement.

27. This statement adopts FASB Statement No. 61, Accounting for Title Plant, with modification for carrying value restrictions. Restrictions on the total carrying value of an investment in a title plant or plants are determined by paragraph 19 g.

Effective Date and Transition

28. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

29. Additions to the SPR or UPR as a result of the provisions of paragraph 17 v. of Appendix A-628 shall be phased in pursuant to the provisions of paragraph 17 vi. of Appendix A-628.

Mortgage Guaranty Insurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for mortgage guaranty insurance, and addresses areas where mortgage guaranty insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement and Appendix A-630, mortgage guaranty insurance accounting shall comply with codified guidance for other lines of property and casualty insurance.

2. Mortgage guaranty insurance protects a lender against loss of all or a portion of the principal amount of a mortgage loan upon default of the mortgagor. Mortgage guaranty insurance differs from other types of property and casualty insurance in that coverage is long-term, and in most cases premiums are level and paid monthly. Most states require issuers of mortgage guaranty contracts to be monoline insurers and impose limitations on the aggregate amount of risk insured based on geographic territories. Additionally, states may require mortgage guaranty insurers to reinsure with only selected reinsurers.

SUMMARY CONCLUSION

General

3. Mortgage guaranty insurance is provided on residential loans (one to four family residences, including condominiums and townhouses). Coverage can range from as little as 5% on pool insurance to as much as 100% of the outstanding loan amount on individual policies. Most policies cover 10% to 30% of the loan amount and are written on first mortgage loans where the loan amount is a high percentage (generally 80% to 95%) of the value of the mortgaged property.

4. Lenders obtain mortgage guaranty insurance to facilitate sales of mortgage loans in secondary markets. It also enables lenders to make a greater number of high ratio (above 80%) loans and allows them to diversify their portfolio of loans.

5. Mortgage guaranty insurers market directly to mortgage lenders. Individual mortgage loans or pools of mortgage loans are insured under individual insurance certificates or policies; each loan, however, is separately underwritten.

6. Mortgage guaranty insurance companies generally offer the following premium payment plans: (a) monthly premiums, (b) a single premium which provides coverage for periods ranging from three to 15 years, (c) nonlevel annual premiums, and (d) level annual premiums. All policies are renewable at the discretion of the lender. The mortgage guaranty insurer does not have an option to cancel or nonrenew the policy, except for fraud or nonpayment of the premium.

7. Premiums are based upon, (a) the percentage of insurance coverage provided, (b) the ratio of the insured mortgage loan to the property value or sales price, and (c) the term and/or premium payment method selected by the lender. Premiums are quoted as a percentage of the total mortgage loan insured and increase as insurance coverage and loan-to-value ratio increases.

8. If a default occurs, the mortgage guaranty insurer generally requires the lender to foreclose and tender merchantable title to the mortgaged property in order to make a claim. The insurer may then, at its option, (a) purchase the property for the lender's cost (generally the entire remaining principal loan balance plus accumulated interest and allowable expenses), (b) pay the percentage of the lender's cost specified by the policy, or (c) arrange for the lender to sell the property and reimburse the lender for any loss up to an agreed amount. Under settlement option (a), the insurer intends to resell the property with the expectation of reducing the amount of loss which would have resulted if option (b) had been elected.
Insured Risk

9. The nature of the insured risk is influenced by certain factors which set mortgage guaranty insurance apart from other types of insurance. These factors are addressed in paragraphs 10 through 12.

Exposure Period

10. The exposure period is significantly longer for mortgage insurance than for most other property and casualty insurance products. The exposure period can run for the term of the mortgage; however, the average policy life is seven years. The policy is terminated when the mortgage obligation is satisfied or the lender elects to cancel or not renew the policy. In contrast to mortgage guaranty insurance, most property and casualty products need not be renewed by the insurer at the expiration of the policy. Mortgage insurance is renewable at the option of the insured at the renewal rate quoted when the policy commitment was issued.

Losses

11. Losses are affected by the following factors specific to mortgage guaranty insurance:

a. The insured peril—the default of a borrower arises from the credit risk associated with mortgage loans. The frequency of loss is strongly influenced by economic conditions. The likelihood of individual default is further increased if the property has deteriorated since a borrower in financial difficulty will be less able to sell the property at a price sufficient to discharge the mortgage;

b. Mortgage insurance losses can be divided into three categories:

i. Normal losses associated with regular business cycles, interruptions in the borrower’s earning power, and errors made in evaluating the borrower’s willingness or ability to meet mortgage obligations;

ii. Defaults caused by adverse local economic conditions;

iii. Widespread defaults caused by a severe depression in the U.S. economy.

Loss Incidence

12. Losses are incurred over the exposure period which runs for the term of the mortgage. However, loss incidence peaks in the earlier years. When a loan has been delinquent two to four months, the policy requires the lender to notify the insurer. The lender generally agrees to institute foreclosure proceedings six to nine months from the date of delinquency. Foreclosure can require an additional 18 months which means a considerable delay between the delinquency and the presentation of the claim. Without adverse economic conditions, most delinquencies do not result in a loss payment. Once a claim is presented, payment normally is made within one or two months and ultimate loss costs can be known relatively quickly.

Pool Insurance

13. Mortgage guaranty insurance may be provided on pools of mortgage loans. Typically, pool insurance supports mortgage-backed securities or group sales. Unlike other pool or group products, each loan is individually underwritten.
14. Pool insurance may be provided on loans that are already insured by primary insurance, in which case the pool insurance provides an additional level of coverage, or it may be provided on loans without primary insurance (usually loans with loan-to-value ratios below 80%). Generally, pool insurance provides 100% coverage and includes a stop-loss limit of liability which may range from 5% to 20% of the initial aggregate principal balance. Because of regulatory requirements in some states, pool insurance usually uses participating reinsurance arrangements to limit the exposure of any one mortgage insurer of a pool of loans to 25% of each mortgage insured.

15. Pool insurance policies are not cancelable by the insurer except for nonpayment of premium. These policies may be written on mortgage pools having terms of up to 30 years. However, the average policy life is 8 to 12 years.

16. Upon default, the insurer has the same options as with individual insured mortgage loans. However, pool insurance loss payments are reduced by settlements under primary insurance and subject to the stop-loss limit.

17. Three kinds of mortgage-backed securities which use pool insurance are:
   a. Mortgage-backed bonds—Issued by banks, savings and loan associations and other mortgage lenders as a general obligation of the issuing institution. These bonds are collateralized by a pool of mortgages, and have a stated rate of return and maturity date;
   b. Mortgage revenue bonds—Issued by state and local housing authorities to support housing affordability for targeted income groups;
   c. Mortgage pass-through certificates—Issued by banks, savings and loan associations, mortgage bankers, and others providing an undivided interest in a pool of mortgages with principal and interest payment passed to the certificate holder as received.

Premium Revenue Recognition

18. Written premium shall be recorded in accordance with SSAP No. 53—Property Casualty Contracts—Premiums. Premium revenue shall be earned as follows:
   a. For monthly premium plans, revenues shall be earned in the month to which they relate;
   b. For annual premium plans, revenues shall be earned on a pro rata basis over the applicable year;
   c. For single premium plans, revenues shall be earned over the policy life in relation to the expiration of risk;
   d. Additional first year premiums or initial renewal premiums on nonlevel policies shall be deferred and amortized to income over the anticipated premium paying period of the policy in relation to the expiration of risk.

Unpaid Losses and Loss Adjustment Expense Recognition

19. Unpaid losses and loss adjustment expenses shall be recognized in accordance with SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses (SSAP No. 55). For mortgage guaranty insurance contracts, the default shall be considered the incident that gives rise to a claim as discussed in SSAP No. 55. If a claim is ultimately presented, the date of default shall be considered the loss incurred date.
SSAP No. 58  Statement of Statutory Accounting Principles

20. The process for estimating the liability shall include projections for losses that have been reported as well as those that have been incurred but not reported. The estimates shall be made based on historical data, trends, economic factors, and other statistical information including paid claims, reported losses, insurance in force statistics, and risk statistics.

21. Real estate and mortgages are acquired by mortgage guaranty insurers to mitigate losses. These assets shall be shown on the balance sheet at the lower of cost or net realizable value, net of encumbrances. Gains or losses from the holding or disposition of these assets shall be recorded as a component of losses incurred. Rental income or holding expenses shall be included in loss adjustment expenses.

Contingency Reserve

22. In addition to the unearned premium reserve, mortgage guaranty insurers shall maintain a liability referred to as a statutory contingency reserve. The purpose of this reserve is to protect policyholders against loss during periods of extreme economic contraction. The annual addition to the liability shall equal 50% of the earned premium from mortgage guaranty insurance contracts and shall be maintained for ten years regardless of the coverage period for which premiums were paid. With commissioner approval, when required by statute, the contingency reserve may be released in any year in which actual incurred losses exceed 35% of the corresponding earned premiums. Any such reductions shall be made on a first-in, first-out basis. Changes in the reserve shall be recorded directly to unassigned funds (surplus).

Premium Deficiency Reserve

23. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, contingency reserve, and the estimated future renewal premium on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency with a corresponding charge to operations. Commissions and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have been expensed. If an insurer utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

U.S. Mortgage Guaranty Tax and Loss Bonds

24. To obtain a current federal income tax benefit derived from annual additions to the statutory contingency reserve (for tax purposes, the mortgage guaranty account), mortgage guaranty insurers must purchase tax and loss bonds to the extent of the tax benefits. These bonds are noninterest bearing obligations of the U.S. Treasury, and mature 10 years after issue. The usual purpose of tax and loss bonds is to satisfy taxes that will be due in 10 years when the tax benefit is reversed; however, the bonds may be redeemed earlier in the event of excess underwriting losses. These bonds are reported as admitted assets allowing mortgage insurers to conserve capital. In accordance with SSAP No. 10—Income Taxes, temporary differences (as defined in that statement) do not include amounts attributable to the statutory contingency reserve to the extent that “tax and loss” bonds have been purchased.

Contingency Reserve (for Tax Purposes, the Mortgage Guaranty Account)

25. Under IRS Code Section 832(e), mortgage guaranty insurers are permitted to deduct the annual addition to the contingency reserve from gross income. The tax deduction is generally an amount equal to (a) 50% of earned premium, or (b) taxable income as computed prior to this special deduction if less than 50% of earned premium. Annual deductions not utilized for tax purposes during the current period may be carried forward for eight years on a basis similar to net operating losses. The amount deducted
must be restored to gross income after ten years; however, it may be restored to gross income at an earlier date in the event of a taxable net operating loss.

26. The tax deduction is permitted only if special U.S. Mortgage Guaranty Tax and Loss Bonds are purchased in an amount equal to the tax benefit derived from the deduction. Upon redemption the tax and loss bonds can be used to satisfy the additional tax liability that arises when the deduction is restored to income.

Disclosures

27. Mortgage guaranty insurers shall make all disclosures required by other statements within the codification, including but not limited to the requirements of SSAP No. 55, and SSAP No. 1—Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures.

28. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

29. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Credit Life and Accident and Health Insurance Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for income recognition and policy reserves for all contracts classified as credit life and credit accident and health contracts defined in SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force.

SUMMARY CONCLUSION

Definitions

2. Credit life and accident and health insurance contracts will be referred to collectively as "credit insurance" for purposes of this statement. Credit insurance is generally issued in connection with the issuance of credit to an individual by a bank, retailer, finance company, or other similar organization. This type of insurance most often protects the creditor to the extent of the unpaid balance of the loan. Contracts sold in connection with loans or other credit transactions, not exceeding a stated duration shall be reported as credit insurance. Mortgage guaranty insurance is addressed in SSAP No. 58—Mortgage Guaranty Insurance. Credit policies are generally limited to issues of 120 months or less in most states. Credit insurance is sold as either an individual or group policy and may provide for single or joint life coverage.

3. Credit life insurance, generally in the form of decreasing term insurance, is issued on the lives of debtors to cover payment of loan balances in case of death. Credit accident and health insurance is insurance on a debtor to either provide indemnity for payments becoming due on a specific loan or other credit transaction while the debtor is disabled.

4. Premiums for credit insurance contracts shall be defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract.

Income Recognition

5. Consistent with SSAP No. 51—Life Contracts, premiums shall be recognized in the summary of operations as income on the gross basis (amount charged to the policyholder) when due from policyholders under the terms of the insurance contract.

Policy Reserves

6. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the insurance contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. The statutory policy reserves for credit life contracts are generally calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. The statutory policy reserves for credit accident and health contracts generally consist of an unearned premium reserve, and other reserves, as required, as further discussed in paragraphs 12 and 13. Statutory policy reserves meet the definition of liabilities as defined in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5). The actuarial methodologies referred to in the following paragraph meet the criteria required for reasonable estimates in SSAP No. 5.

7. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822, and the actuarial guidelines found in Part 9 of the NAIC
Financial Examiners Handbook. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

8. Policy reserves are established through either a gross unearned premium reserve or a mortality/morbidity reserve. The gross unearned premium reserve represents the estimated amount of premium for insurance coverage that has not yet expired. The mortality/morbidity reserve represents the estimated amount of future anticipated benefits, discounted at valuation interest and mortality/morbidity, to be incurred on policies in force.

9. When the level of insurance risk is constant during the contract period, policy reserves shall be recognized over the period of risk using either the daily pro-rata or monthly pro-rata methods as described in SSAP No. 53—Property Casualty Contracts—Premiums. Policy reserves for contracts where the level of insurance risk is not constant throughout the contract period shall be recognized over the period of risk in proportion to the amount of insurance protection provided. Various methods may be used to accomplish this as described below. The reporting entity shall select the method that most closely reflects the pattern of insurance protection provided. To the extent that these methods do not reflect the pattern of insurance protection provided, the reporting entity shall modify, or develop, if necessary, a method that recognizes net income from the policy over the exposure period of the contract in proportion to the amount of insurance protection provided.

10. Single premium credit life policy reserves shall be based on either a gross unearned premium reserve based on a refund formula, or a reserve based on assumed risks using mortality factors. In practice, various methods exist and are currently used to estimate the amount of gross unearned premiums applicable to the unexpired portion of the policies in force. For decreasing gross coverage, the gross unearned premium may be estimated using a Rule of 78’s method; for decreasing net payoff coverage, either the Rule of 78’s or the single premium method is used; and for level coverage, the pro rata method is generally used. The reporting entity shall select a method that reflects the pattern of insurance protection provided.

11. Policy reserves for credit A&H policies shall be based on a gross unearned premium reserve using either the pro rata, Rule of 78’s, or actuarial methods. The actuarial reserve is the single premium for the debt’s remaining term and amount. Most states require reporting entities to record a gross unearned premium reserve using the Rule of 78’s method. In practice, a mean gross unearned premium reserve (average of the Rule of 78’s and the pro rata methods) is often recorded. The reporting entity shall select a method that reflects the pattern of insurance protection provided.

12. For credit accident and health contracts, the policy reserve recorded shall not be less than the gross unearned premium reserve. In addition, for all credit contracts in the aggregate, if the premium refund liability exceeds the aggregate recorded reserve, an additional liability shall be established. This premium refund (excess) liability may include consideration of commission, premium tax, and other expenses recoverable.

13. When the anticipated benefits, expected dividends to policyholders and maintenance cost exceed the recorded policy reserve, a premium deficiency reserve shall be recognized by recording an additional liability for the excess deficiency with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis since they have previously been expensed.

14. The difference between the policy reserves at the beginning and end of the reporting period shall be reflected as the change in reserves or change in unearned premium, as appropriate, in the summary of operations, except for any difference due to a change in valuation basis as discussed in paragraph 15.
Change In Valuation Basis

15. A change in valuation basis shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3). Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the Summary of Operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a new method and a specific transition that allows for grading.

Disclosures

16. For life reserves the financial statements shall disclose the following:
   a. A description of reserve practices concerning the following:
      i. Waiver of deduction of deferred fractional premiums upon death of insured;
      ii. Return of portion of final premium for periods beyond the date of death;
   b. The methods employed in the valuation of substandard policies;
   c. The amount of insurance, if any, for which the gross premiums are less than the net premiums according to the valuation standards;
   d. The method used to determine tabular interest, tabular less actual reserves released, and tabular cost (by formula or from the basic data for such items);
   e. The nature of significant other reserve changes.

17. If the company has reported life insurance premiums deferred and uncollected on policies in force as of the financial statement date, disclose separately the amounts and the loading excluded for credit life business.

18. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:
   a. Name and address of managing general agent or third party administrator;
   b. Federal Employer Identification Number;
   c. Whether such person holds an exclusive contract;
   d. Types of business written;
   e. Type of authority granted (i.e., underwriting, claims payment, etc.);
   f. Total premium written.
19. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

20. This statement incorporates the requirements of Appendices A-225, A-812, A-820 and A-822, and the Actuarial Standards Board *Actuarial Standards of Practice*.

21. This statement rejects *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* relating to accounting and reporting for credit life and accident and health insurance contracts.

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. Contracts issued prior to January 1, 2001 shall be accounted for based on the laws and regulations of the domiciliary state. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for financial guaranty insurance and addresses areas where financial guaranty insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement, financial guaranty insurance accounting shall comply with codified guidance for other lines of property and casualty insurance.

SUMMARY CONCLUSION

2. Financial guaranty insurance provides protection against financial loss as a result of default, changes in interest rate levels, differentials in interest rate levels between markets or products, fluctuations in exchange rates between currencies, inconvertibility of one currency into another, inability to withdraw funds held in a foreign country resulting from restrictions imposed by a governmental body, changes in the value of specific assets or commodities, financial or commodity indices, or price levels in general. Financial guaranty insurance does not provide protection from losses which occur due to fortuitous physical events, failure or deficiency in the operation of equipment, or the inability to extract natural resources. Additionally, it does not provide coverage from losses related to various types of bonds (e.g., individual or schedule public official bond; a contract bond; a court bond), credit insurance, guaranteed investment contracts, and residual value insurance.

Premium Revenue Recognition

3. Written premium shall be recorded in accordance with SSAP No. 53—Property Casualty Contracts—Premiums.

4. When premiums are paid on the installment basis, premium revenue shall be recognized in the statement of operations using the monthly pro-rata method. Premiums not paid on the installment basis shall be recognized in the statement of operations in proportion with the amount and expected coverage period of the insured risk.

5. When the anticipated losses, loss adjustment expenses, and maintenance cost exceed the recorded unearned premium reserve and contingency reserve, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis since they have previously been expensed. If a reporting entity utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

Unpaid Losses and Loss Adjustment Expense Recognition

6. Unpaid losses and loss adjustment expenses shall be recognized in accordance with SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses (SSAP No. 55). Each financial guaranty insurer shall establish and maintain reserves for unpaid losses and loss adjustment expenses. The initial date of default shall be considered the incident which gives rise to a claim. Loss reserves shall include a reserve for claims reported and unpaid net of collateral.

7. A deduction from loss reserves shall be allowed for the time value of money by application of a discount rate equal to the average rate of return on the admitted assets of the financial guaranty insurer as of the date of the computation of the reserve. The discount rate shall be adjusted at the end of each calendar year. In addition, a reserve component for incurred but not reported claims shall be reasonably
estimated, if deemed necessary by the financial guaranty insurer or required by the commissioner following an examination or actuarial analysis.

Contingency Reserve

8. In addition to the unearned premium reserve and the liability established for unpaid losses and loss adjustment expenses, financial guaranty insurers shall maintain a liability referred to as a statutory contingency reserve. The purpose of this reserve is to protect policyholders against loss during periods of extreme economic contraction.

9. The contingency reserve shall be the greater of fifty percent of premiums written for each category or the amount provided by applying the following percentages to the principal guaranteed in each calendar year. The premiums written shall be net of reinsurance if the reinsurer has established a contingency reserve.

10. Additions to the reserve for items a. through e. in paragraph 9, equal to one-eightieth of the amounts derived by applying the appropriate contribution specified above, shall be made each quarter for a period of twenty (20) years. Additions to the reserve for items f. through j. in paragraph 9 above, equal to one-sixtieth of the amounts derived by applying the appropriate contribution specified above, shall be made each quarter for a period of fifteen (15) years.

11. For contingency reserves required to be maintained for 20 years, contributions may be discontinued if the total reserve established for all categories in subparagraphs 9 a. through 9 e. exceeds the sum of the percentages contained therein multiplied by the unpaid principal guaranteed. For contingency reserves required to be maintained for 15 years, contributions may be discontinued if the total reserve established for all categories in subparagraphs 9 f. through 9 j. exceeds the sum of the percentages contained therein multiplied by the unpaid principal guaranteed.

12. The contingency reserve may also be released in the following circumstances:

a. For contingency reserves required to be maintained for 20 years:
   i. In any year in which actual incurred losses exceed 35% of the corresponding earned premiums, with commissioner approval;
   ii. If the reserve has been in existence less than 40 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer’s financial guarantees, with commissioner approval;
iii. If the reserve has been in existence more than 40 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, upon 30 days prior written notice to the commissioner.

b. For contingency reserves required to be maintained for 15 years:

i. In any year in which actual incurred losses exceed 65% of the corresponding earned premiums, with commissioner approval;

ii. If the reserve has been in existence less than 30 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, with commissioner approval;

iii. If the reserve has been in existence more than 30 quarters, upon demonstration that the amount is excessive in relation to the outstanding obligations under the insurer's financial guarantees, upon 30 days prior written notice to the commissioner.

Any reductions shall be made on a first-in first-out basis. Changes in the reserve shall be recorded through unassigned funds (surplus).

Disclosures

13. Financial guaranty insurers shall make all disclosures required by other statements within the codification, including but not limited to the requirements of SSAP No. 55 and SSAP No. 1—Disclosure of Accounting Policies, Risks & Uncertainties, and Other Disclosures.

14. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

15. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Generally Accepted Accounting Principles

RELEVANT ISSUE PAPERS
Life, Deposit-Type and Accident and Health Reinsurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for life, deposit-type and accident and health reinsurance. This statement applies to life, deposit-type and accident and health contracts as defined in SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force (SSAP No. 50).

SUMMARY CONCLUSION

Indemnity Reinsurance

2. Reinsurance is an agreement by which a reporting entity transfers all or part of its risk under a contract to another reporting entity. The entity that issued the policy is called the primary insurer, direct writer, or ceding entity and the entity to which the risk is transferred is called the reinsurer or assuming entity. The process of transferring the risk from the ceding entity to the reinsurer is known as a cession. If an assuming entity, in turn, transfers a portion of this risk, the process is called a retrocession. A retrocession is customarily made when the amount assumed is beyond the reinsurer’s limits of retention.

3. There is no direct relationship between the reinsurer or the retrocessionaire and the ceding entity’s policyholder unless there is a “cut-through endorsement.” In the event of the ceding entity’s insolvency, except in the case of a “cut-through endorsement,” the policyholder or beneficiary under a contract that is reinsured has the same status as a policyholder or beneficiary of a policy that was not reinsured. An entity may not need to be licensed, have accredited reinsurer status or other means of authorization in a state in order to act as a reinsurer of a domestic entity. However, the domestic entity is not permitted to take reserve credits on the business ceded to any unauthorized reinsurers to the extent that they are not properly securitized by means of a trust, letter of credit or funds withheld or other acceptable forms of collateral.

4. Fronting arrangements, pools and association business are often accomplished using reinsurance contracts. The guidance included in this statement also applies to these types of contracts except as specifically exempted.

Retention

5. In formulating its rules for accepting applications for insurance, an entity must decide upon three areas of action—retaining, reinsuring, or declining the risks presented. Entities of various sizes have different desired capacities to write insurance on a single life and/or entire blocks of business or portfolios. An entity determines the amount of risk exposure it is able to accept and retain as its own insurance business. Having made this determination, the entity then decides what to do with any risks presented that exceed the maximum amount it is willing to retain. It has two choices—accept the additional risk and reinsure it, or decline the extra risk.

6. Business to be written is expected to be profitable, so the direct writing entity will generally want to retain as much of the risk as possible, consistent with its overall objectives. The entity also will want to avoid exposure to large losses that could jeopardize its financial condition and the policy values of its policyholders. Consequently, a common practice in the life insurance industry is for a reporting entity to establish a schedule for maximum amounts of insurance, called retention limits, which it will retain at its own risk on individual lives in various categories of insurance. By adopting a suitably chosen schedule of retention, the reporting entity eliminates exposure to large losses and reduces fluctuations in the cost of death claims from year to year, which could adversely affect the reporting entity’s surplus position.
addition, the reporting entity can utilize aggregate stop loss reinsurance to protect it from aggregate claims exceeding a specific threshold.

7. There are also reasons why a reporting entity might retain less than its defined maximum. One is to transfer from the ceding entity to the reinsurer the part of the surplus strain that results from writing new life insurance. The ceding entity may wish to limit the risk of loss on substandard business. Testing new coverages or new classes of lives may lead to reinsurance.

Reinsurance Arrangements

8. Reinsurance can be on a facultative or an automatic basis. For facultative, each risk is handled separately at the time it is written. When the direct writing entity receives an application for a policy and it wishes to reinsure some or all of the risk, it negotiates with another entity for a transfer of all or a portion of that risk. For purely facultative cessions, the assuming entity is not obligated to assume any of the risk until its offer to reinsure is accepted. For facultative obligatory reinsurance, the assuming entity is obligated to reinsure the risk subject to its having sufficient available capacity.

9. For automatic reinsurance, the ceding entity agrees to reinsure with the reinsurance entity all cases which meet certain defined conditions for amounts as defined in the reinsurance agreement. The reinsurance entity is bound to accept all such amounts, up to a predetermined maximum. Amounts in excess of automatic limits set out in the reinsurance agreement may be handled as facultative cessions. When the amount lies within the automatic maximum limit, called the binding authority, the ceding entity issues its policy upon completion of its underwriting procedures and without securing the prior approval of the reinsurance entity. Notification of automatic reinsurance is sent to the reinsurer within a specified period after the ceding entity issues its policy.

10. By agreeing to accept all business automatically ceded to it, the reinsurer is relying on the underwriting judgment of the ceding entity and is bound to accept the case even when it, the reinsurer, may not agree with the underwriting action. The reinsurer is protected by the requirement that the ceding entity retains at its own risk its defined retention limit for the class of business that is involved and by the maximum which may be ceded automatically.

Types of Reinsurance Arrangements

11. Once an entity has decided to reinsure amounts in excess of its desired retention, it may proceed in one of several basic arrangements—coinsurance, modified coinsurance, yearly renewable term or non-proportional. Such contracts may have funds withheld.

Coinsurance

12. In this arrangement, the risks are reinsured on the same plan as that of the original policy. The direct writer and the reinsurer share in the risk in the same manner. The ceding entity pays the reinsurer a proportional part of the premiums collected from the insured. In return, the reinsurer reimburses the ceding entity for the proportional part of the death or accident and health claim payments and other benefits provided by the policy, including nonforfeiture values, policy dividends, experience rating refunds, commissions, premium taxes, and other direct expenses agreed to in the contract. The reinsurer must also establish the required reserves for the portion of the policy it has assumed. A single policy can be coinsured with more than one entity or under more than one reinsurance contract with the same entity as long as the combined total of reinsurance and the retention of the ceding entity is not more than 100% of the risk.
13. In coinsurance of participating policies, the reinsurer may reimburse the ceding entity for its portion of the dividends paid to the policyholder. In determining its schedule of dividends, the ceding entity takes into account the experience on the business as written. If the reinsurer reimburses dividends it will typically accept the ceding entity's schedule but may require input into the schedule. Changes to the schedule may have to be agreed to by the reinsurer. Coinsurance of all or a portion of a block of business also is used in situations where a severe strain is placed on the direct writing entity's surplus in the first policy year. For example, the premium received by the direct writer during the first policy year usually is insufficient to pay the high first-year commissions and other costs of issue and to establish the initial reserve. In such an example, coinsurance relieves some of the surplus strain of adding large amounts of new insurance.

**Modified coinsurance**

14. The “modified coinsurance” or “modco” arrangement, is a variation of coinsurance. The ceding entity has transferred all or a portion of the net policy liabilities on the reinsured policies to the reinsurer, and the reinsurer is required to indemnify the ceding entity for the same amount. The assets necessary to support the reserves for the original policies are maintained by the ceding entity instead of the reinsurer. This is accomplished by designating in the contract the transfer of the net policy liabilities to the assuming entity and an immediate transfer back to the extent of the modco deposit. Under modified coinsurance, the assuming entity shall transfer to the ceding entity the increase in the reserve on the reinsured portion. This transaction reflects the reinsurer’s risk with respect to the reinsured business and its obligation to maintain the reserves supporting such obligation. In some cases, a policy may be reinsured partially on a coinsurance arrangement and partially on a modified coinsurance arrangement. This may be accomplished through the use of two contracts or in a single contract.

**Yearly renewable term (YRT)**

15. Under this arrangement of reinsurance, the ceding entity transfers the net amount at risk on the portion reinsured to the reinsurer and pays a one-year term premium. The “net amount at risk”—as defined in the contract—is usually the amount of insurance provided by the policy in excess of the ceding entity’s reserve on it.

**Non-proportional**

16. Other forms of reinsurance are also available, such as catastrophe and stop loss coverage. These arrangements provide for financial protection to the ceding entity for aggregate losses rather than providing indemnification for an individual policy basis as described in the preceding three reinsurance arrangements. Catastrophic and stop-loss reinsurance are written on an annual basis to protect the ceding entity from excessive aggregate losses. Usually, the coverage does not extend over the life of the underlying policy nor is there any requirement on the ceding entity to renew the arrangement.

**Transfer of Risk**

17. Reinsurance agreements must transfer risk from the ceding entity to the reinsurer in order to receive the reinsurance accounting treatment discussed in this statement. If the terms of the agreement violate the risk transfer criteria contained herein, (i.e., limits or diminishes the transfer of risk by the ceding entity to the reinsurer), the agreement shall be accounted for as discussed in paragraph 49. In addition, any contractual feature that delays timely reimbursement violates the conditions of reinsurance accounting.

18. This paragraph applies to all life and accident and health reinsurance agreements except for yearly renewable term reinsurance agreements and non-proportional reinsurance agreements such as stop
loss and catastrophe reinsurance. All reinsurance agreements covering insurance products that transfer significant mortality or morbidity risk shall follow the guidance for reinsurance accounting contained in this statement. All reinsurance contracts covering insurance products that do not transfer significant mortality or morbidity risk, or covering deposit-type contracts as defined in SSAP No. 52—Deposit-Type Contracts, shall follow the guidance contained in paragraph 49.

19. Yearly renewable term reinsurance agreements that transfer a proportionate share of mortality or morbidity risk inherent in the business being reinsured and do not contain any of the conditions described in Appendix A-791, paragraphs 2 b., 2 c., 2 d., 2 h., 2 i., 2 j., or 2 k., shall follow the guidance for reinsurance accounting. Contracts that fail to meet the requirements for reinsurance accounting shall follow the guidance contained in paragraph 49.

20. For non-proportional reinsurance agreements such as stop loss and catastrophe reinsurance agreements, contract terms shall be evaluated to assess whether they transfer significant risk to the reinsurer. For example, prepayment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity limits the risk to the reinsurer. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer’s payment to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Reinsurance accounting shall apply to all non-proportional agreements that transfer significant risk and do not contain any provisions that protect the reinsurer from incurring a loss. Contracts that fail to meet the requirements for reinsurance accounting shall follow the guidance contained in paragraph 49.

Accounting and Reporting of Reinsurance

21. The obligation of reporting reinsurance in force and of determining unpaid premiums and incurred claims and other balances is generally on the ceding entity because it knows the current status of the policies it has written directly and reinsured. A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding entity and the transmittal of information and its entry on the books of the assuming entity. The assuming entity shall estimate any material unreported premiums and related costs.

22. The ceding entity must report these items in its balance sheet:
   a. Credits (deductions) to its policy and claim reserves and unpaid claims;
   b. Premiums or other amounts payable on reinsured risks;
   c. Amounts recoverable on claims, surrender values, dividends, experience rating refunds, taxes, commissions, and other expenses;
   d. Modified coinsurance reserves; and
   e. Amounts receivable or payable for funds withheld.

23. Similarly, in its balance sheet, the assuming entity must report:
   a. Reserves for reinsurance assumed reduced by any modified coinsurance reserves;
   b. Reinsurance premiums receivable or other amounts receivable;
Life, Deposit-Type and Accident and Health Reinsurance

SSAP No. 61

Amounts payable for claims, surrender values, dividends, experience rating refunds, taxes, commissions, and other expenses; and

d. Amounts receivable or payable for funds withheld by the ceding entity.

24. While the premiums, commissions, expense allowances, reserves, claims, etc. will result in a net amount, the proper way to report them is in their separate classifications on the balance sheet. Each reinsurance agreement must be accounted for separately.

Reinsurance Premiums

25. For all reinsurance arrangements, the assuming entity must report premiums under the terms of the reinsurance contract as income and establish any asset or liability consistent with the methods and assumptions used to establish its policy reserves and guidance contained in SSAP No. 51—Life Contracts, SSAP No. 54—Individual and Group Accident and Health Contracts, and SSAP No. 59—Credit Life and Accident and Health Insurance Contracts. The ceding entity shall reduce premium income by the amounts paid or payable to the reinsurers. The ceding entity shall reduce its deferred and uncollected premiums reported as an asset by the corresponding proportionate amount of any deferred and uncollected premium attributable to those insurance policies reinsured. When the ceding entity has collected the premium but has not remitted the proportionate share to the reinsurer, the ceding entity shall establish a liability for the amount due the reinsurer. The assuming entity shall record an asset for premiums receivable from the ceding entity.

Reinsurance Benefit Payments

26. Policy benefit payments paid or payable by the reinsurer shall be reported in the summary of operations and reduces the ceding entity’s reported benefit payments. The reinsurer shall establish a liability for its share of any unpaid claim payments and the ceding entity shall reduce any policy and contract claim liability with respect to the reinsured policies or establish a receivable for the amount due from the reinsurer for claims paid.

Expenses

27. It is common for the assuming entity to provide an expense allowance to cover expenses of the ceding entity. The allowance is frequently nonspecific with respect to premium taxes and other general expenses of the ceding entity and it is usually combined with and accounted for as part of the commissions on reinsurance assumed or ceded.

28. Commissions on direct business, commissions and expense allowances on reinsurance assumed, and commissions and expense allowances on reinsurance ceded are each accounted for separately in the summary of operations and on the balance sheet. Accordingly, commissions and expense allowances on reinsurance ceded are reported as income in the summary of operations and the balance sheet provision for due and accrued amounts is reported as an asset.

29. The taxes, commissions, and other expenses that will be paid by the assuming entity to the ceding entity are agreed upon when the reinsurance agreement is negotiated. These items are calculated in accordance with the reinsurance agreement and usually relate to premiums or claims or both. At the statement date, the amount of unpaid expenses is generally based upon the amount of premiums and claims unpaid at that date.

30. Some coinsurance contracts provide that the assuming entity pay to the ceding entity a commission that exceeds the first-year premium. In the absence of any guarantees for payment of future

61-7
premiums, or other similar persistency guarantees, these commissions are accounted for on the cash basis. If, however, the contract contains a persistency guarantee which provides for return of the excess commission, the ceding entity must record the excess commission as a liability. This liability is then released as future premiums are paid to the assuming entity or the persistency guarantee otherwise expires. The rate of release is determined in accordance with the anticipated experience and reasonable commission rate for first-year and renewal premiums. Excess commissions such as these are a means of financing for the ceding entity.

31. If renewal expense allowances in any accounting period are not sufficient to cover anticipated allocable renewal expenses of the ceding entity on the portion of the business reinsured, a liability is to be established by the ceding entity for the present value of the shortfall. In establishing this liability, assumptions are to be used equal to the applicable statutory reserve basis on the business reinsured. Anticipated allocable expenses include commissions, premium taxes and direct expenses including, but not limited to, billing, valuation, claims and maintenance expected by the entity at the time the business is reinsured.

Experience Refunds

32. Some reinsurance contracts, generally proportional reinsurance, provide that the reinsurer will refund an agreed upon portion of its profit to the ceding entity. The reinsurance contract will provide the calculation and the factors to be included.

33. If the contract provides for experience refunds, the ceding entity must record, as an asset, the amount of the refund receivable as of the statement date, but reduced by any amount that is contingent upon future experience. The assuming entity is also required to record, as a liability, the amount of the refund calculated at the statement date, but without regard to any effects that future experience might have.

Credits for Ceded Reinsurance

34. The credit taken by the ceding entity under the coinsurance arrangement is calculated using the same methodology and assumptions used in determining its policy and claim reserves. It is, of course, only for the percentage of the risk that was reinsured. Under modified coinsurance, the reserve credit is reduced by the modco deposit retained by the ceding entity. If the entity reinsures on a yearly renewable term basis, it is itself buying insurance for the portion of the ceded amount at risk. The amount of yearly renewable term reinsurance that is required on a given policy generally decreases each year as the entity’s reserve increases. The net amount at risk may increase, however, on interest sensitive products such as universal life. The amount at risk on accident and health yearly renewal term reinsurance will remain level and the reinsurance premium will increase each year.

35. The reserve credit taken by the ceding entity is reported as a reduction to the reserves and not as an asset of the entity. The ceding entity’s reserve credit and assuming entity’s reserve for yearly renewable term reinsurance shall be computed as the one year term mean reserve on the amount of insurance ceded. The ceding entity must use the same mortality and interest bases which were used for valuing the original policy before reinsurance. The credit may also be computed on a pro rata basis if the result is not materially different from the credit computed on the mean reserve basis. For all types of reinsurance, the ceding entity also takes credit for other amounts due from the reinsurer such as unpaid claims and claims incurred but not reported. If contemplated by the reinsurance contract, recognition of related assets and liabilities must occur (policy loans, due and deferred premiums, etc.).

36. Non-proportional reinsurance is entered into on an annual basis to limit the claims experience of the ceding entity and thereby protect its financial integrity. When the period of the arrangement exceeds...
one year, the contract must be carefully reviewed to determine if the end result more closely follows proportional reinsurance. No reserve credit is taken for non-proportional reinsurance unless the aggregate attachment point has in fact been penetrated. In order for an entity to reflect reserve credits on a prospective basis, the entity will need to demonstrate that the present value of expected recoveries using realistic assumptions, to be realized from the reinsurer are in excess of the present value of the reinsurance premiums guaranteed to be paid by the ceding entity under the terms of the contract. Because non-proportional reinsurance aggregates experience, and does not indemnify the ceding entity for each policy loss, the use of statutory assumptions underlying the insured policies is inappropriate for determining any reserve credit to be taken by the ceding entity. Historical experience, pricing assumptions and asset shares shall be considered in determining if the reinsurer may be reasonably expected to pay any claims. The reserve credit taken shall only reflect these reasonable expectations. This treatment of non-proportional reinsurance is similar to the way property and casualty (P&C) reinsurance is considered. This is because these modes of reinsurance more closely follow P&C indemnification principles than life insurance formula basis, and because these coverages are very similar to excess insurance on P&C products. In determining the appropriate reserve credit, the probability of a loss penetrating to the reinsurer’s level of coverage (using reasonable assumptions) must be multiplied by the expected amount of recovery. This is the same as reserve credits on coinsurance where the probability of a claim (i.e., mortality) is multiplied by the expected return (i.e., death benefit). In that the coverage is for aggregate experience, the mortality assumptions underlying any one policy risk are inappropriate to analyze the appropriate credits for non-proportional coverage.

Reserves for Reinsurance Assumed

37. In assuming any insurance risks, the assuming entity is required to establish policy reserves that are consistent with its obligations. The reserves it must establish, therefore, are also dependent upon the arrangement of reinsurance that is used. For risks transferred under the reinsurance arrangement, policy and claim reserves must be at least equal to the required reserves calculated using the same methodology and assumptions that would be used if the reinsurer had written the risk directly.

Accounting for Modified Coinsurance Arrangements

38. The following accounting applies to modified coinsurance arrangements:

   a. **Ceding Entity**—In a modified coinsurance arrangement, the ceding entity retains the assets equal to the modified coinsurance reserve. This reserve represents a prepayment of the reinsurer’s future obligation. Premiums paid or payable to the reinsurer net of any experience refunds shall result in the reduction of premium income. Policy benefit payments paid by the reinsurer shall reduce the ceding entity’s reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the summary of operations as they are earned. The modified coinsurance reserve is included in the category of policy reserves. The modified coinsurance reserve adjustment from period-to-period shall be reported separately in the summary of operations;

   b. **Assuming Entity (Reinsurer)**—Premiums received or receivable by the reinsurer shall increase premium income net of any experience refunds and policy benefit payments paid by the reinsurer shall increase the reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the summary of operations when payable. The statutory policy reserves exclude the modified coinsurance reserve. The modified coinsurance reserve adjustment from period-to-period shall be reported separately in the summary of operations. The reinsurer’s accounting of its obligations shall be consistent with the ceding entity’s accounting for the transfer of the obligations.
Accounting for Coinsurance With Funds Withheld Arrangements

39. The following accounting applies to coinsurance arrangements with funds withheld:

   a. **Ceding Entity**—Premiums paid or payable to the reinsurer net of any experience refunds shall reduce premium income. Policy benefit payments paid by the reinsurer shall reduce the ceding entity’s reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the summary of operations as they are earned. A net reduction to policy reserves shall be taken for the portion of the obligation assumed by the reinsurer. Any amounts withheld by the ceding entity shall be recorded as a separate liability. Any interest due or payable on the amounts withheld shall be recorded as interest on indebtedness;

   b. **Assuming Entity (Reinsurer)**—Premiums received or receivable by the reinsurer net of any experience refunds shall increase premium income and policy benefit payments paid by the reinsurer shall increase the reported policy benefits. Expense allowances paid by the reinsurer shall be reported separately in the summary of operations when payable. The reinsurer shall record its share of the statutory policy reserves attributable to the business identified in the contract. Any funds withheld by the ceding entity shall be recorded as an accounts receivable. Any interest earned or receivable on the funds withheld shall be recorded as miscellaneous income.

Uncollectible Reinsurance

40. The ceding and assuming companies must determine if reinsurance recoverables are collectible. If it is probable that reinsurance recoverables on paid or unpaid claim or benefit payments will be uncollectible, consistent with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets, these amounts shall be written off through a charge to the Statement of Operations utilizing the same accounts which established the reinsurance recoverables.

Unauthorized Reinsurance

41. If the reinsurer is not authorized to do business, or is not otherwise approved, the reinsurance is considered to be unauthorized. A liability is established to offset credit taken in various balance sheet accounts for reinsurance ceded to unauthorized reinsurers. Credit for reinsurance with unauthorized companies shall be permitted if the ceding entity holds securities or cash of the assuming entity equal to the reserve credit taken. Such deposits are to be held under the control of the ceding entity. Additionally, any securities held under such an arrangement must be investments that the ceding entity is allowed to make under the provision of the investment sections of the insurance statutes. Other permissible arrangements include irrevocable trusts or "clean" letters of credit. If the assuming entity is not licensed or is not an authorized reinsurer in the domiciliary state of the ceding entity or if the reinsurance does not meet required standards, the ceding entity must set up a net liability equal to the following:

   a. Reserve credits taken including any Interest Maintenance Reserve (IMR) liability adjustment; plus

   b. Claim liability credits taken on paid and unpaid (in course of settlement) claims recoverable; plus

   c. Other asset increases or liability reductions resulting from amounts recoverable from the assuming entity including commissions, expense allowances, modified coinsurance
reserve adjustments, experience rating refunds, and estimated incurred but not reported claim liabilities; less

d. Deposits by or funds withheld from the reinsurer, as provided for in the reinsurance treaty and in compliance with the security requirements of Appendix A-785, pledged as security for the payment of reinsurance obligations. Such deposits or funds are typically held by the ceding entity or are placed in a trust or custodial account. Amounts placed in trust or custodial accounts are held subject to withdrawal by, and under the control of, the ceding entity; less

e. Amounts of reinsurance recoverables covered by a clean, irrevocable letter of credit issued by a qualified U. S. financial institution as defined in Appendix A-785; less

f. Amounts contractually due the assuming entity.

42. The net liability defined above shall never be less than zero for any particular reinsurer. The change in liability for unauthorized reinsurance is a direct charge or credit to surplus.

Funds Held Under Reinsurance Treaties with Unauthorized Reinsurers

43. This liability is established for funds deposited by or contractually withheld from unauthorized reinsurers.

Accounting for Interest Maintenance Reserve (IMR)

44. The interest-related gain or loss (net of taxes) associated with the sale, transfer or reinsurance of a block of liabilities must be credited or charged to the IMR in accordance with the IMR instructions contained in the NAIC Annual Statement Instructions for Life and Accident and Health Insurance Companies.

Gains and Losses on Indemnity Reinsurance

45. Under an indemnity reinsurance arrangement the ceding entity continues to be liable to the policyholders and the reinsurer has no obligations to them except in the case of cut-through agreements. Typically the ceding entity will continue to perform all functions in connection with claims and other policyholder services. Gains and losses on indemnity reinsurance are defined as the net experience under the reinsurance contract within a calendar year. Net experience (underwriting gains or loss) includes ceded premiums, claims, expense allowances, reserve adjustments, any IMR liability adjustment, and experience refunds and dividends.

46. Losses that occur in any year of an indemnity reinsurance contract are immediately recognized. For reinsurance of in-force blocks of business, gains that occur in the initial calendar year are accounted for in accordance with Appendix A-791, paragraph 3.

47. For indemnity reinsurance agreements entered into for other than in-force blocks of business, the gains and losses are immediately recognized by the ceding and assuming entity.
Recaptures and Commutations

48. A recapture or a commutation of a reinsurance agreement is a transaction which results in the complete and final settlement and discharge of all present and future obligations between the parties arising out of the agreement or a portion of the agreement. Commuted and recaptured balances shall be accounted for by writing them off through the accounts, exhibits and schedules in which they were originally recorded. The assumed reserves and reserve credits taken are eliminated by the reinsurer and ceding entity, respectively. The reinsurer and ceding entity must also make any required IMR liability adjustment changes. Any net gain or loss is reported in the summary of operations.

Deposit Accounting

49. To the extent that a reinsurance contract does not, despite its form, provide for sufficient transfer of risk, or reinsures deposit-type contracts, amounts exchanged between the parties are to be accounted for and reported as follows:

a. At the outset of the reinsurance contract, the net consideration exchanged between the parties shall be recorded as an asset by the payer of the net considerations and as a liability by the receiver. The amount to be admitted as an asset is subject to the limitations for transactions with unauthorized reinsurers described in Appendix A-785. Throughout the life of the contract, receipts and disbursements shall be recorded through the asset/liability accounts. Income and losses shall be recognized by a party when, according to the terms of the contract, it has earned the amount and the other party has no recourse to repayment of such amount in future periods. When the contract is completed, or when there is a loss payment in excess of the deposit, any difference between consideration and recoveries shall be recorded as other miscellaneous insurance income or miscellaneous insurance loss;

b. No deduction shall be made from the policy or claim reserves on the balance sheet, schedules and exhibits.

Assumption Reinsurance

50. An entity may sell all or part of a block of insurance business through an assumption reinsurance agreement. Typically, under an assumption reinsurance arrangement, the reinsurance contract is intended to effect a novation, thereby to extinguish the ceding entity's liability to the policyholder. Assumption reinsurance requires that the reinsurer issue assumption certificates to the existing policyholders and take over responsibility for policyholder services. On occasion, the reinsurer will contract with the original entity to continue to provide such services on a fee basis or may contract with a third party. Regulatory approval of assumption reinsurance arrangements is usually required. Approval is also usually required from the policyholders, who have a predetermined time period in which to accept or reject the reinsurance transfer. After the deadline has passed, approval is considered implied for all outstanding responses. For those policyholders that reject the transfer, the reinsurance agreement typically converts to a indemnity arrangement. Under this circumstance, reinsurance accounting, as defined earlier in this statement, is to be followed.

Accounting for Assumption Reinsurance Transactions

51. Accounting for assumption reinsurance transactions involves all existing assets and liabilities with respect to the assumed policies. This involves policy reserves, policy loans, net due and deferred premiums, dividend accumulations, dividend liability, policy claims, advance premiums, unearned
interest on policy loans, etc. The total effect of all of these assets and liabilities is collectively referred to as net policy liabilities.

52. Typically, because a block of in-force business has value, the sale transaction will result in a gain to the ceding entity. If the policies are somewhat mature and have reasonably large net policy liabilities, the transaction probably will result in a transfer of cash or other assets by the ceding entity. In this case, the net policy liabilities released by the ceding entity will be greater than the value of the assets transferred. If the policies are young and have very small net policy liabilities, the assuming entity may pay some amount in the purchase. The ceding entity is to follow accounting for indemnity reinsurance for the policies sold until it has been formally relieved of the legal liability by either consent from the policyholders or when the expiration period for objecting to the transfer has expired. Upon release of the liability or risk, the ceding entity shall recognize any gain or loss immediately. The gain or loss shall be the difference between the book value of the assets and liabilities including any unamortized IMR allocated or related to the block of business transferred. Direct and ceded balances are to be eliminated and gains are to be taken into income proportionally as the policyholders approve the transfer or at the end of the response period.

53. The assuming entity is to value the assets acquired at the date of acquisition at their market values, and the reserves are to be established according to statutory requirements based on the benefits in the individual policies reinsured. If the liabilities exceed the assets, the difference represents goodwill that must be amortized into operations using the interest method over the life of the policies, but for a period not to exceed 10 years. Goodwill resulting from assumption reinsurance transactions shall be included in the total goodwill of an entity when calculating the amount of goodwill that is a nonadmitted asset pursuant to SSAP No. 68—Business Combinations and Goodwill. If the assets exceed the liabilities, the assuming entity shall record a deferred liability and amortize the amount into operations using the interest method over the expected life of the business but not to exceed ten years.

54. Upon initiation of the assumption reinsurance contract, the ceding and assuming companies are to report all balances reinsured as direct adjustments to the balance sheet. Any net gain or loss is reported as miscellaneous income when recognized.

Accounting for Non-economic Assumption Reinsurance Transactions

55. When the sale, transfer, or reinsuranace of an in-force block of business occurs between affiliated companies that is not an economic transaction, the ceding and assuming entity shall not recognize any gain or loss. The statutory liabilities and any unamortized IMR shall be transferred from the ceding entity to the assuming entity without adjustment. The assuming entity shall amortize any transferred IMR at the same rate or amount that would have occurred for the ceding entity. To the extent that the value of the assets transferred by the ceding entity or the net asset value recorded by the assuming entity differs from the liabilities including any unamortized IMR, the ceding and assuming entity shall defer and amortize their respective differences consistent with the interest method described for non-affiliated transactions.

Disclosures

56. For life and annuity reserves the financial statements shall disclose the following:

a. A description of reserve practices concerning the following:

i. Waiver of deduction of deferred fractional premiums upon death of insured;

ii. Return of portion of final premium for periods beyond the date of death;
iii. Amount of any surrender value promised in excess of the reserve as legally computed;

b. The methods employed in the valuation of substandard policies;

c. The amount of insurance, if any, for which the gross premiums are less than the net premiums according to the valuation standards;

d. The method used to determine tabular interest, tabular less actual reserves released, and tabular cost (by formula or from the basic data for such items);

e. The method of determination of tabular interest on funds not involving life contingencies; and

f. The nature of significant other reserve changes.

57. Disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics as follows:

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

   (a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the entity;

   (b) In installments over five years or more, with or without a reduction in the interest rate during the installment period.

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in v.(d) below;

iii. At market value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current market value, and the liabilities are stated at the current market value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at market value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

   (a) In a lump sum without adjustment;

   (b) In installments over less than five years, with or without a reduction in interest rate during the installment period;
(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues;

(e) All others.

b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded

e. Total net.

58. Reconcile the total annuity reserves and deposit fund liabilities amount disclosed to the appropriate sections of the Aggregate Reserve for Life Policies and Contracts Exhibit and the Deposit Funds and Other Liabilities without Life or Disability Contingencies Exhibit, of the Life, Accident & Health Annual Statement and the corresponding lines in the Separate Accounts Statement.

59. Disclosures shall be made consistent with the interrogatories made under the “Ceded Reinsurance Report” detailed in the NAIC Annual Statement Instructions For Life, Accident and Health Insurance Companies in the Notes to the Financial Statements section.

60. Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the name or names of the reinsurer(s):

a. Claims incurred;

b. Claim adjustment expenses incurred;

c. Premiums earned; and

d. Other.

61. Describe commutation of ceded reinsurance during the year reported in the following annual statement classifications, including the name or names of the reinsurer(s):

a. Claims incurred;

b. Claim adjustment expenses incurred;

c. Premiums earned; and

d. Other.

62. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

63. This statement adopts FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts with modification. The statutory accounting principles
established by this statement differ substantially from GAAP, reflecting much more detailed guidance, as follows:

a. Reserve credits taken by ceding companies as a result of reinsurance contracts are netted against the ceding entity’s policy and claim reserves and unpaid claims;

b. First year and renewal ceding commissions on indemnity reinsurance of new business are recognized as income. Ceding commissions on ceded in-force business are included in the calculation of initial gain or loss;

c. As discussed in SSAP No. 50, statutory accounting defines deposit-type contracts as those contracts which do not include any mortality or morbidity risk. GAAP defines investment contracts as those that do not subject the insurance enterprise to significant policyholder mortality or morbidity risk. (The distinction is any mortality or morbidity risk for statutory purposes vs. significant mortality or morbidity risk for GAAP purposes.) Therefore, a contract may be considered an investment contract for GAAP purposes, and that same contract may be considered other than deposit-type for statutory purposes. A reinsurance treaty covering contracts that have insignificant mortality or morbidity risk (i.e., contracts classified as other than deposit-type contracts for statutory purposes, but investment contracts for GAAP purposes) that does not transfer that mortality or morbidity risk, but does transfer all of the significant risk inherent in the business being reinsured (e.g., lapse, credit quality, reinvestment or disintermediation risk) qualifies for reinsurance accounting for statutory reporting purposes, but would not qualify for reinsurance accounting treatment for GAAP purposes;

d. Initial gains or losses on indemnity reinsurance of in-force blocks of business have unique accounting treatment. A portion of the initial gains or losses (equal to the tax effect of the initial gain or loss in surplus) is reported as commissions and expense allowances on reinsurance ceded in the statement of operations. The remainder of the initial gains or losses is reported on a net-of-tax basis as a write-in for gain or loss in surplus in the Capital and Surplus Account. In subsequent years, the ceding entity recognizes income on the reinsurance ceded line for the net-of-tax profits that emerged on the reinsured block of business with a corresponding decrease in the write-in for gain or loss in surplus;

e. This statement prohibits recognition of a gain or loss in connection with the sale, transfer or reinsurance of an in-force block of business between affiliated entities in a non-economic transaction. Any difference between the assets transferred by the ceding entity and the liabilities, including unamortized IMR, shall be deferred and amortized under the interest method;

f. This statement requires that a liability be established through a provision reducing surplus for unsecured reinsurance recoverables from unauthorized reinsurers;

g. This statement prescribes offsetting certain reinsurance premiums.

64. This statement incorporates Appendices A-785 and A-791.

Effective Date and Transition

65. This statement is effective for years beginning January 1, 2001, and, except as noted in paragraph 66, applies to all reinsurance contracts entered into or amended subsequent to January 1, 1996.
Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

66. The accounting and reporting practices revised by this statement shall not apply to reinsurance agreements in force on January 1, 1996.

67. The requirements of paragraph 18 relating to reinsurance of deposit-type contracts shall be effective for all accounting periods beginning on or after January 1, 2001.

68. Agreements which were: a) entered into on or after January 1, 1996, and which do not transfer risk shall be accounted for as deposits; b) amended on or after January 1, 1996, and which do not transfer risk shall be accounted for prospectively as deposits with the appropriate reclassification of outstanding reinsurance balances as deposits with no surplus impact. For arrangements which were amended on or after January 1, 1996, a change in accounting principle associated with the revised accounting in this statement shall be applied prospectively with no adjustment to surplus as required by SSAP No. 3.

RELEVANT ISSUE PAPERS

- Issue Paper No. 74—Life, Deposit-Type and Accident and Health Reinsurance
SSAP NO. 61—GLOSSARY

Assume

To accept or take over an insurance risk; the reverse of cede.

Assumption Reinsurance

The form of reinsurance that extinguishes the ceding entity’s liability to the policyholder. The reinsurer directly assumes all the service and financial obligations of the original entity on the block of business being assumed. Unlike indemnity reinsurance, assumption reinsurance makes the assuming entity (reinsurer) directly liable to the policyholders. In some instances, the original entity may continue to administer and service the business but, if it does so, it does it as the agent of the reinsurer.

Automatic Maximum Limit

The amount of risk which can be automatically ceded if all other conditions are met. Also called the binding authority.

Authorized Reinsurer

An assuming entity is considered an authorized reinsurer if either: 1) it is licensed in the domiciliary state of the ceding entity; 2) it is an accredited reinsurer in the domiciliary state of the ceding entity; 3) it is domiciled and licensed in a state which employs standards regarding credit for reinsurance substantially similar to those of the domiciliary state of the ceding entity and maintains surplus of at least $20 million; 4) it maintains a trust for the benefit of all its U.S. policyholders and ceding entities equal to its U.S. liabilities plus a level of surplus prescribed in the NAIC model law on credit for reinsurance; or 5) it is a reinsurer accepting risks located in jurisdictions where the laws require reinsurance to be ceded to such entity.

Automatic Reinsurance

A reinsurance agreement under which the reinsurer is obligated to accept or assume risks which meet certain specific criteria based on the ceding entity’s underwriting. The reinsurance is ceded on the underwriting judgment of the ceding entity without a case by case concurrence of the reinsurer, up to a specified amount, the automatic maximum limit. The ceding entity normally is required to keep its full stipulated retention for the class of business involved on any case ceded automatically. Often certain defined types of cases are not eligible for automatic treatment. Cases in excess of the automatic maximum limits or otherwise ineligible for automatic cover can usually be submitted for facultative consideration.

Binding Authority

The amount of risk over the ceding entity’s retention which can be automatically ceded if all other conditions are met. Also called the automatic maximum limit.

---

1Definitions in this glossary are adapted from the Society of Actuaries’ Reinsurance Section Treaty Committee paper, “Discussion of Reinsurance Provisions in a Life Reinsurance Agreements,” dated August 1, 1994, and the glossary contained in Life, Health, and Annuity Reinsurance, by John E. Tiller, Jr., FSA, and Denise Fagerbert, FSA (ACTEX Publications, Inc.).
Catastrophe Reinsurance

A form of non-proportional reinsurance offering the ceding entity protection against excess losses from multiple claims arising out of a single event or a single large loss. Typically, reinsurance benefits will be paid if at least a specified minimum number of claims exceeding a minimum threshold amount of benefits arises out of a single event. When these conditions are met, the ceding entity is reimbursed for a percentage (often 100%) of the claims over the threshold attachment point up to the maximum reinsurance benefit specified in the treaty.

Cede

To transfer an insurance risk from the entity originally issuing the policy to another insurance entity known as the reinsurer; the reverse of assume.

Cession

The process of transferring risk from the ceding entity to the reinsurer.

Coinsurance

Indemnity life reinsurance in which the reinsurer participates in the risks and rewards of the policy provisions; the ceding entity retains its liability to the contractual relationship with the insured. The reinsurer is liable not only for its portion of the death benefit, but also all the nonforfeiture values. The reinsurer receives its proportionate share of the ceding entity’s gross premium less a coinsurance allowance for commissions and other expenses. The reinsurer holds the reserve on its portion of the policy and usually retains any excess investment earnings.

Commutation

The termination of all obligations between the parties to a reinsurance agreement, normally accompanied by a final cash settlement. Commutation may be required by the reinsurance agreement or may be effected by mutual agreement.

Credit for Reinsurance

Negative entries (i.e., reductions) to the ceding entity’s policy reserves and positive entries (i.e., increases) to the ceding entity’s assets (amounts recoverable from reinsurers). In the context of reinsurance, the term “credit” is the opposite of its meaning in pure accounting terminology. In balance sheet accounting, a credit is a positive entry to a liability (reserve).

Cut Through Endorsement

An endorsement to a policy and referred to in a reinsurance agreement which requires that, in the event of the ceding entity’s insolvency, any loss covered under the reinsurance agreement will be paid by the reinsurer directly to the insured (or a third party beneficiary).

Experience Rating Refund

A part of the profits under a reinsurance agreement which is returned to the ceding entity, allowing the ceding entity to share in a portion of profits realized on the reinsurance.
Facultative Reinsurance

Reinsurance under which the ceding entity has the option (faculty) of submitting and the reinsurer has the option of accepting or declining individual risks. Thus it is reinsurance that the ceding entity chooses to submit to a reinsurer for its consideration and which may be ceded to the reinsurer only if the reinsurer makes an offer to reinsure. The underwriting classification assigned to the risk for purposes of the reinsurance is determined by the reinsurer. Facultative reinsurance may be ceded under the facultative terms of an automatic treaty for risks that the ceding entity cannot or does not wish to cede automatically, or it may be ceded under a purely facultative treaty.

Facultative Obligatory Reinsurance

A form of reinsurance that shares aspects of both facultative and automatic reinsurance. As with facultative reinsurance, the ceding entity has no obligation to offer specific cases to the reinsurer. However, once a case is offered to the facultative obligatory reinsurer, the case is treated largely as if it were automatic. The reinsurer receives no underwriting information and is offered the case at the ceding entity's rating with the option to accept or reject the case. While not always stated in the treaty, it is usually understood that the case will be rejected by the reinsurer only if the reinsurer does not have available capacity (i.e., its own retention and automatic retrocession facilities).

Fronting Arrangement

A situation where one insurance entity issues policies to specified applicants and reinsures all or substantially all of the risks on the insurance to another insurance entity for a fee or portion of the profits. Fronting typically is used in jurisdictions where the reinsuring entity is not licensed to do business.

Funds Withheld

Assets that would normally be paid over to a reinsurer but are withheld by the ceding entity to permit statutory credit for nonadmitted reinsurance, to reduce a potential credit risk, or to retain control over investments. Under certain conditions, the reinsurer may withhold funds from the ceding entity.

Indemnity Reinsurance

The form of reinsurance under which the ceding entity secures reinsurance as a partial or total reimbursement on the risks assumed on policies it has issued or reinsured. Under indemnity reinsurance, the reinsurer has no relationship with the original policyholders; the ceding entity continues to administer and service the insurance on which it has secured reinsurance and remains fully responsible for all the interests of the policyholders. If the reinsurer cannot or does not honor its obligations to the ceding entity, the ceding entity would still be fully liable to its policyholders.

Indemnity reinsurance may be employed, not only between a direct writing entity and a reinsurer, but also between two reinsurers when retrocession of risks is being implemented.
Mod-co Reserve Adjustment

The net of two modified coinsurance items: the interest on reserves (payable by the ceding entity to the reinsurer) and the increase in the reserve (payable by the reinsurer to the ceding entity) or decrease in the reserve (payable by the ceding entity to the reinsurer).

Modified Coinsurance

Indemnity life insurance that differs from coinsurance only in that the reserves are retained by the ceding entity, which represents a prepayment of all or a portion of the reinsurer’s future obligation. Periodically an adjustment is made to the mean reserve on deposit with the ceding entity. This is usually done quarterly but may be done more frequently. If the reserve increases, the increase in mean reserve less interest on the mean reserve held at the end of the previous accounting period is paid by the reinsurer to the ceding entity. If the mean reserve decreases, the decrease and interest are paid by the ceding entity to the reinsurer. The appropriate interest rate is defined in the treaty.

Net Amount at Risk

The excess of the death benefit of a policy over the policy reserve. It is the amount which must come from surplus in the event of a death claim.

Non-proportional Reinsurance

Reinsurance that is not secured on individual lives for specific individual amounts of reinsurance, but rather reinsurance that protects the ceding entity’s overall experience on its entire portfolio of business, or at least a broad segment of it. The most common forms of non-proportional reinsurance are stop loss reinsurance and catastrophe reinsurance.

Non-proportional reinsurance is a form of casualty insurance. Usually neither the premium nor continuance of coverage is guaranteed beyond a specified term.

Pool

A method of allocating reinsurance among several reinsurers. Using this method, each reinsurer receives a specified percentage of risk ceded into the pool. Percentages may vary by reinsurer.

Proportional Reinsurance

Reinsurance on a particular life for a specified amount or share generally, though not necessarily, secured at the time the policy is issued to the insured. The continuation of coverage guarantees for the reinsurance generally parallel those in the life insurance coverage reinsured. Most life reinsurance conducted in the United States is done so on a proportional basis.

Recapture

The process by which the ceding entity recovers the liabilities transferred to a reinsurer. Reinsurance treaties often provide that if a ceding entity increases its retention, the ceding entity can, under previously agreed upon terms, take back (recapture) amounts of insurance previously ceded to fill up its new retention.
Reinsurer

An insurance entity to which another insurance entity can transfer, through the mechanism of reinsurance, part or all of its risk under a policy or policies it has issued or reinsured. If the transfer of risk is secured through indemnity reinsurance, the reinsurer becomes liable to the ceding entity for the reinsured benefits while the original entity, the ceding entity, remains fully liable to its insured policyholders. If the transfer of risk is secured through assumption reinsurance, the original entity steps out of the picture and transfers all of its liabilities and responsibilities to the reinsurer, who then is henceforth directly responsible to the original policyholders.

Retention

The portion of a policy which the ceding entity retains for its own liability on life insurance. It is normally expressed in terms of face amount of insurance, especially if more than the mortality risk is reinsured. It is sometimes expressed in terms of risk amount, particularly with single premium products.

An entity’s retention is often graded by age and/or underwriting classification. Less frequently, special reduced retentions apply to specified risks, such as those engaging in aviation activities or with histories of coronary artery disease.

Retrocession

A form of reinsurance under which a reinsurer cedes to another insurer (the retrocessionaire) part or all of the reinsurance it has assumed from another entity. The original ceding entity has no relationship or recourse to the retrocessionaire and the original reinsurer remains fully liable to its client, the original ceding entity.

Retrocession provides a reinsurer with a method of accommodating its clients with respect to larger risks while still managing its own risk exposure.

Stop Loss Reinsurance

A form of non-proportional reinsurance under which the reinsurer pays some or all of a ceding entity’s aggregate retained losses in excess of a predetermined dollar amount or in excess of a percentage of premium. Stop loss coverage provides protection against an excessive number or amount of claims in any given contract period.

Unauthorized Reinsurer

A reinsurer that is neither authorized nor accredited (see “Authorized Reinsurer”). The ceding entity still may be able to take credit in its financial statements for reinsurance ceded to an unauthorized reinsurer if the reinsurer provides sufficient security for amounts due under the reinsurance treaty. This can usually be accomplished by permitting the ceding entity to withhold funds due the reinsurer (funds withheld approach) or by the reinsurer providing the ceding entity with a letter of credit, in a form acceptable to the state in question, or by the reinsurer establishing a trust agreement for the benefit of the ceding entity.
Yearly Renewable Term (YRT)

A form of life reinsurance under which the mortality or morbidity risks, but not the permanent plan reserves, are transferred to the reinsurer for a premium that varies each year with the amount at risk and the ages of the insureds. The amount of reinsurance, which may change annually, is generally the amount of insurance provided by the policy in excess of the primary insurer's reserve.

PROPERTY AND CASUALTY REINSURANCE

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty reinsurance. A wide range of methods for structuring reinsurance arrangements can be employed depending on the requirements of individual companies. This statement deals with the more commonly employed methods.

SUMMARY CONCLUSION

General

2. Reinsurance is the assumption by an insurer of all or part of a risk undertaken originally by another insurer. The transaction whereby a reinsurer cedes all or part of the reinsurance it has assumed to another reinsurer is known as a retrocession.

3. Reinsurance has many beneficial purposes. Among them are that it enables an insurance entity to (a) expand its capacity, (b) share large risks with other insurers, (c) spread the risk of potential catastrophes and stabilize its underwriting results, (d) finance expanding volume by sharing the financial burden of reserves, (e) withdraw from a line or class of business, and (f) reduce its net liability to amounts appropriate to its financial resources.

4. Reinsurance agreements are generally classified as treaty or facultative. Treaty reinsurance refers to an arrangement involving a class or type of business written, while facultative reinsurance involves individual risks offered and accepted.

5. Reinsurance coverage can be pro rata (i.e., proportional reinsurance) where the reinsurer shares a pro rata portion of the losses and premium of the ceding entity or excess of loss (i.e., non-proportional) where the reinsurer, subject to a specified limit, indemnifies the ceding entity against the amount of loss in excess of a specified retention. Most reinsurance agreements fall into one of the following categories:

I. Treaty Reinsurance Contracts—Pro Rata:
   A. Quota Share Reinsurance—The ceding entity is indemnified against a fixed percentage of loss on each risk covered in the agreement;
   B. Surplus Share Reinsurance—The ceding entity establishes a retention or "line" on the risks to be covered and cedes a fraction or a multiple of that line on each policy subject to a specified maximum cession;

II. Treaty Reinsurance Contracts—Excess of Loss:
   A. Excess Per Risk Reinsurance—The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to each risk covered by a treaty;
   B. Aggregate Excess of Loss Reinsurance—The ceding entity is indemnified against the amount by which the ceding entity’s net retained losses incurred during a specific period exceed either a predetermined dollar amount or a percentage of the entity’s subject premiums for the specific period subject to a specified limit;
III. Treaty Reinsurance Contracts—Catastrophe: The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to an accumulation of losses resulting from a catastrophic event or series of events;

IV. Facultative Reinsurance Contracts—Pro Rata: The ceding entity is indemnified for a specified percentage of losses and loss expenses arising under a specific insurance policy in exchange for that percentage of the policy's premium;

V. Facultative Reinsurance Contracts—Excess of Loss: The ceding entity is indemnified, subject to a specified limit, for losses in excess of its retention with respect to a particular risk.

Characteristics of Reinsurance Agreements

6. Common contract provisions that may affect accounting practices include:
   a. Reporting responsibility of the ceding entity—Details required and time schedules shall be established;
   b. Payment terms—Time schedules, currencies intended, and the rights of the parties to withhold funds shall be established;
   c. Payment of premium taxes—Customarily the responsibility of the ceding entity, a recital of nonliability of the reinsurer may be found;
   d. Termination—May be on a cut-off or run-off basis. A cut-off provision stipulates that the reinsurer shall not be liable for loss as a result of occurrences taking place after the date of termination. A run-off provision stipulates that the reinsurer shall remain liable for loss under reinsured policies in force at the date of termination as a result of occurrences taking place after the date of termination until such time as the policies expire or are canceled; and
   e. Insolvency clause—Provides for the survival of the reinsurer's obligations in the event of insolvency of the ceding entity, without diminution because of the insolvency.

7. Reinsurance contracts shall not permit entry of an order of rehabilitation or liquidation to constitute an anticipatory breach by the reporting entity, nor grounds for retroactive revocation or retroactive cancellation of any contracts of the reporting entity.

Required Terms for Reinsurance Agreements

8. In addition to credit for reinsurance requirements applicable to reinsurance transactions generally, no credit or deduction from liabilities shall be allowed by the ceding entity for reinsurance recoverable where the agreement was entered into after the effective date of these requirements (see paragraphs 76 and 77) unless each of the following conditions is satisfied:
   a. The agreement must contain an acceptable insolvency clause;
   b. Recoveries due the ceding entity must be available without delay for payment of losses and claim obligations incurred under the agreement, in a manner consistent with orderly payment of incurred policy obligations by the ceding entity;
c. The agreement shall constitute the entire contract between the parties and must provide no guarantee of profit, directly or indirectly, from the reinsurer to the ceding entity or from the ceding entity to the reinsurer;

d. The agreement must provide for reports of premiums and losses, and payment of losses, no less frequently than on a quarterly basis, unless there is no activity during the period. The report of premiums and losses shall set forth the ceding entity’s total loss and loss expense reserves on the policy obligations subject to the agreement, so that the respective obligations of the ceding entity and reinsurer will be recorded and reported on a basis consistent with this statement; and

e. With respect to retroactive reinsurance agreements, the following additional conditions apply:

i. The consideration to be paid by the ceding entity for the retroactive reinsurance must be a sum certain stated in the agreement;

ii. Direct or indirect compensation to the ceding entity or reinsurer is prohibited;

iii. Any provision for subsequent adjustment on the basis of actual experience in regard to policy obligations transferred, or on the basis of any other formula, is prohibited in connection with a retroactive reinsurance transaction, except that provision may be made for the ceding entity’s participation in the reinsurer’s ultimate profit, if any, under the agreement;

iv. A retroactive reinsurance agreement shall not be canceled or rescinded without the approval of the commissioner of the domiciliary state of the ceding entity.

Reinsurance Contracts Must Include Transfer of Risk

9. The essential ingredient of a reinsurance contract is the transfer of risk. The essential element of every true reinsurance agreement is the undertaking by the reinsurer to indemnify the ceding entity, i.e., reinsured entity, not only in form but in fact, against loss or liability by reason of the original insurance. Unless the agreement contains this essential element of risk transfer, no credit shall be recorded.

10. Insurance risk involves uncertainties about both (a) the ultimate amount of net cash flows from premiums, commissions, claims, and claims settlement expenses (underwriting risk) and (b) the timing of the receipt and payment of those cash flows (timing risk). Actual or imputed investment returns are not an element of insurance risk. Insurance risk is fortuitous—the possibility of adverse events occurring is outside the control of the insured.

11. Determining whether an agreement with a reinsurer provides indemnification against loss or liability (transfer of risk) relating to insurance risk requires a complete understanding of that contract and other contracts or agreements between the ceding entity and related reinsurers. A complete understanding includes an evaluation of all contractual features that (a) limit the amount of insurance risk to which the reinsurer is subject (e.g., experience refunds, cancellation provisions, adjustable features, or additions of profitable lines of business to the reinsurance contract) or (b) delay the timely reimbursement of claims by the reinsurer (e.g., payment schedules or accumulating retentions from multiple years).

12. Indemnification of the ceding entity against loss or liability relating to insurance risk in reinsurance requires both of the following:
a. The reinsurer assumes significant insurance risk under the reinsured portions of the underlying insurance agreements; and

b. It is reasonably possible that the reinsurer may realize a significant loss from the transaction.

13. A reinsurer shall not have assumed significant insurance risk under the reinsured contracts if the probability of a significant variation in either the amount or timing of payments by the reinsurer is remote. Implicit in this condition is the requirement that both the amount and timing of the reinsurer’s payments depend on and directly vary with the amount and timing of claims settled by the ceding entity. Contractual provisions that delay timely reimbursement to the ceding entity prevent this condition from being met.

14. The ceding entity’s evaluation of whether it is reasonably possible for a reinsurer to realize a significant loss from the transaction shall be based on the present value of all cash flows between the ceding and assuming companies under reasonably possible outcomes, without regard to how the individual cash flows are described or characterized. An outcome is reasonably possible if its probability is more than remote. The same interest rate shall be used to compute the present value of cash flows for each reasonably possible outcome tested. A constant interest rate shall be used in determining those present values because the possibility of investment income varying from expectations is not an element of insurance risk. Judgment is required to identify a reasonable and appropriate interest rate.

15. Significance of loss shall be evaluated by comparing the present value of all cash flows, determined as described in paragraph 14, with the present value of the amounts paid or deemed to have been paid to the reinsurer. If, based on this comparison, the reinsurer is not exposed to the reasonable possibility of significant loss, the ceding entity shall be considered indemnified against loss or liability relating to insurance risk only if substantially all of the insurance risk relating to the reinsured portions of the underlying insurance agreements has been assumed by the reinsurer. In this narrow circumstance, the reinsurer’s economic position is virtually equivalent to having written the insurance contract directly. This condition is met only if insignificant insurance risk is retained by the ceding entity on the retained portions of the underlying insurance contracts, so that the reinsurer’s exposure to loss is essentially the same as the reporting entity’s.

16. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer’s payment to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurer’s reimbursement to the ceding entity shall be closely scrutinized.

**Accounting for Reinsurance**

17. Reinsurance recoverables shall be recognized in a manner consistent with the liabilities (including estimated amounts for claims incurred but not reported) relating to the underlying reinsured contracts. Assumptions used in estimating reinsurance recoverables shall be consistent with those used in estimating the related liabilities.

18. Accounting for members of a reinsurance pool shall follow the accounting for the pool member which issued the underlying policy. Specific accounting rules for underwriting pools and associations are addressed in SSAP No. 63—Underwriting Pools and Associations Including Intercompany Pools.
19. Reinsurance recoverable on loss payments is an admitted asset. Notwithstanding the fact that reinsurance recoverables on paid losses may meet the criteria for offsetting under the provisions of SSAP No. 64—Offsetting and Netting of Assets and Liabilities (SSAP No. 64), reinsurance recoverables on paid losses shall be reported as an asset without any available offset. Unauthorized reinsurance is included in this asset and reflected separately as a liability to the extent required. Penalty for overdue authorized reinsurance shall be reflected as a liability.

20. Funds held or deposited with reinsured companies, whether premiums withheld as security for unearned premium and outstanding loss reserves or advances for loss payments, are admitted assets provided they do not exceed the liabilities they secure and provided the reinsured is solvent. Those funds which are in excess of the liabilities, and any funds held by an insolvent reinsured, shall be nonadmitted.

21. Prospective reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for losses that may be incurred as a result of future insurable events covered under contracts subject to the reinsurance. Retroactive reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance. A reinsurance agreement may include both prospective and retroactive reinsurance provisions.

22. The distinction between prospective and retroactive reinsurance agreements is based on whether the agreement reinsures future or past insured events covered by the underlying insurance policies. For example, in occurrence-based insurance, the insured event is the occurrence of a loss covered by the insurance contract. In claims-made insurance, the insured event is the reporting to the insurer, within the period specified by the policy, of a claim for a loss covered by the insurance agreement. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance agreement is a retroactive agreement. (However, a reinsurance agreement that reinsures claims reported to an insurer that are covered under currently effective claims-made insurance policies is a prospective reinsurance agreement.)

23. It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the agreement is substantively prospective shall be determined based on the facts and circumstances. However, except as respects business assumed by a U.S. reinsurer from ceding companies domiciled outside the U.S. and not affiliated with such reinsurer, or business assumed by a U.S. reinsurer where either the lead reinsurer or a majority of the capacity on the agreement is domiciled outside the U.S. and is not affiliated with such reinsurer, if an agreement entered into, renewed or amended on or after January 1, 1994 has not been finalized, reduced to a written form and signed by the parties within nine months after the commencement of the policy period covered by the reinsurance arrangement, then the arrangement is presumed to be retroactive and shall be accounted for as a retroactive reinsurance agreement. This presumption shall not apply to: (a) facultative reinsurance contracts, nor to (b) reinsurance agreements with more than one reinsurer which are signed by the lead reinsurer (i.e., the reinsurer setting the terms of the agreement for the reinsurers) within nine months after the commencement of the policy period covered by the reinsurance agreement, nor to (c) reinsurance agreements with more than one reinsurer (whether signed by the lead reinsurer or not) which were entered into, renewed or amended on or before December 31, 1996, (and which were not renewed or amended after that date) if reinsurers representing more than 50% of the capacity on the agreement have signed cover notes, placement slips or similar documents describing the essential terms of coverage and exclusions within nine months after the commencement of the policy period covered by the reinsurance arrangement. Also exempt from this presumption are reinsurance agreements where one of the parties is in conservation, rehabilitation, receivership or liquidation proceedings.
24. Prospective and retroactive provisions included within a single agreement shall be accounted for separately. If separate accounting for prospective and retroactive provisions included within a single agreement is impracticable, the agreement shall be accounted for as a retroactive agreement provided the conditions for reinsurance accounting are met.

Accounting for Prospective Reinsurance Agreements

25. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of written and earned premiums by the ceding entity and shall be earned over the remaining contract period in proportion to the amount of reinsurance protection provided or, if applicable, until the reinsurer's maximum liability under the agreement has been exhausted. If the amounts paid are subject to adjustment and can be reasonably estimated, the basis for amortization shall be the estimated ultimate amount to be paid. Reinstatement premium, if any, shall be earned over the period from the reinstatement of the limit to the expiration of the agreement.

26. Changes in amounts of estimated reinsurance recoverables shall be recognized as a reduction of gross losses and loss expenses incurred in the current period statement of income. Reinsurance recoverables on paid losses shall be reported as an asset, reinsurance recoverables on loss and loss adjustment expense payments, in the balance sheet. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses.

Accounting for Retroactive Reinsurance Agreements

27. Certain reinsurance agreements which transfer both components of insurance risk cover liabilities which occurred prior to the effective date of the agreement. Due to potential abuses involving the creation of surplus to policyholders, and the distortion of underwriting results, special accounting treatment for these agreements is warranted.

28. All retroactive reinsurance agreements entered into, renewed or amended on or after January 1, 1994 (including subsequent development of such transactions) shall be accounted for and reported in the following manner:

a. The ceding entity shall record, without recognition of the retroactive reinsurance, loss and loss expense reserves on a gross basis on the balance sheet and in all schedules and exhibits;

b. The assuming entity shall exclude the retroactive reinsurance from loss and loss expense reserves and from all schedules and exhibits;

c. The ceding entity and the assuming entity shall report by write-in item on the balance sheet, the total amount of all retroactive reinsurance, identified as retroactive reinsurance reserve ceded or assumed, recorded as a contra-liability by the ceding entity and as a liability by the assuming entity;

d. The ceding entity shall, by write-in item on the balance sheet, restrict surplus resulting from any retroactive reinsurance as a special surplus fund, designated as special surplus from retroactive reinsurance account;

e. The surplus gain from any retroactive reinsurance shall not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid;
f. The special surplus from retroactive reinsurance account for each respective retroactive reinsurance agreement shall be reduced at the time the ceding entity begins to recover funds from the assuming entity in amounts exceeding the consideration paid by the ceding entity under such agreement, or adjusted as provided in subparagraph 28 j.;

g. For each agreement, the reduction in the special surplus from retroactive reinsurance account shall be limited to the lesser of (i) the actual amount recovered in excess of consideration paid or (ii) the initial surplus gain resulting from the respective retroactive reinsurance agreement. Any remaining balance in the special surplus from retroactive reinsurance account derived from any such agreement shall be returned to unassigned funds (surplus) upon elimination of all policy obligations subject to the retroactive reinsurance agreement;

h. The ceding entity shall report the initial gain arising from a retroactive reinsurance transaction (i.e., the difference between the consideration paid to the reinsurer and the total reserves ceded to the reinsurer) as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Gain and included under Other Income;

i. The assuming entity shall report the initial loss arising from a retroactive reinsurance transaction, as defined in the preceding subparagraph 28 g., as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Loss and included under Other Income;

j. Any subsequent increase or reduction in the total reserves ceded under a retroactive reinsurance agreement shall be reported in the manner described in the preceding subparagraphs 28 h. and 28 i., in order to recognize the gain or loss arising from such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry on the balance sheet shall be adjusted, upward or downward, to reflect such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry shall be equal to or less than the total ceded reserves under all retroactive reinsurance agreements in-force as of the date of the financial statement. Special surplus arising from a retroactive reinsurance transaction shall be considered to be earned surplus (i.e., transferred to unassigned funds (surplus)) only when cash recoveries from the assuming entity exceed the consideration paid by the ceding entity as respects such retroactive reinsurance transaction; and

k. The consideration paid for a retroactive reinsurance agreement shall be reported as a decrease in ledger assets by the ceding entity and as an increase in ledger assets by the assuming entity.

(For an illustration of ceding entity accounting entries see Question 33 in Exhibit A.)

29. Portfolio reinsurance is the transfer of an insurer's entire liability for in force policies or outstanding losses, or both, of a segment of the insurer's business. Loss portfolio transactions are to be accounted for as retroactive reinsurance.

30. The accounting principles for retroactive reinsurance agreements in paragraph 28 shall not apply to the following types of agreements (which shall be accounted for as prospective reinsurance agreements):

a. Structured settlement annuities for individual claims purchased to implement settlements of policy obligations;
b. Novations, (i.e., (i) transactions in which the original direct insurer’s obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated or (ii) transactions in which the original assuming entity’s obligations are completely extinguished) resulting in no further exposure to loss arising on the business novated, provided that (1) the parties to the transaction are not affiliates (or if affiliates, that the transaction has the prior approval of the domiciliary regulators of the parties) and (2) the accounting for the original reinsurance agreement will not be altered from retroactive to prospective;

c. The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business; or

d. Intercompany reinsurance agreements, and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction.

31. Retroactive reinsurance agreements resulting in surplus gain to the ceding entity (with or without risk transfer) entered into between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) shall be reported as follows:

   a. The consideration paid by the ceding entity shall be recorded as a deposit and reported as a nonadmitted asset; and

   b. No deduction shall be made from loss and loss adjustment expense reserves on the ceding entity’s balance sheet, schedules, and exhibits.

32. The accounting and reporting provisions applicable to retroactive reinsurance apply to all transactions transferring liabilities in connection with a court-ordered rehabilitation, liquidation, or receivership. The requirement to include stipulated contract provisions in the reinsurance agreements shall not apply to these transactions, with written approval of the ceding entity’s domiciliary commissioner.

33. Novations meeting the requirements of subparagraph 30 b. shall be accounted for as prospective reinsurance agreements. The original direct insurer, or the original assuming insurer, shall report amounts paid as a reduction of written and earned premiums, and unearned premiums to the extent that premiums have not been earned. Novated balances (e.g., loss and loss adjustment expense reserves) shall be written off through the accounts, exhibits, and schedules in which they were originally recorded. The assuming insurer shall report amounts received as written and earned premiums, and obligations assumed as incurred losses in the statement of income.

Deposit Accounting

34. To the extent that a reinsurance agreement does not, despite its form, transfer both components of insurance risk, all or part of the agreement shall be accounted for and reported as deposits in the following manner:

   a. At the outset of the reinsurance agreement the net consideration paid by the ceding entity (premiums less commissions or other allowances) shall be recorded as a deposit by the ceding entity and as a liability by the assuming entity. The deposit shall be reported as an admitted asset by the ceding entity if (i) the assuming entity is licensed, accredited or otherwise qualified in the ceding entity’s state of domicile as described in Appendix A-
785 or (ii) there are funds held by or on behalf of the ceding entity as described in Appendix A-785;

b. Throughout the life of the agreement, receipts and disbursements shall be recorded through the deposit/liability accounts;

c. When individual case reserves are the basis for the deposit and the assuming entity pays in excess of the amount transferred by the ceding entity, the amount paid in excess of the deposit received shall be recognized as a loss by the assuming entity and as a gain by the ceding entity as Other Income in the statement of income;

d. When the agreement is completed, or when there is a loss payment in excess of the deposit, any difference between consideration and recoveries shall be recorded in the Other Income or Loss account as a loss to the reinsurer, and as a gain in the Other Income or Loss account by the reinsured;

e. With regard to bulk reserves, (i.e., IBNR) it shall be assumed that any cash transactions for the settlement of losses will reduce the asset/liability accounts by the amount of the cash transferred. When the remaining losses are revalued upward, an increase in the liability shall be recorded as a loss recognized by the assuming entity. Conversely, the ceding entity shall increase its deposit (asset) and outstanding loss liability;

f. No deduction shall be made from the loss and loss adjustment expense reserves on the ceding entity's balance sheet, schedules, and exhibits; and

g. The assuming entity shall record net consideration to be returned to the ceding entity as liabilities.

Assumed Reinsurance

35. Reinsurance premiums receivable at the end of the accounting period are combined with direct business receivables and reported as agents' balances or uncollected premiums. Where the ceding entity withholds premium funds pursuant to the terms of the reinsurance agreement, such assets shall be shown by the assuming entity as funds held by or deposited with reinsured companies.

36. Reinsurance premiums more than 90 days overdue shall be nonadmitted except (a) to the extent the assuming entity maintains unearned premium and loss reserves as to the ceding entity, under principles of offset accounting as discussed in SSAP No. 64, or (b) where the ceding entity is licensed and in good standing in assuming entity's state of domicile. Reinsurance premiums are due pursuant to the original contract terms (as the agreement stood on the date of execution). In the absence of a specific contract date, reinsurance premiums will be deemed due thirty (30) days after the date on which (i) notice or demand of premium due is provided to the ceding entity or (ii) the assuming entity books the premium (see SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers).

37. A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding entity and the transmittal of information and entry on the books of the assuming entity. Assuming companies shall estimate unreported premiums and related costs to the extent necessary to prevent material distortions in the loss development contained in the assuming entity's annual statement schedules where calendar year premiums are compared to accident year losses.
38. Proportional reinsurance (i.e., first dollar pro rata reinsurance) premiums shall be allocated to the appropriate annual statement lines of business in the Underwriting and Investment exhibits. Non-proportional assumed reinsurance premiums shall be classified as reinsurance under the appropriate subcategories.

39. Assumed retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in subparagraph 28 k.

40. Amounts payable by reinsurers on losses shall be classified as unpaid losses. Assumed reinsurance payable on paid losses shall be classified as a separate liability item on the balance sheet. IBNR losses on assumed reinsurance business shall be netted with ceded losses on the balance sheet and listed separately by annual statement line of business in the Underwriting and Investment exhibits.

Ceded Reinsurance

41. Ceded reinsurance premiums payable (net of ceding commission) shall be classified as a liability. Consistent with SSAP No. 64, ceded reinsurance premiums payable may be deducted from amounts due from the reinsurer, such as amounts due on assumed reinsurance, when a legal right of offset exists.

42. Amounts withheld by the ceding entity that would otherwise be payable under the reinsurance agreement shall be reported as funds held by entity under reinsurance treaties.

43. Ceded reinsurance transactions shall be classified in the annual statement line of business which relates to the direct or assumed transactions creating the cession or retrocession.

44. Ceded retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in subparagraph 28 k.

Adjustable Features/Retrospective Rating

45. Reinsurance treaties may provide for adjustment of commission, premium, or amount of coverage, based on loss experience. The accounting for common examples is outlined in the following paragraphs:

Commission Adjustments

46. An accrual shall be maintained for the following adjustable features based upon the experience recorded for the period:

   a. Contingent or Straight Profit—The reinsurer returns to the ceding entity a stipulated percentage of the profit produced by the business assumed from the ceding entity. Profit may be calculated for any specified period of time, but the calculation is often based on an average over a period of years; and

   b. Sliding Scale—A provisional rate of commission is paid over the course of the agreement, with a final adjustment based on the experience of the business ceded under the agreement.
Premium Adjustments

47. If the reinsurance agreement incorporates an obligation on the part of the ceding entity to pay additional premium to the assuming entity based upon loss experience under the agreement, a liability in the amount of such additional premium shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to pay such additional premium occur(s). The assuming entity shall recognize an asset in a consistent manner. If the reinsurance agreement incorporates an obligation on the part of the assuming entity to refund to the ceding entity any portion of the consideration received by the assuming entity based upon loss experience under the agreement, an asset in the amount of any such refund shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to make such refund occur(s). The initial provisional or deposit premium is recalculated retrospectively, based on loss experience under the agreement during a specified period of time; the calculation is often based on an average over a period of years. The assuming entity shall recognize a liability in a consistent manner.

Adjustments in the Amount of Coverage

48. The amount of coverage available for future periods is adjusted, upward or downward, based on loss experience under the agreement during a specified period of time. If the reinsurance agreement incorporates a provision under which the reinsurance coverage afforded to the ceding entity may be increased or reduced based upon loss experience under the agreement, an asset or a liability shall be recognized by the ceding entity in an amount equal to that percentage of the consideration received by the assuming entity which the increase or reduction in coverage represents of the amount of coverage originally afforded. The asset or liability shall be recognized during the accounting period in which the loss event(s) (or absence thereof) giving rise to the increase or decrease in reinsurance coverage occur(s), and shall be amortized over all accounting periods for which the increased or reduced coverage is applicable. The term “consideration” shall mean, for this purpose, the annualized deposit premium for the period used as the basis for calculating the adjustment in the amount of coverage to be afforded thereafter under the agreement.

Impairment

49. Include as a nonadmitted asset, amounts for accrued retrospective premiums on assumed business which represent 100% of the amount accrued (gross of ceded reinsurance) for any reinsured for which any agents’ balances or uncollected premiums are classified as nonadmitted.

Commissions

50. Commissions payable on reinsurance assumed business shall be included as an offset to Agents’ Balances or Uncollected Premiums. Commissions receivable on reinsurance ceded business shall be included as an offset to Ceded Reinsurance Balances Payable.

51. If the ceding commission paid under a reinsurance agreement exceeds the anticipated acquisition cost of the business ceded, the ceding entity shall establish a liability, equal to the difference between the anticipated acquisition cost and the reinsurance commissions received, to be amortized pro rata over the life of the reinsurance agreement.

Provision for Reinsurance

52. The NAIC Annual Statement Instructions for Property and Casualty Companies for Schedule F—Provision for Overdue Reinsurance, provide for a minimum reserve for uncollectible reinsurance with an additional reserve required if an entity’s experience indicates that a higher amount
should be provided. The minimum reserve Provision for Reinsurance is recorded as a liability and the change between years is recorded as a gain or loss directly to unassigned funds (surplus). Any reserve over the minimum amount shall be recorded on the statement of income by reversing the accounts previously utilized to establish the reinsurance recoverable.

53. The provision for reinsurance is calculated separately for unauthorized and authorized companies. An authorized reinsurer is licensed, accredited or approved by the ceding entity’s state of domicile; an unauthorized reinsurer is not so licensed, accredited or approved.

Disputed Items

54. Occasionally a reinsurer will question whether an individual claim is covered under a reinsurance agreement or may even attempt to nullify an entire agreement. A ceding entity, depending upon the individual facts, may or may not choose to continue to take credit for such disputed balances. A ceding entity shall take no credit whatsoever for reinsurance recoverables in dispute with an affiliate.

55. Items in dispute are those claims with respect to which the ceding entity has received formal written communication from the reinsurer denying the validity of coverage.

Uncollectible Reinsurance

56. Uncollectible reinsurance balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

Commutations

57. A commutation of a reinsurance agreement, or any portion thereof, is a transaction which results in the complete and final settlement and discharge of all, or the commuted portion thereof, present and future obligations between the parties arising out of the reinsurance agreement.

58. In commutation agreements, an agreed upon amount determined by the parties is paid by the reinsurer to the ceding entity. The ceding entity immediately eliminates the reinsurance recoverable recorded against the ultimate loss reserve and records the cash received as a negative paid loss. Any net gain or loss shall be reported in underwriting income in the statement of income.

59. The reinsurer eliminates a loss reserve carried at ultimate cost for a cash payout calculated at present value. Any net gain or loss shall be reported in underwriting income in the statement of income.

60. Commuted balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

National Flood Insurance Program

61. The National Flood Insurance Program was created by the Federal Emergency Management Agency (FEMA) and is designed to involve private insurers in a write-your-own (WYO) flood insurance program financially backed by FEMA at no risk to the insurer. To become a participating WYO entity, the entity signs a document with the Federal Insurance Administration (FIA) of the Federal Emergency Management Agency known as the Financial Assistance/Subsidy Arrangement.

62. Premium rates are set by FEMA. The WYO participating companies write the flood insurance coverage qualifying for the program on their own policies, perform their own underwriting, premium collections, claim payments, administration, and premium tax payments for policies written under the program.
63. Monthly accountings are made to FIA and participants draw upon FEMA letters of credit for deficiencies of losses, loss expenses, and administrative expenses in excess of premiums, subject to certain percentage limitations on expenses.

64. Balances due from or to FEMA shall be reported as ceded reinsurance balances receivable or payable.

Disclosures

65. Unsecured Reinsurance Recoverables:
   a. If the entity has with any individual reinsurers, authorized or unauthorized, an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium, that exceeds 3% of the entity’s policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer; and
   b. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting entity, and the total unsecured aggregate recoverables for the entire group.

66. Reinsurance Recoverables in Dispute—Reinsurance recoverable on paid and unpaid (including IBNR) losses in dispute by reason of notification, arbitration or litigation shall be identified if the amounts in dispute from any entity (and/or affiliate) exceed 5% of the ceding entity’s policyholders surplus or if the aggregate of all disputed items exceeds 10% of the ceding entity’s policyholders surplus. Notification means a formal written communication from a reinsurer denying the validity of coverage.

67. Uncollectible Reinsurance—Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):
   a. Losses incurred;
   b. Loss adjustment expenses incurred;
   c. Premiums earned; and
   d. Other.

68. Commutation of Ceded Reinsurance—Describe commutation of ceded reinsurance during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):
   a. Losses incurred;
   b. Loss adjustment expenses incurred;
   c. Premiums earned; and
   d. Other.

69. Retroactive Reinsurance—The table illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under Retroactive Reinsurance in the Notes to Financial Statements section shall be completed for all retroactive reinsurance agreements that transfer liabilities for losses that have already occurred and that will generate special surplus transactions. The insurer (assuming or
ceding) shall assign a unique number to each retroactive reinsurance agreement and shall utilize this number for as long as the agreement exists. Transactions utilizing deposit accounting shall not be reported in this note.

70. Reinsurance Assumed and Ceded—The tables illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under “Reinsurance Assumed and Ceded in the Notes to Financial Statements” section shall be completed as follows:

   a. The financial statements shall disclose the maximum amount of return commission which would have been due reinsurers if all reinsurance were canceled with the return of the unearned premium reserve; and

   b. The financial statements shall disclose the accrual of additional or return commission, predicated on loss experience or on any other form of profit sharing arrangements as a result of existing contractual arrangements.

71. A specific interrogatory requires information on reinsurance of risk accompanied by an agreement to release the reinsurer from liability, in whole or in part, from any loss that may occur on the risk or portion thereof.

72. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

73. This statement adopts FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts (FAS 113) with modification and FASB Emerging Issues Task Force No. 93-6, Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises with modification for the following:

   a. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be reported as a contra-liability netted against the liability for gross losses and loss adjustment expenses;

   b. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of unearned premiums;

   c. The gain created by a retroactive reinsurance agreement because the amount paid to the reinsurer is less than the gross liabilities for losses and loss adjustment expenses ceded to the reinsurer is reported in the statement of income as a write-in gain in other income by the ceding entity and a write-in loss by the assuming entity. The gain created by a retroactive reinsurance agreement is restricted as a special surplus account until the actual retroactive reinsurance recovered is in excess of the consideration paid;

   d. This statement requires that a liability be established through a provision reducing unassigned funds (surplus) for unsecured reinsurance recoverables from unauthorized reinsurers and for certain overdue balances due from authorized reinsurers;

   e. Some reinsurance agreements contain adjustable features that provide for adjustment of commission, premium or amount of coverage, based on loss experience. This statement requires that the asset or liability arising from the adjustable feature be computed based on experience to date under the agreement, and the impact of early termination may only be considered at the time the agreement has actually been terminated;
f. Structured settlements are addressed in SSAP No. 65—Property and Casualty Contracts. Statutory accounting and FAS 113 are consistent in accounting for structured settlement annuities where the reporting entity is the owner and payee, and where the claimant is the payee and the reporting entity has been released from its obligation. FAS 113 distinguishes structured settlement annuities where the claimant is the payee and a legally enforceable release from the reporting entity’s liability is obtained from those where the claimant is the payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the reporting entity has not been released from its obligation; and

g. This statement requires that reinsurance recoverables on unpaid losses and loss adjustment expenses be presented as a contra-liability. Requirements for offsetting and netting are addressed in SSAP No. 64.

74. This statement rejects AICPA Statement of Position No. 92-5, Accounting for Foreign Property and Liability Reinsurance.

Effective Date and Transition

75. This statement shall apply to:

a. Reinsurance agreements entered into, renewed, or amended on or after January 1, 1994. An amendment is any revision or adjustment of contractual terms. The payment of premiums or reimbursement of losses recoverable under the agreement shall not constitute an amendment; and

b. Reinsurance agreements in force on January 1, 1995 which cover losses occurring or claims made on or after that date on policies reinsured under such agreements.

76. The guidance shall not apply to:

a. Reinsurance agreements which cover only losses occurring or claims made before January 1, 1994 and which were entered into before January 1, 1994, and were not subsequently renewed or amended; and

b. Reinsurance agreements that expired before, and were not renewed or amended after, January 1, 1995.

77. The guidance in paragraphs 45 through 49 shall be effective for all accounting periods beginning on or after January 1, 1996, and shall apply to reinsurance agreements entered into, renewed or amended on or after January 1, 1994.

78. This statement is effective for years beginning January 1, 2001. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

CLASSIFYING REINSURANCE CONTRACTS

Was the contract entered into, renewed, amended, or does the contract have an anniversary date (i.e., multi-year contract) during or after 1994?

Yes

Has the reinsurer assumed significant insurance risk, both as to timing of risk (including timely reimbursement) and amount of insurance loss under the reinsured portions of the underlying contracts?

No

The contract would be “grandfathered” and accounted for in accordance with Chapter 22 of the NAIC Accounting Practices and Procedures Manual for Property/Casualty Insurance Companies dated January 1992

Yes

Is it reasonably possible that the reinsurer may realize a significant loss from the transaction?

No

Has the reinsurer assumed substantially all of the risk relating to the reinsured portion of the underlying contract (i.e., the reinsurer is in the same economic position as the reinsured)?

Yes

The contract has transferred risk and should be accounted for as reinsurance in accordance with SSAP No. 62

No

The contract has not transferred risk and should be accounted for as a deposit. Any previously recognized gains and losses should not be restated, and existing balances should be reclassified as deposits.

Does the contract only reinsure losses from insured events that may occur after the date the contract is entered into?

Yes

Account for the contract as a prospective reinsurance.

No

Does the contract only reinsure losses from insured events that occurred prior to the date the contract is entered into?

Yes

Account for the contract as a retroactive reinsurance.

No

Is it practicable to identify and account separately for the prospective and retroactive portions of a blended contract?

Yes

Account for the prospective and retroactive components separately.
SSAP NO. 62—EXHIBIT A

Implementation Questions and Answers

Applicability

1. Q: The accounting practices in SSAP No. 62 specify the accounting and reporting for reinsurance contracts. What contracts are considered reinsurance contracts for purposes of applying these accounting practices?

   A: Any transaction that indemnifies an insurer against loss or liability relating to insurance risk shall be accounted for in accordance with the accounting practices included in SSAP No. 62. Therefore, all contracts, including contracts that may not be structured or described as reinsurance, shall be accounted for as reinsurance when those conditions are met.

2. Q: The provisions of this statement will apply to (a) reinsurance contracts entered into, renewed or amended on or after January 1, 1994, and (b) any other reinsurance contracts that are in force on January 1, 1995 and cover insurable events on the underlying insurance policies that occur on or after that date. What contracts would be exempt from the new accounting rules included in SSAP No. 62?

   A: The only exempt contracts are:

   1) Purely retroactive reinsurance contracts that cover only insured events occurring before January 1, 1994, provided those contracts were entered into before that date and are not subsequently amended. and

   2) Contracts that expired before January 1, 1995 and are not amended after that date.

3. Q: This statement is to be applied to contracts which are amended on or after January 1, 1994. What if the change in terms is not significant, or the terms changed have no financial effect on the contract?

   A: In general, the term *amendment* should be viewed broadly to include all but the most trivial changes. Examples of amendments include, but are not limited to, replacing one assuming entity with another (including an affiliated entity), or modifying the contract’s limit, coverage, premiums, commissions, or experience-related adjustable features. No distinction is made between financial and non-financial terms.

4. Q: Must the accounting provisions of SSAP No. 62 be applied to an otherwise exempt contract if the ceding entity pays additional premiums under the contract on or after January 1, 1994?

   A: The answer depends on why the additional premiums are paid. If the additional premiums are the result of a renegotiation, adjustment, or extension of terms, the contract is subject to the accounting provisions of SSAP No. 62. However, additional premiums paid without renegotiation, adjustment, or extension of terms would not make an otherwise exempt contract subject to those provisions.

5. Q: Prospective and retroactive portions of a reinsurance contract are allowed to be accounted for separately, if practicable. Can the retroactive portion of an existing contract be segregated and therefore exempted with other retroactive contracts covering insured events occurring prior to January 1, 1994?
A: No. The transition provisions apply to an entire contract, which is either subject to or exempt from the revised provisions of SSAP No. 62. A ceding entity may bifurcate a contract already subject to the new accounting rules in SSAP No. 62 and then account for both the prospective and retroactive portions in accordance with the new accounting standard.

Risk Transfer

6. Q: Do the new risk transfer provisions apply to existing contracts?

A: Yes, the new risk transfer provisions apply to some existing contracts. SSAP No. 62 applies in its entirety only to existing contracts which were renewed or amended on or after January 1, 1994 or which cover losses occurring or claims made after that date. Therefore those contracts must be evaluated to determine whether they transfer risk and qualify for reinsurance accounting. For accounting periods commencing on or after January 1, 1995 balances relating to such contracts which do not transfer insurance risk shall be reclassified as deposits and shall be accounted for and reported in the manner described under the caption Reinsurance Contracts Must Include Transfer of Risk.

SSAP No. 62 does not apply to existing contracts which were entered into before, and were not renewed or amended on or after, January 1, 1994 and which cover only losses occurring or claims made before that date, nor to contracts which expired before, and were not renewed or amended on or after, January 1, 1995. Those contracts will continue to be accounted for in the manner provided by SSAP No. 62 before these revisions.

7. Q: How does the effective date affect the assessment of whether a significant loss to the reinsurer was reasonably possible?

A: The risk transfer assessment is made at contract inception, based on facts and circumstances known at the time. Because that point in time has passed for existing contracts, some have suggested that the risk transfer provisions be applied as of the effective date. However, that approach to the risk transfer assessment would violate the requirement to consider all cash flows from the contract. Therefore, the test must be applied from contract inception, considering the effect of any subsequent contract amendments. Careful evaluation and considered judgment will be required to determine whether a significant loss to the reinsurer was reasonably possible at inception.

8. Q: Should risk transfer be reassessed if contractual terms are subsequently amended?

A: Yes. When contractual terms are amended, risk transfer should be reassessed. For example, a contract that upon inception met the conditions for reinsurance accounting could later be amended so that it no longer meets those conditions. The contract should then be reclassified and accounted for as a deposit.

9. Q: How should the risk transfer assessment be made when a contract has been amended?

A: No particular method is prescribed for assessing risk transfer in light of a contract amendment. Whether an amended contract in substance transfers risk must be determined considering all of the facts and circumstances in light of the risk transfer requirements. Judgment also will be required to determine whether an amendment in effect creates a new contract.

10. Q: For purposes of evaluating whether a contract with a reinsurer transfers risk, what constitutes a contract?
A: A contract is not defined, but is essentially a question of substance. It may be difficult in some circumstances to determine the boundaries of a contract. For example, the profit-sharing provisions of one contract may refer to experience on other contracts and, therefore, raise the question of whether, in substance, one contract rather than several contracts exist.

The inconsistency that could result from varying interpretations of the term contract is limited by requiring that features of the contract or other contracts or agreements that directly or indirectly compensate the reinsurer or related reinsurers for losses be considered in evaluating whether a particular contract transfers risk. Therefore, if agreements with the reinsurer or related reinsurers, in the aggregate, do not transfer risk, the individual contracts that make up those agreements also would not be considered to transfer risk, regardless of how they are structured.

11. Q: If the assessment of risk transfer changes after the initial assessment at contract inception, how should the ceding entity account for the change?

A: The status of a contract should be determinable at inception and, absent amendment, subsequent changes should be very rare. If the risk of significant loss was not deemed reasonably possible at inception, and a significant loss subsequently occurred, the initial assessment was not necessarily wrong, because remote events do occur. Likewise, once a reasonable possibility of significant loss has been established, such loss need not occur in order to maintain the contract's status as reinsurance.

12. Q: SSAP No. 62 requires that reasonably possible outcomes be evaluated to determine the reinsurer's exposure to significant loss. What factors should be considered in determining whether a scenario being evaluated is reasonably possible?

A: The term reasonably possible means that the probability is more than remote. The test is applied to a particular scenario, not to the individual assumptions used in the scenario. Therefore, a scenario is not reasonably possible unless the likelihood of the entire set of assumptions used in the scenario occurring together is reasonably possible.

13. Q: In determining the amount of the reinsurer's loss under reasonably possible outcomes, may cash flows directly related to the contract other than those between the ceding and assuming companies, such as taxes and operating expenses of the reinsurer, be considered in the calculation?

A: No. The evaluation is based on the present value of all cash flows between the ceding and assuming enterprises under reasonably possible outcomes, and therefore, precludes considering other expenses of the reinsurer in the calculation.

14. Q: In evaluating the significance of a reasonably possible loss should the reasonably possible loss be compared to gross or net premiums?

A: Gross premiums should be used.

15. Q: How does a commutation clause affect the period of time over which cash flows are evaluated for reasonable possibility of significant loss to the reinsurer?

A: All cash flows are to be assessed under reasonably possible outcomes. Therefore, unless commutation is expected in the scenario being evaluated, it should not be assumed in the calculation. Further, the assumptions used in a scenario must be internally consistent and economically rational in order for that scenario's outcome to be considered reasonably possible.
16. Q: What interest rate should be used in each evaluated scenario to make the present value calculation?

   A: A reasonable and appropriate rate is required, which generally would reflect the expected timing of payments to the reinsurer and the duration over which those cash flows are expected to be invested by the reinsurer.

17. Q: SSAP No. 62 refers to payment schedules and accumulating retentions from multiple years as features that delay timely reimbursement of claims. Does the presence of those features generally prevent a contract from meeting the conditions for reinsurance accounting?

   A: Yes. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer’s payments to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurer’s reimbursement to the ceding entity should be closely scrutinized.

18. Q: What if a contract contains a feature such as a payment schedule or accumulating retention but could still result in the reasonable possibility of significant loss to the reinsurer?

   A: Both of the following conditions are required for reinsurance accounting:

   a. Transfer of significant risk arising from uncertainties about both (i) the ultimate amount of net cash flows from premiums, commission, claims, and claim settlement expenses paid under a contract (underwriting risk) and (ii) the timing of the receipt and payment of those cash flows (timing risk); and

   b. Reasonable possibility of significant loss to the reinsurer.

   Because both condition (a) and condition (b) must be met, failure to transfer significant timing and underwriting risk is not overcome by the possibility of significant loss to the reinsurer.

19. Q: Is it permissible to evaluate timely reimbursement on a present value basis?

   A: No. The word timely is used in the ordinary temporal sense to refer to the length of time between payment of the underlying reinsured claims and reimbursement by the reinsurer.

   While the test for reasonable possibility of significant loss to the reinsurer provides for a present value-based assessment of the economic characteristics of the reinsurance contract, the concept of timely reimbursement relates to the transfer of insurance risk (condition a above), not the reasonable possibility of significant loss (condition b above). Accordingly, timely reimbursement should be evaluated based solely on the length of time between payment of the underlying reinsured losses and reimbursement by the reinsurer.

20. Q: Are there any circumstances under which the conditions for risk transfer need not be met?

   A: Yes. An extremely narrow and limited exemption is provided for contracts that reinsure either an individual risk or an underlying book of business that is inherently profitable. When substantially all of the insurance risk relating to the reinsured portions of the underlying insurance contracts has been assumed by the reinsurer, the contract meets the conditions for reinsurance accounting.
To qualify under this exception, no more than trivial insurance risk on the reinsured portions of the underlying insurance contracts may be retained by the ceding entity. The reinsurer’s economic position must be virtually equivalent to having written the relevant portions of the reinsured contracts directly.

21. Q: In determining whether a reinsurance contract qualifies under the exception referred to in the preceding question, how should the economic position of the reinsurer be assessed in relation to that of the ceding entity?

A: The assessment should be made by comparing the net cash flows of the reinsurer under the reinsurance contract with the net cash flows of ceding entity on the reinsured portions of the underlying insurance contracts. This may be relatively easy for reinsurance of individual risks or for unlimited-risk quota-share reinsurance, because the premiums and losses on these types of reinsurance generally are the same as the premiums and losses on the reinsured portions of the underlying insurance policies.

In other types of reinsurance, determining the reinsurer’s net cash flows relative to the insurer is likely to be substantially more difficult. For example, it generally would be difficult to demonstrate that the ceding entity’s premiums and losses for a particular layer of insurance are the same as the reinsurer’s premiums and losses related to that layer. If the economic position of the reinsurer relative to the insurer cannot be determined, the contract would not qualify under the exception.

Accounting Provisions

22. Q: An existing contract that was accounted for as reinsurance no longer qualifies for reinsurance accounting under the new accounting rules included in SSAP No. 62. How should the ceding and assuming companies account for the contract in future periods?

A: Because the statement of income cannot be restated, previously recognized gains and losses are not revised. If the contract was entered into before, and not renewed or amended on or after, January 1, 1994 and covers only losses occurring or claims made before that date, or the contract expired before January 1, 1995 and was not renewed or amended on or after that date, it would continue to be accounted for in the manner provided before these revisions.

For accounting periods commencing on or after January 1, 1995, existing balances relating to contracts which do not transfer insurance risk and which were entered into on or after January 1, 1994 (covering losses occurring or claims made after that date) would be reclassified as deposits.

Premium payments to a reinsurer would be recorded as deposits. Likewise, losses recoverable from a reinsurer would not be recognized as receivables. Rather, any reimbursement for losses would be accounted for upon receipt as a refund of a deposit.

23. Q: What is the definition of past insurable events that governs whether reinsurance coverage is prospective or retroactive? For example, could a reinsurance contract that covers losses from asbestos and pollution claims on occurrence-based insurance policies effective during previous periods be considered prospective if the reinsurance coverage is triggered by a court interpretation that a loss is covered within the terms of the underlying insurance policies?

A: The distinction between prospective and retroactive reinsurance is based on whether a contract reinsures future or past insured events covered by the underlying reinsurance contracts. In the example above, the insured event is the occurrence of loss within the coverage of the underlying
insurance contracts, not the finding of a court. Therefore, the fact that the asbestos exposure or pollution is covered under insurance policies effective during prior periods makes the reinsurance coverage in this example retroactive.

24. Q: Would the answer to the above question change if the reinsurance were written on a claims-made basis?

A: No. The form of the reinsurance—whether claims-made or occurrence-based—does not determine whether the reinsurance is prospective or retroactive. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance contract is a retroactive contract.

25. Q: What is the effect of adjustments to future premiums or coverage in determining whether reinsurance is prospective or retroactive?

A: Adjustments to future premiums or coverage may affect the accounting for a reinsurance contract. Whenever an adjustment results in a reinsurer providing new or additional coverage for past insurable events, that coverage is retroactive. For example, if subsequent years’ premiums under a multiple accident year contract create additional coverage for previous accident years, the additional coverage is retroactive, even if the original coverage provided in the contract for those accident years was prospective. Likewise, if current losses under a multiple-year contract eliminate coverage in future periods, some or all of the premiums to be paid in those future periods should be charged to the current period.

26. Q: A reinsurance contract is entered into after the contract’s effective date. Is the coverage between the contract’s effective date and the date the contract was entered into prospective or retroactive?

A: The portion of the contract related to the period of time between the effective date of the contract and the date the contract was entered into is retroactive because it covers insured events that occurred prior to entering into the reinsurance contract.

27. Q: How is the date the reinsurance contract was entered into determined?

A: It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the contract is substantively prospective must be determined based on the facts and circumstances. For example, a contract may be considered to have been substantively entered into even though regulatory approval of that contract has not taken place.

The absence of agreement on significant terms, or the intention to establish or amend those terms at a later date based on experience or other factors, generally indicates that the parties to the contract have not entered into a reinsurance contract, but rather have agreed to enter into a reinsurance contract at a future date. If contractual provisions under a contract substantively entered into at a future date covered insurable events prior to that date, that coverage is retroactive.

In any event, SSAP No. 62 provides that if a contract (except facultative contracts and contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date it is presumed to be retroactive.
28. Q: Are contracts to reinsure calendar-year incurred losses considered blended contracts that have both prospective and retroactive elements?

A: Yes. Most reinsurance contracts covering calendar-year incurred losses combine coverage for insured events that occurred prior to entering into the reinsurance contract with coverage for future insured events and, therefore, include both prospective and retroactive elements.

In any event, SSAP No. 62 provides that if a contract (except facultative contracts, contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date it is presumed retroactive.

29. Q: When the prospective and retroactive portions of a contract are being accounted for separately, how should premiums be allocated to each portion of the contract?

A: No specific method for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of a contract is required. However, separate accounting for the prospective and retroactive portions of a contract may take place only when an allocation is practicable.

Practicability requires a reasonable basis for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of the contract, considering all amounts paid or deemed to have been paid regardless of the timing of payment. If a reasonable basis for allocating the premiums between the prospective and retroactive coverage does not exist, the entire contract must be accounted for as a retroactive contract.

30. Q: A retroactive reinsurance contract contains a cut-through provision that provides the ceding entity’s policyholders and claimants with the right to recover their claims directly from the reinsurer. May the ceding entity immediately recognize earned surplus associated with this type of contract?

A: No. SSAP No. 62 states that earned surplus may not be recognized “until the actual retroactive reinsurance recovered exceeds the consideration paid”.

31. Q: A ceding entity enters into a retroactive reinsurance agreement that gives rise to segregated surplus. If the reinsurer prepays its obligation under the contract, may the ceding entity recognize earned surplus at the time the prepayment is received?

A: Segregated surplus arising from retroactive reinsurance transactions is earned as actual liabilities that have been transferred are recovered or terminated. Therefore, earned surplus is based on when the reinsurer settles its obligations to the ceding entity, and it may be appropriate to recognize earned surplus at the time the prepayment is received.

However, all of the facts and circumstances must be considered to determine whether the ceding entity has substantively recovered the liabilities transferred to the reinsurer. For example, if the ceding entity agrees to compensate the reinsurer for the prepayment, such as by crediting the reinsurer with investment income on prepaid amounts or balances held, the ceding entity has not, in substance, recovered its transferred liabilities but rather has received a deposit from the reinsurer that should be accounted for accordingly.
32. Q: If the ceding entity does not expect to receive any recoveries because the reinsurer has agreed to reimburse claimants under the reinsured contracts directly, would the ceding entity be considered to have recovered or terminated its transferred liabilities?

A: No. In the example given, the reinsurer is substantively acting as disbursing agent for the ceding entity. Therefore, the ceding entity cannot be said to have recovered amounts due from the reinsurer before payment is made to the claimant.

33. Q: What accounting entries would a ceding entity make to report a retroactive reinsurance contract?

A: Accounting Entries for a Ceding Entity to Report a Retroactive Reinsurance Contract:

**Entry 1**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Retroactive Reinsurance Reserves</td>
<td>10,000</td>
</tr>
<tr>
<td>Ceded or Assumed (B/S)</td>
<td></td>
</tr>
<tr>
<td>Retroactive Reinsurance Gain (I/S)</td>
<td>2,000</td>
</tr>
<tr>
<td>Cash</td>
<td>8,000</td>
</tr>
</tbody>
</table>

To record initial portfolio transfer see items #3 and #8. The ceding entity must establish the segregated surplus per item #4.

**Entry 1A**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Retro. Reins. Gain</td>
<td>2,000</td>
</tr>
<tr>
<td>Profit/Loss Account</td>
<td></td>
</tr>
</tbody>
</table>

To close gain from retroactive transaction.

**Entry 1B**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profit/Loss Account</td>
<td>2,000</td>
</tr>
<tr>
<td>Special Surplus from Retro. Reins.</td>
<td>2,000</td>
</tr>
</tbody>
</table>

To close profit from retroactive reinsurance to special surplus.

**Entry 2**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash</td>
<td>2,000</td>
</tr>
<tr>
<td>Retroactive Reinsurance Reserves</td>
<td></td>
</tr>
<tr>
<td>Ceded or Assumed (B/S)</td>
<td>2,000</td>
</tr>
</tbody>
</table>

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $8,000, and, special surplus from retroactive reinsurance account equals $2,000, therefore segregated surplus account is not changed per item #10.

**Entry 3**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Retroactive Reinsurance Reserves</td>
<td></td>
</tr>
<tr>
<td>Ceded or Assumed (B/S)</td>
<td>3,000</td>
</tr>
<tr>
<td>Retroactive Reinsurance Gain (I/S)</td>
<td>3,000</td>
</tr>
</tbody>
</table>

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is increased to $5,000 as a result of this upward development.
SSAP No. 62
Statement of Statutory Accounting Principles

Entry 3A

Retro. Reinsurance Gain 3,000
Profit/Loss Account 3,000

To close profit from retroactive reinsurance.

Entry 3B

Profit/Loss (I/S) 3,000
Special Surplus from Retro. Reins. 3,000

To close profit and loss account to special surplus. (Retroactive reinsurance reserves ceded or assumed account balance equals $11,000. Special Surplus from retro. reins. balance equals $5,000.)

Entry 4

Cash 4,000
Retroactive Reinsurance Reserves Ceded or Assumed (B/S) 4,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $7,000, therefore segregated surplus account is not changed per item #10.

Entry 5

Cash 3,000
Retroactive Reinsurance Reserves Ceded or Assumed (B/S) 3,000

To record recovery of paid losses from reinsurer. Outstanding ceded reserves after recovery equals $4,000, therefore the following entry is needed per items #6 and #10.

Entry 5A

Special Surplus—Retro. Reins. 1,000
Unassigned Funds 1,000

Retroactive Reinsurance reserves ceded or assumed after this entry equals $4,000.

Entry 6

Retroactive Reinsurance Loss (I/S) 1,000
Retroactive Reinsurance Reserves Ceded or Assumed (B/S) 1,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is decreased as a result of this downward development to $3,000. The following entry is needed per items #6 and #10.
Entry 6A

<table>
<thead>
<tr>
<th>Account</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profit/Loss Account</td>
<td>1,000</td>
<td></td>
</tr>
<tr>
<td>Retro. Reins. Loss</td>
<td></td>
<td>1,000</td>
</tr>
</tbody>
</table>

To close loss to profit and loss account.

Entry 6B

<table>
<thead>
<tr>
<th>Account</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Special Surplus from Retro. Reins.</td>
<td>1,000</td>
<td></td>
</tr>
<tr>
<td>Profit/Loss Account</td>
<td></td>
<td>1,000</td>
</tr>
</tbody>
</table>

To close profit and loss account to special surplus. (Remaining balance of retroactive reinsurance reserve ceded or assumed account equals $3,000.) (Special surplus from retro. reins. account balance equals $3,000.)

Entry 7

<table>
<thead>
<tr>
<th>Account</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash</td>
<td>2,500</td>
<td></td>
</tr>
<tr>
<td>Retroactive Reinsurance Gain (I/S)</td>
<td>500</td>
<td></td>
</tr>
<tr>
<td>Retroactive Reinsurance Reserves Ceded or Assumed (B/S)</td>
<td>3,000</td>
<td></td>
</tr>
</tbody>
</table>

Entry 7A

<table>
<thead>
<tr>
<th>Account</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profit and Loss Account</td>
<td>500</td>
<td></td>
</tr>
<tr>
<td>Retro. Reins. Gain</td>
<td></td>
<td>500</td>
</tr>
</tbody>
</table>

To close other income to profit and loss account.

Entry 7B

<table>
<thead>
<tr>
<th>Account</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Special Surplus from Retro. Reins.</td>
<td>500</td>
<td></td>
</tr>
<tr>
<td>Profit/Loss Account</td>
<td></td>
<td>500</td>
</tr>
</tbody>
</table>

To close profit and loss account to special surplus. (Remaining balance of special surplus from retro. reins. account equals $2,500.) (Remaining balance of retroactive reinsurance reserve ceded or assumed account -0-.)

Entry 7C

<table>
<thead>
<tr>
<th>Account</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Special Surplus from Retro. Reins.</td>
<td>2,500</td>
<td></td>
</tr>
<tr>
<td>Unassigned Funds</td>
<td></td>
<td>2,500</td>
</tr>
</tbody>
</table>

To close remaining special surplus account to unassigned surplus.
Statement of Statutory Accounting Principles No. 63

Underwriting Pools and Associations Including Intercompany Pools

Status

Type of Issue: Common Area

Issued: Initial Draft

Effective Date: January 1, 2001

Affects: No other pronouncements

Affected by: No other pronouncements

SCOPE OF STATEMENT........................................................................................................................................3

Disclosures ..........................................................................................................................................................4
Effective Date and Transition ............................................................................................................................4
RELEVANT ISSUE PAPERS .................................................................................................................................5
Underwriting Pools and Associations Including Intercompany Pools

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for underwriting pools and associations.

SUMMARY CONCLUSION

2. Underwriting pools and associations can be categorized as follows: (a) involuntary, (b) voluntary, and (c) intercompany.

3. Involuntary pools represent a mechanism employed by states to provide insurance coverage to those with higher than average probability of loss who otherwise would be excluded from obtaining coverage. Reporting entities are generally required to participate in the underwriting results, including premiums, losses, expenses, and other operations of involuntary pools, based on their proportionate share of similar business written in the state. Involuntary plans are also referred to as residual market plans, involuntary risk pools, and mandatory pools.

4. Voluntary pools are similar to involuntary pools except they are not state mandated and a reporting entity participates in the pool voluntarily. In addition, voluntary pools are not limited to the provision of insurance coverage to those with higher than average probability of loss, but often are used to provide greater capacity for risks with exceptionally high levels of insurable values (e.g., aircraft, nuclear power plants, refineries, and offshore drilling platforms).

5. Intercompany pooling relates to business which is pooled among affiliated entities who are party to a pooling arrangement.

6. Participation in a pool may be on a joint and several basis, i.e., in addition to a proportional share of losses and expenses incurred by the pool, participants will be responsible for their share of any otherwise unrecoverable obligations of other pool participants. In certain instances, one or more entities may be designated as servicing carriers for purposes of policy issuance, claims handling, and general administration of the pooled business, while in other cases a pool manager or administrator performs all of these functions and simply bills pool participants for their respective shares of all losses and expenses incurred by the pool. In either case, liabilities arising from pooled business are generally incurred on a basis similar to those associated with non-pooled business, and should therefore be treated in a manner consistent with the guidelines set forth in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5).

7. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares. In these arrangements, only the policy issuing entity has direct liability to its policyholders or claimants; other pool participants are liable as reinsurers for their share of the issuing entity’s obligations. Although participants may use different assumptions (e.g., discount rates) in recording transactions, the timing of recording transactions shall be consistently applied by all participants.

8. Underwriting results shall be accounted for on a gross basis whereby the participant’s portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business, premiums shall be recorded as directly written and accounted for in the same manner as other business which is
directly written by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

9. Equity interests in, or deposits receivable from, a pool represent cash advances to provide funding for operations of the pool. These are admitted assets and shall be recorded separately from receivables and payables related to a pool’s underwriting results. Receivables and payables related to underwriting results shall be accounted for in accordance with the guidance in paragraphs 6 to 8, above. If it is probable that these receivables are uncollectible, any uncollectible amounts shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible but is not written off, disclosure requirements outlined in SSAP No. 5 shall be followed.

Disclosures

10. If a reporting entity is part of a group of affiliated entities which utilizes a pooling arrangement under which the pool participants cede substantially all of their direct and assumed business to the pool, the financial statements shall include:

a. A description of the basic terms of the arrangement and the related accounting;

b. Identification of the lead entity and of all affiliated entities participating in the intercompany pool (include NAIC Company Codes) and indication of their respective percentage shares of the pooled business;

c. Description of the lines and types of business subject to the pooling agreement;

d. Description of cessions to non-affiliated reinsurers of business subject to the pooling agreement, and indication of whether such cessions were prior to or subsequent to the cession of pooled business from the affiliated pool members to the lead entity;

e. Identification of all pool members which are parties to reinsurance agreements with non-affiliated reinsurers covering business subject to the pooling agreement and which have a contractual right of direct recovery from the non-affiliated reinsurer per the terms of such reinsurance agreements;

f. Explanation of any discrepancies between entries regarding pooled business on the assumed and ceded reinsurance schedules of the lead entity and corresponding entries on the assumed and ceded reinsurance schedules of other pool participants;

g. Description of intercompany sharing, if other than in accordance with the pool participation percentage, of the Provision for Reinsurance (Schedule F, Part 7) and the write-off of uncollectible reinsurance.

11. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

12. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Offsetting and Netting of Assets and Liabilities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for offsetting and netting of assets and liabilities.

SUMMARY CONCLUSION

2. Assets and liabilities shall be offset and reported net only when a valid right of setoff exists except as provided for in paragraphs 3 and 4. A right of setoff is a reporting entity's legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying an amount that the other party owes to the reporting entity against the debt. A valid right of setoff exists only when all the following conditions are met:

   a. Each of the two parties owes the other determinable amounts. An amount shall be considered determinable for purposes of this provision when it is reliably estimable by both parties to the agreement;

   b. The reporting party has the right to setoff the amount owed with the amount owed by the other party;

   c. The reporting party intends to setoff; and

   d. The right of setoff is enforceable by law.

3. Assets and liabilities that meet the criteria for offset shall not be netted when prohibited by specific statements of statutory accounting principles. An example of such is in the case of reinsurance recoverables on paid losses and ceded premiums payable as provided for in SSAP No. 62—Property and Casualty Reinsurance.

4. Netting of assets and liabilities for reporting purposes when no valid right of setoff exists shall be allowed only when provided for by specific statements of statutory accounting principles. An example of such is in the case of real estate investments required to be shown net of encumbrances as provided for in SSAP No. 40—Real Estate Investments.

5. Amounts due to or from affiliates shall be offset and reported net only when the provisions of paragraph 2 above are met.

Relevant Literature

6. This statement adopts paragraphs 1, 7 and 13 of APB Opinion No. 10, Omnibus Opinion—1966 and FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts with a modification to prohibit offsetting as provided in specific statements and require netting when provided in specific statements. This statement adopts FASB Interpretation No. 41, Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements.

7. This statement adopts FASB Emerging Issues Task Force No. 86-25, Offsetting Foreign Currency Swaps.
Effective Date and Transition

8. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Property and Casualty Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty insurance contracts. To the extent a topic is not covered by this statement, accounting guidance shall comply with the more general codified guidance.

2. Topics specific to title insurance, mortgage guaranty insurance, and financial guaranty insurance are not within the scope of this statement. These topics are addressed in SSAP No. 57—Title Insurance, SSAP No. 58—Mortgage Guaranty Insurance, and SSAP No. 60—Financial Guaranty Insurance.

SUMMARY CONCLUSION

3. Property and casualty insurance contracts can be written to cover insured events on the following reporting bases:
   a. Occurrence—These policies cover insured events that occur within the effective dates of the policy regardless of when they are reported to the reporting entity. Liabilities for losses on these policies shall be recorded when the insured event occurs;
   b. Claims made—These policies cover insured events that are reported (as defined in the policy) within the effective dates of the policy, subject to retroactive dates when applicable. Liabilities for losses on these policies shall be recorded when the event is reported to the reporting entity; and
   c. Extended reporting—Endorsements to claims made policies covering insured events reported after the termination of a claims made contract but subject to the same retroactive dates where applicable. See paragraphs 7 and 8 for guidance for when premium shall be earned and losses shall be recorded.

Claims Made Policies

4. Normally, when claims made coverage is obtained, existing coverage is being replaced. The existing coverage may have been a claims made policy or an occurrence policy. In either case, in an effort to reduce premium costs, the insured may request that the claims made coverage cover only claims reported within the effective dates of the policy that occur after a specified date. This specified date is referred to as the retroactive date of the claims made policy and eliminates duplicate coverage when converting from occurrence coverage to claims made coverage.

5. The liability for an insured event shall be determined in accordance with SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses (SSAP No. 55).

6. Extended reporting endorsements, commonly referred to as tail coverage, allow extended reporting of insured events after the termination of a claims made contract. Extended reporting endorsements modify the exposure period of the underlying contract and can be for a defined period (e.g., six months, one year, five years) or can be for an indefinite period.

7. When a reporting entity issues an extended reporting endorsement or contract and the preceding claims made policy terminates, the reporting entity assumes liability for unreported claims and expense. This extended reporting coverage can be issued for an indefinite period or a fixed period. For indefinite reporting periods, premium shall be fully earned and loss and expense liability associated with
unreported claims shall be recognized immediately. For coverage for a fixed period, premium shall be earned over the term of the fixed period, the reporting entity shall establish an unearned premium reserve for the unexpired portion of the premium and shall record losses as reported.

8. Some claims made policies provide extended reporting coverage at no additional charge in the event of death, disability, or retirement of a natural person insured. In such instance, a policy reserve is required to assure that premiums are not earned prematurely. The amount of the reserve should be adequate to pay for all future claims arising from these coverage features, after recognition of future premiums to be paid by current insureds for these benefits. The reserve, entitled "extended reporting endorsement policy reserve" shall be classified as a component part of the unearned premium reserve considered to run more than one year from the date of the policy.

9. When the anticipated losses, loss adjustment expenses, and maintenance costs anticipated to be reported during the extended reporting period, exceed the recorded unearned premium reserve for a claims made policy, a premium deficiency reserve shall be recognized in accordance with SSAP No. 53—Property Casualty Contracts—Premiums.

**Discounting**

10. With the exception of fixed and reasonably determinable payments such as those emanating from workers’ compensation tabular indemnity reserves and long-term disability claims, property and casualty loss reserves shall not be discounted.

11. Tabular reserves are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. Tabular reserves shall not include medical loss reserves or loss adjustment expense reserves.

12. When establishing discounted loss reserve liabilities using a non-tabular method, the liability shall be determined in accordance with Actuarial Standard of Practice No. 20, Discounting of Property and Casualty Loss and Loss Adjustment Expense but in no event shall the rate used exceed the lesser of the following two standards:

   a. If the reporting entity’s statutory invested assets are at least equal to the total of all policyholder reserves, the reporting entity’s net rate of return on statutory invested assets, less 1.5%, otherwise, the reporting entity’s average net portfolio yield rate less 1.5% as indicated by dividing the net investment income earned by the average of the reporting entity’s current and prior year total assets; or

   b. The current yield to maturity on a United States Treasury debt instrument with maturities consistent with the expected payout of the liabilities.

13. In accordance with SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3), a change in the discount rate used in discounting loss reserves shall be accounted for as a change in estimate. SSAP No. 3 requires changes in estimates to be included in the statement of income in the period the change becomes known.

14. The financial statements shall disclose whether or not any of the liabilities for unpaid losses or unpaid loss adjustment expenses are discounted, including liabilities for workers’ compensation. The following disclosures, for each line of business, shall be made separately for tabular discounting and non-tabular discounting:
a. If a tabular basis is used:

i. Table(s) used;

ii. Rate(s) used;

iii. The amount of discounted liability reported in the financial statement; and

iv. The amount of tabular discount, by the line of business and reserve category (i.e., case and Incurred But Not Reported (IBNR)).

b. If a non-tabular basis is used:

i. Rate(s) used and the basis for the rate(s) used;

ii. Amount of non-tabular discount disclosed by line of business and reserve category (i.e., case, IBNR, allocated loss adjustment expense, and unallocated loss adjustment expense); and

iii. The amount of non-tabular discount reported in the statement.

15. If the rate(s) used to discount prior accident years’ liabilities have changed from the previous financial statement or if there have been changes in other key discount assumptions such as payout patterns, the financial statements shall disclose:

a. Amount of discounted current liabilities at current rate(s) and assumption(s) (exclude the current accident year);

b. Amount of discounted current liabilities at previous rate(s) and assumption(s) (exclude the current accident year);

c. Change in discounted liability due to change in interest rate(s) and assumption(s); and

d. Amount of non-tabular discount, by line of business and reserve category (i.e., case, allocated loss adjustment expense, and unallocated loss adjustment expense).

16. Refer to the preamble for further discussion regarding disclosure requirements.

Structured Settlements

17. Structured settlements are periodic fixed payments to a claimant for a determinable period, or for life, for the settlement of a claim. Frequently a reporting entity will purchase an annuity to fund the future payments. Reporting entities may purchase an annuity in which the entity is the owner and payee, or an annuity in which the claimant is the payee. When annuities are purchased to fund periodic fixed payments they shall be accounted for as follows:

a. When the reporting entity is the owner and payee, no reduction shall be made to loss reserves. The annuity shall be recorded at its present value and reported as an other than invested asset. Income from the annuities shall be recorded as miscellaneous income. The present value of the annuity and the related amortization schedule shall be obtained from the issuing life insurance company at the time the annuity is purchased; and
b. When the claimant is the payee, loss reserves shall be reduced to the extent that the annuity provides for funding of future payments. The cost of the annuities shall be recorded as paid losses.

18. Statutory accounting and Generally Accepted Accounting Principles (GAAP) are consistent for the accounting of structured settlement annuities where the reporting entity is the owner and payee, and where the claimant is the owner and payee and the reporting entity has been released from its obligation. GAAP distinguishes structured settlement annuities where the owner is the claimant and a legally enforceable release from the reporting entity’s liability is obtained from those where the claimant is the owner and payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the claimant is the owner and payee yet the reporting entity has not been released from its obligation. Statutory accounting treats these settlements as completed transactions and considers the earnings process complete, thereby allowing for immediate gain recognition.

19. The following information regarding structured settlements shall be disclosed in the financial statements:
   a. The amount of reserves no longer carried by the reporting entity because it has purchased annuities with the claimant as payee, and the extent to which the reporting entity is contingently liable for such amounts should the issuers of the annuities fail to perform under the terms of the annuities; and
   b. The name, location, and aggregate statement value of annuities due from any life insurer to the extent that the aggregate value of those annuities equal or exceed 1% of policyholders’ surplus. This disclosure shall only include those annuities for which the reporting entity has not obtained a release of liability from the claimant as a result of the purchase of an annuity. The reporting entity shall also disclose whether the life insurers are licensed in the reporting entity’s state of domicile.

20. Refer to the preamble for further discussion regarding disclosure requirements.

Policies with Coverage Periods Equal to or in Excess of Thirteen Months

21. Some property and casualty insurance contracts are written for coverage periods that equal or exceed thirteen months. These contracts may be single premium or fixed premium policies, and generally are not subject to cancellation or premium modification by the reporting entity. The most common policies with such coverage periods are home warranty and mechanical breakdown policies. Accordingly, this guidance is primarily focused on home warranty and mechanical breakdown policies and does not apply to multiple year contracts comprised of single year policies each of which have separate premiums and annual aggregate deductibles.

22. Revenues are generally not received in proportion to the level of exposure or period of exposure. In order to recognize the economic results of the contract over the contract period, a liability shall be established for the estimated future policy benefits while taking into account estimated future premiums to be received. Unearned premiums shall be recorded in accordance with paragraphs 23 to 33 of this statement.

23. Paragraphs 24 to 33 shall apply to all direct and assumed contracts or policies ("contracts"), excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts, that fulfill both of the following conditions:
a. The policy or contract term is greater than or equal to 13 months; and

b. The reporting entity can neither cancel the contract, nor increase the premium during the policy or contract term.

24. At any reporting date prior to the expiration of the contracts, the reporting entity is required to establish an adequate unearned premium reserve, to be reported as the unearned premium reserve. For each of the three most recent policy years, the gross (i.e., direct plus assumed) unearned premium reserve shall be no less than the largest result of the three tests described in paragraphs 27 to 29. For years prior to the three most recent policy years, the gross unearned premium reserve shall be no less than the larger of the aggregate result of Test 1 or the aggregate result of Test 2 or the aggregate result of Test 3 taken over all of those policy years.

25. Any reserve credit applicable for reinsurance ceded shall be appropriately reflected in the financial statements with the resulting net unearned premium reserve being established by the reporting entity.

26. The projected losses and expenses may be reduced for expected salvage and subrogation recoveries, but may not be reduced for anticipated deductible recoveries, unless the deductibles are secured by a letter of credit (LOC) or like security. Projected salvage and subrogation recoveries (net of associated expenses) shall be established based on reporting entity experience, if credible; otherwise, based on industry experience.

27. Test 1 is management’s best estimate of the amounts refundable to the contractholders at the reporting date.

28. Test 2 is the gross premium multiplied by the ratio of subparagraph 28 a. to subparagraph 28 b.:

   a. Projected future gross losses and expenses to be incurred during the unexpired term of the contracts; and

   b. Projected total gross losses and expenses under the contracts.

29. Test 3 is the projected future gross losses and expenses to be incurred during the unexpired term of the contracts as adjusted below, reduced by the present value of the future guaranteed gross premiums, if any.

   a. A provision for investment income is permitted in the unearned premium reserve only with respect to the projected future losses and expenses used to determine the unearned premium reserve, and not with respect to incurred but unpaid losses and expenses;

   b. A provision for investment income on projected future losses and expenses may be calculated to the expected date the loss or expense is incurred, not from the expected date of payment;

   c. The rate of interest used to calculate the provision for investment income shall be reviewed and changed as necessary at each reporting date and shall not exceed the lesser of the following two standards:

      i. The reporting entity’s future net yield to maturity on statutory invested assets as shown in Schedule D, less a 1.5% actuarial provision for adverse deviations; or
ii. The current yield to maturity on a United States Treasury debt instrument maturing in five (5) years as of the reporting date.

d. The reporting entity’s statutory invested assets shall be reduced by the loss and loss adjustment expense reserves on unpaid losses and expenses to calculate “available invested assets.” If the available invested assets are less than the result of Test 3, as calculated above, an “invested asset shortfall” exists. In this event, the Test 3 reserve shall be recalculated with the provision for investment income based on the restricted amount of available invested assets.

30. For the purposes of Tests 2 and 3 above, “expenses” shall include all incurred and anticipated expenses related to the issuance and maintenance of the policy, including loss adjustment expenses, policy issuance and maintenance expenses, commissions, and premium taxes.

31. The projected future losses and expenses are to be re-estimated for each reporting date, and the most recent estimate of these projected losses and expenses is to be used in these Tests. If a range is selected and no single point in the range is identified as being the most likely, then the midpoint of management’s estimate of the range shall be used. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management’s best estimate shall be accrued.

32. The reporting entity shall provide an Actuarial Opinion and Report in conformity with the NAIC Annual Statement Instructions for Property and Casualty Insurers. The scope paragraph of the actuarial opinion shall include the following three items: the Reserve for Ceded Unearned Premiums (as reported on Page 3 of the Annual Statement), the Reserve for Direct Unearned Premiums (as reported on the State Page) and the Reserve for Net Unearned Premiums (as reported on Page 3). These three items must also be covered in the opinion and relevant comments paragraphs of the actuarial opinion. The actuarial opinion shall also disclose the following with regard to both direct insurance and reinsurance assumed subject to this rule:

a. The provision for investment income in the projected future losses and expenses under unexpired policies; and

b. The amount of reduction in unearned premium and loss reserves for each of the following: (i) salvage and subrogation, (ii) reinsurance, (iii) credits for deductibles and self-insured retentions, and (iv) other statutory approved credits.

33. The actuarial report shall include a description of the manner in which the adequacy of the amount of security for deductibles and self-insured retentions is determined. The actuarial report need not assess the credit-worthiness of the specific securities (e.g. LOC’s), but the actuarial opinion must report collectibility problems if known to the actuary.

High Deductible Policies

34. Certain policies, particularly workers’ compensation coverage, are available under high deductible plans. High deductible plans differ from self insurance coupled with an excess of loss policy because state laws generally require the reporting entity to fund the deductible and to periodically review the financial viability of the insured and make an assessment of the suitability of the deductible plan to the insured.
35. The liability for loss reserves shall be determined in accordance with SSAP No. 55. Because the risk of loss is present from the inception date, the reporting entity shall reserve losses throughout the policy period, not over the period after the deductible has been reached. Reserves for claims arising under high deductible plans shall be established net of the deductible, however, no reserve credit shall be permitted for any claim where any amount due from the insured has been determined to be uncollectible.

36. If the policy form requires the reporting entity to fund all claims including those under the deductible limit, the reporting entity is subject to credit risk, not underwriting risk. Reimbursement of the deductible shall be accrued and recorded as a reduction of paid losses simultaneously with the recording of the paid loss by the reporting entity.

37. Amounts accrued for reimbursement of the deductible shall be billed in accordance with the provisions of the policy or the contractual agreement, and shall be aged according to the contractual due date. Ten percent of deductible recoverable in excess of collateral specifically held and identifiable on a per policy basis, shall be reported as a nonadmitted asset, however, to the extent that amounts in excess of the 10% are not anticipated to be collected they shall also be nonadmitted.

38. The financial statements shall disclose the amount of reserve credit that has been recorded for high deductibles on unpaid claims and the amounts that have been billed and are recoverable on paid claims.

39. Refer to the preamble for further discussion regarding disclosure requirements.

Asbestos and Environmental Exposures

40. Asbestos exposures are defined as any loss or potential loss (including both first party and third party claims) related directly or indirectly to the manufacture, distribution, installation, use, and abatement of asbestos-containing material, excluding policies specifically written to cover these exposures. Environmental exposures are defined as any loss or potential loss, including third party claims, related directly or indirectly to the remediation of a site arising from past operations or waste disposal. Examples of environmental exposures include but are not limited to chemical waste, hazardous waste treatment, storage and disposal facilities, industrial waste disposal facilities, landfills, superfund sites, toxic waste pits, and underground storage tanks.

41. Reporting entities that are potentially exposed to asbestos and/or environmental claims shall record reserves consistently with SSAP No. 55.

42. The financial statements shall disclose the following if the reporting entity is potentially exposed to asbestos and/or environmental claims:

   a. The reserving methodology for both case and IBNR reserves;

   b. The amount paid and reserved for losses and loss adjustment expenses for asbestos and/or environmental claims, on a gross and net of reinsurance basis;

   c. Description of the lines of business written for which there is potential exposure of a liability due to asbestos and/or environmental claims, and the nature of the exposure(s);
d. The following for each of the five most current calendar years on both a gross and net of reinsurance basis, separately for asbestos and environmental losses (including coverage dispute costs):

</tbody>
</table>

43. Refer to the preamble for further discussion regarding disclosure requirements.

**Excess Statutory Reserve**

44. This statement eliminates the requirement to record excess statutory reserves. Excess statutory reserves do not meet the definition of a liability established in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets.

**Policyholder Dividends**

45. Dividends to policyholders immediately become liabilities of the reporting entity when they are declared by the board of directors and shall be recorded as a liability. Incurred policyholder dividends are reported in the statement of income.

46. The financial statements shall disclose the terms of dividend restrictions, if any. Refer to the preamble for further discussion regarding disclosure requirements.

**Relevant Literature**

47. Structured settlements are addressed in FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts (FAS 113). FAS 113 is addressed in SSAP No. 62—Property and Casualty Reinsurance. This statement rejects the AICPA Audit and Accounting Guide—Audits of Property and Liability Insurance Companies.

**Effective Date and Transition**

48. This statement is effective for years beginning January 1, 2001. To the extent that the requirements of paragraphs 23 to 33 produce a higher reserve than the reporting entity would have established through the use of their previous methodology, the reporting entity may phase in the additional reserve over a period not to exceed three years. Such a phase in period shall only be permitted if the reporting entity is able to demonstrate that it would not be operating in a hazardous financial condition and that there is not adverse risk to its insureds. The phase in shall be at least 60% of the difference between the reserve required by this statement and the reserve determined by the previous methodology during the first year, 80% in the second year, and 100% in the third year. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

Retrospectively Rated Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for retrospectively rated contracts. This statement applies to property and casualty contracts, life insurance contracts, and accident and health contracts.

2. Retrospective reinsurance contracts are not within the scope of this statement. They are addressed in SSAP No. 62—Property and Casualty Reinsurance (SSAP No. 62).

SUMMARY CONCLUSION

3. A retrospectively rated contract is one which has the final policy premium calculated based on the loss experience of the insured during the term of the policy (including loss development after the term of the policy) and the stipulated formula set forth in the policy. The periodic adjustments may involve either the payment of return premium to the insured or payment of an additional premium by the insured, or both, depending on experience. Retrospective rating features are common in certain property and casualty contracts, group life, and group accident and health contracts. Contracts with retrospective rating features are referred to as loss sensitive contracts.

4. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts meet the definitions of assets and liabilities as set forth in SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5—Liabilities, Contingencies and Impairment of Assets (SSAP No. 5), respectively. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts are admitted assets to the extent they conform to the requirements of this statement.

5. Initial premiums shall be recognized in accordance with SSAP No. 51—Life Contracts, SSAP No. 53—Property Casualty Contracts—Premiums, and SSAP No. 54—Individual and Group Accident and Health Contracts.

6. Because policy periods do not always correspond to reporting periods and because an insured’s loss experience may not be known with certainty until some time after the policy period expires, retrospective premium adjustments shall be estimated based on the experience to date using one of the following methods:

   a. Property and Casualty Contracts:

      i. Use of actuarially accepted methods in accordance with filed and approved retrospective rating plans. This includes but is not limited to the application of historical ratios of retrospective rated developments to earned standard premium to develop a ratio which is then applied to those policies for which no retrospective calculation has been recorded or for which no modification to the recorded calculation is needed. This method results in the calculation of one amount which is either a net asset or a net liability;

      ii. Reviewing each individual retrospectively rated risk, comparing known loss development (including IBNR) with that anticipated in the policy contract to arrive at the best estimate of return or additional premium earned at that point in time. This method results in the calculation of an asset or a liability for each risk. The total of all receivables shall be recorded as an asset and the total of all return premiums shall be recorded as a liability.
b. Life and Accident & Health Contracts: Reporting entities offering group coverage have extensive underwriting procedures and complex individually negotiated benefits and contracts. Due to cost and reporting deadlines, these factors make it difficult to establish an exact valuation of retrospective premium adjustments. The method used to estimate the liability shall be reasonable based on the reporting entity’s procedures, and consistent among reporting periods. Common methods include a mathematical approach using a complex algorithm of the reporting entity’s underwriting rules and experience rating practices, and an aggregate or group approach.

7. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

8. Retrospective premium adjustments are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Additional retrospective premiums and return retrospective premiums shall be recorded as follows:

a. Property and Casualty Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as a receivable with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed;

ii. Accrued return retrospective premiums shall be recorded as a write-in liability with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed.

iii. Ceded retrospective premium balances payable shall be recorded as liabilities, consistent with SSAP No. 62. Ceded retrospective premiums recoverable shall be recorded as an asset. Consistent with SSAP No. 64—Offsetting and Netting of Assets and Liabilities (SSAP No. 64), ceded retrospective premium balances payable may be deducted from ceded retrospective premiums recoverable when a legal right of setoff exists.

b. Life and Accident and Health Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as a write-in for other than invested assets, with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, provision for experience rating refunds, with a corresponding entry to premiums.

9. The amount of accrued estimated retrospective premiums to be recorded as a nonadmitted asset for property and casualty insurers shall be determined as follows:

a. 100% of the amount recoverable from any person for whom any agents’ balances or uncollected premiums are classified as nonadmitted, and item (b), plus item (c) or (d) below. Once an insurer has elected either (c) or (d) below, a change from one to the other requires
approval from the insurer's domiciliary state and such change must be disclosed in the financial statements.

b. Retrospective premium adjustments shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If accrued additional retrospective premiums are not billed in accordance with the policy provisions or contract provisions, the accrual shall be nonadmitted.

c. 10% of any accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss adjustment expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an “A” or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785. Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to applying collateral by account. If the insurer is unable to allocate amounts by account, no credit may be taken for collateral.

d. An amount calculated using the factors below for accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an “A” or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785.

Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to categorizing by Quality Rating.

* The Percentage of Retro Premium to be Nonadmitted is based upon the Insured’s Current Quality Rating (i.e., if an insured’s...
quality rating drops, the percentage relating to the lower quality rating is used in calculating the amount to be nonadmitted and vice versa).

** Insureds that do not have a debt rating issued by a publicly recognized rating agency are required to be rated by the NAIC’s Securities Valuation Office (SVO).

*** In the event the insured has no debt rating (either from a publicly recognized rating agency or from the SVO) the insured’s quality rating will be considered category 5 for purposes of this calculation (i.e., a factor of 20% shall be applied), unless the insurer is aware of conditions of the insured that would warrant a category 6 classification (i.e., a factor of 100%).

10. Once accrued retrospective premium is billed, the due date is governed by SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers. Life and accident and health reporting entities shall nonadmit any accrued retrospective premium that is more than 90 days due. If a reporting entity has issued more than one policy to the same insured, retrospective balances shall be netted in accordance with SSAP No. 64.

11. If, in accordance with SSAP No. 5, it is probable that the additional retrospective premium is uncollectible, any uncollectible additional retrospective premium shall be written off against operations in the period the determination is made. If it is reasonably possible a portion of the balance in excess of the nonadmitted portion determined in accordance with paragraph 9 is not anticipated to be collected, the disclosure requirements outlined in SSAP No. 5 shall be made.

**Disclosures**

12. The financial statements shall disclose the method used by the reporting entity to estimate retrospective premium adjustments. The amount of net premiums written that are subject to retrospective rating features, as well as the corresponding percentage to total net premiums written, shall be disclosed.

13. The financial statements shall disclose the calculation of nonadmitted retrospective premium. If a reporting entity chooses treatment described in paragraph 9 (c) or (d), the appropriate exhibit must be included in the notes to financial statements in the Annual Statement. Once a reporting entity has elected either 9 (c) or (d), a change from one to the other requires approval from the reporting entity’s domiciliary state and such change must be disclosed in the financial statements.

14. Refer to the preamble for further discussion of the disclosure requirements.

**Relevant Literature**

15. This statement rejects FASB Emerging Issues Task Force No. 93-14, Accounting for Multiple Year Retrospectively Rated Insurance Contracts (EITF 93-14) since it applies only to multiple-year retrospectively rated contracts. The statutory principles outlined in the conclusion above are consistent with the guidance provided for accounting and retrospectively rated contracts in FASB Statement No. 60, Accounting and Reporting by Insurance Companies (FAS 60) and EITF 93-14, with the exception of the requirement to record certain amounts as nonadmitted. Although FAS 60 is rejected in SSAP No. 50—Classifications and Definitions of Insurance or Managed Care Contracts In Force and EITF 93-14 is rejected in this statement, it is considered appropriate that the accounting for retrospectively rated
contracts be consistent with those provisions of both FAS 60 and EITF 93-14 as they are consistent with the Statement of Concepts.

Effective Date and Transition

16. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Other Liabilities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for other liabilities.

SUMMARY CONCLUSION

2. For purposes of identifying other liabilities, the guidance outlined in SSAP No. 5—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5) must be considered. This statement is not an all inclusive list of other liabilities. Certain other liabilities are covered in other statements. All other liabilities, whether or not specifically identified in this statement, shall be recorded and disclosed in accordance with SSAP No. 5, which states that “Liabilities shall be recorded on a reporting entity’s financial statements when incurred.”

Self-Insurance

3. Self-insurance occurs when an entity retains insurance risks associated with the entity’s day-to-day operations that are commonly transferred to an insurer through an insurance contract.

4. The fact that a decision is made not to insure against losses that can reasonably be expected some time in the future does not necessitate accrual by the entity if it is not probable that an asset has been impaired or a liability incurred at the date of the financial statements.

5. If an uninsured (self-insured) event occurs, which either creates a liability or impairs an asset, the entity shall either establish a liability or write-down the impaired asset. The liability shall be established using the same estimation methodology an insurance company uses when an insurance contract is issued for the type of insurance risk which is self-insured. SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses describes the specific reserving guidance which shall be followed.

6. The related costs shall be recorded based on the nature of the underlying expenses, and allocated in accordance with SSAP No. 70—Allocation of Expenses. Related costs shall be recorded based on the nature of the underlying expenses.

Amounts Withheld or Retained by Company as Agent or Trustee

7. A reporting entity may, in the normal course of its business, withhold funds as an agent or trustee which will ultimately be paid to others.

8. Amounts withheld or retained by an entity as trustee or agent shall be recorded as a liability when the salaries or other compensation are expensed (subparagraphs 8 a. and 8 b.) or the funds are received (subparagraphs 8 c. through 8 e.). Examples of such occurrences are:

   a. As an employer, the reporting entity deducts and withholds federal and state income taxes, social security taxes, charitable contributions, savings plan deductions, garnishments, employee contributions to pension plans, employee share of group life and health insurance premiums, and other employee salary withholdings or deductions;

   b. Amounts due under deferred compensation arrangements shall be accrued in accordance with the provisions of SSAP No. 14—Postretirement Benefits Other Than Pensions. Segregated funds (i.e., Rabbi trusts and similar arrangements) shall not be netted against the accrued liability unless the requirements of SSAP No. 64—Offsetting and Netting of Assets and Liabilities (SSAP No. 64) are met.
c. For a reporting entity that invests in commercial and residential mortgages, the entity may require the mortgagor to prepay real estate taxes and property insurance premiums which the entity will hold in escrow and pay when due;

d. The reporting entity holds deposits in connection with leases of investment property; and

e. The reporting entity may receive and hold other funds in a fiduciary capacity.

Remittances and Items Not Allocated

9. Cash receipts cannot always be identified for a specific purpose or, for other reasons, applied to a specific account when received. The reporting entity shall record a liability for these cash receipts when the funds are received. These liability accounts are generally referred to as suspense accounts. Examples include:

a. Premium payments received with the application for policies which have not yet been issued;

b. Premium payments in an amount different than the amount billed by the reporting entity; and

c. Unidentified cash receipts.

Interest Payable

10. Interest payable includes interest on debt, interest on real estate obligations, and approved interest on surplus notes. It also includes interest on funds held as a deposit or security, such as those held by a ceding company against a reinsurer. The amount to be reported is the amount which has accrued and is unpaid at the balance sheet date.

Payable to Parent, Subsidiaries and Affiliates

11. A liability shall be recognized and identified as due to affiliates for expenditures incurred on behalf of the reporting entity by a parent, affiliates, or subsidiaries or for amounts owed through other intercompany transactions. Amounts due to or from affiliates shall be offset and reported net only when the provisions of SSAP No. 64 are met. Examples of these expenses are executive salaries, workers’ compensation insurance premiums, and pension contributions.

12. Reinsurance transactions are not considered liabilities of this nature and are covered in SSAP No. 61—Life, Deposit-Type and Accident and Health Reinsurance and SSAP No. 62—Property and Casualty Reinsurance.

Relevant Literature

13. This statement adopts FASB Statement No. 116, Accounting for Contributions Received and Contributions Made and AICPA Statement of Position 96-1, Environmental Remediation Liabilities. This statement is consistent with FASB Statement No. 5, Accounting for Contingencies as discussed in SSAP No. 5.
Effective Date and Transition

14. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Business Combinations and Goodwill

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for business combinations. It addresses: (a) accounting for purchases of subsidiary, controlled and affiliated (SCA) investments (defined in SSAP No. 46—Accounting for Investments in Subsidiary, Controlled, and Affiliated Entities (SSAP No. 46)), (b) accounting for purchases of partnerships, joint ventures, and limited liability companies (defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies), (c) accounting for goodwill, and (d) accounting for mergers.

SUMMARY CONCLUSION

Business Combinations

2. A business combination shall be accounted for as either a statutory purchase or a statutory merger. Business combinations that create a parent, subsidiary relationship shall be accounted for as a statutory purchase. Business combinations where equity of one entity is issued in exchange for the equity of another entity, which is then canceled, and prospectively only one entity exists, shall be accounted for as a statutory merger.

Statutory Purchases of SCA Investments

3. The statutory purchase method of accounting is defined as accounting for a business combination as the acquisition of one entity by another. It shall be used for all purchases of SCA entities including partnerships, joint ventures, and limited liability companies. The acquiring reporting entity shall record its investment at cost. Cost is defined as the sum of: (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition.

4. For those acquired SCA entities accounted for in accordance with paragraphs 7 b. i., 7 b. ii., or 7 b. iii. of SSAP No. 46, goodwill is defined as the difference between the cost of acquiring the entity and the reporting entity’s share of the book value of the acquired entity. When the cost of the acquired entity is greater than the reporting entity’s share of the book value, positive goodwill exists. When the cost of the acquired entity is less than the reporting entity’s share of the book value, negative goodwill exists. Goodwill resulting from assumption reinsurance shall be recorded as a separate write-in for other than invested assets. All other goodwill shall be reported in the carrying value of the investment.

5. A business combination accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraph 7 b. iii. of SSAP No. 46 shall determine the amount of positive goodwill or negative goodwill created by the combination using the reporting entity’s share of the Generally Accepted Accounting Principles (GAAP) net book value of the acquired entity. Business combinations accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraph 7 b. i. or 7 b. ii. of SSAP No. 46 shall determine the amount of positive or negative goodwill created by the business combination using the reporting entity’s share of the statutory book value of the acquired entity.

6. Under the statutory purchase method the historical bases of the acquired entity shall continue to be used in preparing its statutory financial statements except in those instances provided for in subparagraph 7 b. iii. of SSAP No. 46. Therefore, pushdown accounting is not permitted.

7. Positive goodwill recorded under the statutory purchase method of accounting shall be admitted subject to the following limitation: Positive goodwill from all sources, including life, accident and health,
and deposit-type assumption reinsurance, is limited in the aggregate to 10% of the parent reporting entity’s capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, and net deferred tax assets. When negative goodwill exists it shall be recorded as a contra-asset. Positive or negative goodwill resulting from the purchase of a SCA shall be amortized to unrealized capital gains and losses on investments over the period in which the acquiring entity benefits economically, not to exceed 10 years. Positive or negative goodwill resulting from life, accident and health, and deposit-type assumption reinsurance shall be amortized to operations as a component of general insurance expenses over the period in which the assuming entity benefits economically, not to exceed 10 years. Goodwill shall be evaluated separately for each transaction.

**Impairment**

8. For any decline in the fair value of an entity, acquired through a purchase, that is other than temporary, the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., nonadmitted goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary, shall be recorded as realized losses.

9. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based on the statutory equity method or the existence of investee operating losses may indicate a loss in value, however, they are not necessarily indicative of a loss in value that is other than temporary.

**Statutory Mergers**

10. The statutory merger method of accounting is defined as accounting for a business combination in which the original investors in the investee receive equity of the reporting entity for their interest in the investee and only one entity survives. It shall be used for all business combinations accomplished by (a) issuing equity of a newly formed entity for the equity of the merging entities, (b) one entity issuing equity in exchange for the equity of another entity and immediately canceling the equity of that entity, or (c) the exchange of membership interest.

11. Under the statutory merger method, no acquisition shall be recognized because the combination is accomplished without disbursing resources of the constituents. Ownership interest continues and the former statutory bases of accounting shall be retained. However, if one of the merged entities did not employ the statutory basis of accounting, the accounts shall be adjusted to the statutory bases with an offsetting adjustment to beginning surplus of the earliest period presented. The recorded assets, liabilities, and related surplus accounts of the constituents shall be carried forward to the combined corporation at their recorded statutory amounts. The capital accounts of the entities shall be adjusted as necessary to reflect the appropriate par values of the capital stock of the new entity. Adjustments to the capital stock account shall be made to gross paid-in and contributed surplus, to the extent there is a balance in the account.

12. Income of the combined reporting entity shall include income of the constituents for the entire fiscal period in which the combination occurs and the balance sheet and the statement of operations for
the two years presented shall be restated, as required by SSAP No. 3—Accounting Changes and Corrections of Errors.

13. Goodwill on the historical books of any merged entity that arose from a previous business combination involving the merged entities shall be charged or credited to surplus immediately.

Disclosures

14. For business combinations accounted for under the statutory purchase method the financial statements shall disclose the following for as long as unamortized goodwill is reported as a component of the investment:

   a. The name and brief description of the acquired entity;
   b. Method of accounting, that is the statutory purchase method;
   c. Cost of the acquired entity and the amount of goodwill; and
   d. The amount of amortization of goodwill recorded for the period.

15. For business combinations taking the form of a statutory merger the financial statements shall disclose:

   a. The names and brief description of the combined entities;
   b. Method of accounting, that is the statutory merger method;
   c. Description of the shares of stock issued in the transaction;
   d. Details of the results of operations of the previously separate entities for the period before the combination is consummated that are included in the current combined net income, including revenue, net income, and other changes in surplus; and
   e. A description of any adjustments recorded directly to surplus for any entity that previously did not prepare statutory statements.

16. The financial statements shall disclose the following information regarding goodwill resulting from assumption reinsurance:

   a. The name of the ceding entity;
   b. The type of business assumed;
   c. The cost of the acquired business and the amount of goodwill; and
   d. The amount of amortization of goodwill recorded for the period.

17. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:

   a. A description of the impaired assets and the facts and circumstances leading to the impairment; and
b. The amount of the impairment charged to realized capital gains and losses and how fair value was determined.

Relevant Literature

18. This statement adopts paragraph 12 of FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of (FAS 121) to the extent that it addresses impairment of goodwill. Subparagraphs 14 a. and 14 b. of FAS 121 are also adopted. Paragraphs 13, 14 c. and 14 d. of FAS 121 are rejected.

19. This statement adopts FASB Emerging Issues Task Force No. 95-19, Determination of the Measurement Date for the Market Price of Securities Issued in a Purchase Business Combination.

20. This statement rejects Accounting Principles Board Opinion No. 16, Business Combinations, FASB Statement No. 38, Accounting for Preacquisition Contingencies of Purchased Enterprises, an amendment of APB Opinion No. 16, Accounting Principles Board Opinion No. 17, Intangible Assets, and FASB Statement No. 79, Elimination of Certain Disclosures for Business Combinations by Nonpublic Enterprises. Statement of Cash Flow

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the Statement of Cash Flow.

SUMMARY CONCLUSION

2. The Statement of Cash Flow shall be prepared using the direct method. Cash from operations shall be reported consistent with the Statement of Income, excluding the effect of current and prior year accruals. Only the cash portion of a transaction shall be reported in the Statement of Cash Flow. For purposes of the Statement of Cash Flow, cash shall include short-term investments. Specific instructions for the classification of items are provided in the Annual Statement Instructions.

Disclosures

3. The financial statements shall disclose the following:

   a. Transactions considered to be investing and financing activities (consistent with the classifications in the Annual Statement) that affect recognized assets or liabilities but do not result in cash receipts or cash payments in the period (in narrative or schedule form); and

   b. The cash and noncash aspects of the above transactions identified as investing or financing consistent with the classifications provided by the Annual Statement Instructions. Examples of noncash investing and financing transactions include:

      i. Converting debt to equity;

      ii. Acquiring assets by assuming directly related liabilities, such as purchasing a building by incurring a mortgage to the seller; and

      iii. Exchanging noncash assets or liabilities for other noncash assets or liabilities.

4. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

5. This statement adopts FASB Emerging Issues Task Force Issue No. 95-13, Classification of Debt Issue Costs in the Statement of Cash Flows which requires that cash payments for debt issue costs shall be classified as a financing activity in the Statement of Cash Flow.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Allocation of Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for presentation and allocation of certain expenses of reporting entities into general categories and the apportionment of shared expenses between members of a group of entities.

SUMMARY CONCLUSION

2. This statement establishes uniform expense allocation rules to classify expenses within prescribed principal groupings. It is necessary to allocate those expenses which may contain characteristics of more than one classification, which this statement will refer to as allocable expenses.

3. Allocable expenses for property and casualty insurance companies shall be classified into one of three categories on the Underwriting and Investment Exhibit as follows:
   a. Loss adjustment expenses—Expenses incurred in the adjusting, recording and paying of claims (including expenses associated with commutations);
   b. Investment expenses—Expenses incurred in the investing of funds and pursuit of investment income. Such expenses include those specifically identifiable and allocated costs related to activities such as initiating and handling orders, researching and recommending investments (i.e., investment strategy), appraising, valuing, disbursing funds and collecting income, securities safekeeping, real estate taxes, records maintenance, data processing, support personnel, postage and supplies, office overhead, management and executive duties and all other functions reasonably associated with the investment of funds; or
   c. Other underwriting expenses—Allocable expenses other than loss adjustment expenses and investment related expenses.

4. Similarly for life and accident and health insurers allocable expenses shall be categorized as general insurance expenses; insurance taxes, licenses and fees; or investment expenses which are netted against investment income on the Summary of Operations.

5. Allocation to the above categories should be based on a method that yields the most accurate results. Specific identification of an expense with an activity that is represented by one of the categories above will generally be the most accurate method. Where specific identification is not feasible allocation of expenses should be based upon pertinent factors or ratios such as studies of employee activities, salary ratios or similar analyses.

6. Allocation may be entirely to one expense category based upon the type of expense incurred, for example, premium taxes would be 100% allocated to Other Underwriting Expenses for property and casualty companies. Other expenses may be allocated across several categories, such as salaries, which may be allocated to both general insurance expenses and net investment income of a life and accident and health company.

7. Many entities operate within a group where personnel and facilities are shared. Shared expenses, including expenses under the terms of a management contract, shall be apportioned to the entities incurring the expense as if the expense had been paid solely by the incurring entity. The apportionment
shall be completed based upon specific identification to the entity incurring the expense. Where specific identification is not feasible apportionment shall be based upon pertinent factors or ratios.

8. Any basis adopted to apportion expenses shall be that which yields the most accurate results and may result from special studies of employee activities, salary ratios, premium ratios or similar analyses. Expenses that relate solely to the operations of a reporting entity, such as personnel costs associated with the adjusting and paying of claims, must be borne solely by the reporting entity and are not to be apportioned to other entities within a group.

9. Apportioned expenses are subject to presentation and allocation as provided in paragraphs 3 through 6.

10. Any material individual component of the reported expense categories shall be presented either on the face of the Summary of Operations or within the footnotes or related exhibits (e.g., Exhibits 5 and 6 of the Life and Accident and Health annual statement, and Underwriting and Investment Exhibit, Part 4—Expenses of the Property and Casualty annual statement) to the financial statements.

11. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

12. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Policy Acquisition Costs and Commissions

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for policy acquisition costs and commissions.

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent’s license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

Surplus and Quasi-reorganizations

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for statutory surplus and quasi-reorganizations.

SUMMARY CONCLUSION

2. Statutory surplus of a reporting entity consists of the following:
   a. Capital stock;
   b. Treasury stock;
   c. Gross paid-in and contributed surplus;
   d. Surplus notes;
   e. Unassigned funds (surplus);
   f. Special surplus funds; and
   g. Other than special surplus funds.

Capital Stock

3. The articles of incorporation set forth the number of authorized shares of capital stock and the par value of each share. The capital stock account represents the number of shares issued times the par value of each share. When no par value is set forth, the reporting entity shall declare a “stated value” and record such amount in the capital stock account. Changes in the par value of a reporting entity’s capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus.

4. Notes or other receivables received for the issuance of capital stock which have been approved by the domiciliary commissioner and have been satisfied by receipt of cash or readily marketable securities prior to the filing of the annual statement shall be treated as a Type I subsequent event in accordance with SSAP No. 9—Subsequent Events (SSAP No. 9) and as such shall be considered an admitted asset. To the extent that the notes or other receivables are not satisfied, they shall be nonadmitted.

5. Stock splits, similar to stock dividends, have no impact on the overall surplus of a reporting entity. The distinction between a stock split and a stock dividend shall be made in accordance with Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, “Chapter 7, Capital Accounts, Section B-Stock Dividends and Split-ups” (ARB 43). Stock splits shall be recorded by adjusting the capital stock account to reflect the par value of the outstanding number of shares after the split. An offsetting entry shall be made to paid-in or contributed surplus. Stock dividends shall be recorded in a manner consistent with subparagraph 12 i.

Treasury Stock

6. Treasury stock is capital stock that has been issued and subsequently reacquired by the reporting entity. It is held for either reissuance or cancellation in the future. When a reporting entity’s stock is acquired for purposes other than retirement, or when ultimate disposition has not yet been decided, the cost of acquired stock shall be reported as treasury stock which reduces statutory surplus. The acquisition of treasury stock has no effect on either the number of shares issued or the amount of paid up capital.
shown in the capital stock account. Cancellation of treasury stock shall reduce the capital stock account by the par value and reduce paid-in or contributed surplus by the excess of cost over par value or stated value.

**Gross Paid-in and Contributed Surplus**

7. Gross paid-in and contributed surplus is the amount of capital received in excess of the par value of the stock issued. Changes in the par value of a reporting entity's capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus. Forgiveness of a reporting entity's obligations to its parent or other stockholders shall be accounted for as contributed surplus.

8. Notes or other receivables received as additional capital contributions satisfied by receipt of cash or readily marketable securities prior to the filing of the annual statement shall be treated as a Type I subsequent event in accordance with SSAP No. 9 and as such shall be considered an admitted asset based on the evidence of collection and approval of the domiciliary commissioner. To the extent that the notes or other receivables are not satisfied, they shall be nonadmitted.

9. Real estate or other assets received as additional capital contributions are nonreciprocal transfers as defined in SSAP No. 28—Nonmonetary Transactions.

10. Stock purchase warrants issued in return for cash shall be credited to gross paid-in and contributed surplus. When debt instruments are issued with conversion features, no value shall be assigned to the conversion features unless the conversion feature is clearly separable from the debt obligation in the form of a detachable stock purchase warrant. In such instances the relative fair value of the detachable stock purchase warrant at time of issue shall be credited to gross paid-in and contributed surplus.

**Surplus Notes**

11. Surplus notes are financial instruments that are subject to strict control by the commissioner of the reporting entity’s state of domicile and have been approved by the commissioner as to form and content. These instruments are commonly referred to as surplus notes but are also referred to as surplus debentures or contribution certificates. SSAP No. 41—Surplus Notes (SSAP No. 41) provides the specific characteristics of surplus notes and provides accounting guidance for surplus notes. Only notes meeting the requirements of SSAP No. 41 shall be accounted for as surplus notes.

**Unassigned Funds (Surplus)**

12. Unassigned funds (surplus) represents the undistributed and unappropriated amount of surplus at the balance sheet date. Certain components of unassigned funds (surplus) are addressed in more detail in other issue papers. Unassigned funds (surplus) is comprised of the cumulative effect of:

   a. **Net Income**

      Net income resulting from insurance and other operating activities of the reporting entity since its inception is a component of unassigned funds (surplus);

   b. **Unrealized Capital Gains and Losses on Investments**

      The cumulative unrealized capital gain or loss that results from differences between the prescribed statement value of investments carried at market value and the cost of those investments is a component of unassigned funds (surplus). This component changes as
periodic unrealized gains and losses are credited or charged directly to unassigned funds (surplus);

c. Effect of Exchange Rate Fluctuations

The cumulative gain or loss due to translating foreign operations to U.S. dollars and changes in balance sheet asset and liability values due to foreign currency translation is recorded as an unrealized capital gain or loss and therefore is a component of unassigned funds (surplus). This component changes as the exchange rates fluctuate;

d. Nonadmitted Assets

The nonadmitted values of assets owned by a reporting entity are a reduction of unassigned funds (surplus). This component of unassigned funds (surplus) changes as nonadmitted asset values change. Changes in nonadmitted asset values are charged or credited directly to unassigned funds (surplus);

e. Provision for Reinsurance

A reporting entity must establish a statutory liability, provision for reinsurance, for unsecured reinsurance recoverables from unauthorized reinsurers and certain overdue balances from authorized reinsurers. The liability is charged directly to unassigned funds (surplus). Therefore, at any point in time there is a reduction of unassigned funds (surplus) equal to a reporting entity’s liability for unauthorized reinsurance;

f. Asset Valuation Reserves

Where an Asset Valuation Reserve is required to be recorded as a statutory liability, there is a reduction of unassigned funds (surplus) in an amount equal to the liability. Changes to the Asset Valuation Reserve are charged or credited directly to unassigned funds (surplus);

g. Separate Accounts

A life insurer’s balance sheet includes the total assets and liabilities of any separate accounts business which it maintains and, therefore, the surplus, if any, of its separate accounts business. Changes in the surplus of the separate accounts business of an insurer are charged or credited directly to unassigned funds (surplus);

h. Subscribers Savings Accounts

Subscribers Savings Accounts (SSAs) are unique to reciprocals. SSAs represent a portion of a reciprocal insurance company’s surplus that has been identified as subscribers (policyholders) accounts. When the source of amounts credited to the subscriber accounts is from the reciprocal’s operations, the amounts are reported as unassigned funds (surplus);

i. Dividends to Stockholders

Dividends declared are charged directly to unassigned funds (surplus) on the declaration date and are carried as a liability until paid. The amount of the dividend is the cash paid if it is a cash dividend, the fair market value of the assets distributed if it is property dividend, or the par value of the company’s stock if it is a stock dividend. A stock dividend is recorded as a transfer from unassigned funds (surplus) to capital stock. Stock
dividends have no effect on total capital and surplus while other forms of dividends reduce surplus. Forgiveness by a reporting entity of any debt, surplus note or other obligation of its parent or other stockholders shall be accounted for as a dividend. Dividends paid to related parties are subject to the requirements of SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties;

ej. Change in Accounting Principles

The effects of a change in accounting principle or the application of an accounting principle, such as a change in reserve account because of a change in valuation basis, are reported as a charge or credit to unassigned funds (surplus). The effect of these changes shall not be included in the determination of net income or loss;

k. Correction of an Error

Corrections of errors in previously issued financial statements are charged or credited directly to unassigned funds (surplus). The effect of corrections of errors shall not be included in the determination of net income or loss;

l. Stock Issuance Expenses

Expenses relating to the issuance of capital stock, for example underwriting commissions and filing fees are charged to unassigned funds (surplus);

m. Change in Surplus as a Result of Reinsurance

Life and accident and health insurers report increases in surplus that result from certain types of reinsurance transactions on a net of tax basis. As profits emerge from the ceded business the increase in surplus is amortized to income as provided for in Appendix A-791;

n. Changes in Deferred Tax Assets and Deferred Tax Liabilities

Consistent with the conclusions reached in SSAP No. 10—Income Taxes, changes in deferred tax assets and deferred tax liabilities, including changes attributable to changes in tax rates and changes in tax status, if any, shall be recognized as a separate component of unassigned funds (surplus);

o. Other

This category includes other gains and losses in surplus not specifically identified elsewhere in this statement including but not limited to; net proceeds from life insurance on employees and unearned compensation relating to stock issuances made under compensatory Employee Stock Ownership Plans, Stock Option Plans and Stock Purchase Plans.

Special Surplus Funds

13. A company may establish a segregated surplus account to provide for contingencies. Surplus thus appropriated is called appropriated surplus or special surplus funds. Surplus resulting from any retroactive reinsurance transaction entered by a property and casualty insurer must be recorded as an appropriation of surplus by the ceding company (special surplus from retroactive reinsurance account). Voluntary and
general contingency reserves which are not actual liabilities of the company are shown as appropriated surplus or special surplus funds.

**Other Than Special Surplus Funds**

14. Amounts provided to reporting entities, other than stock companies, in the organization stage to defray the expenses and meet initial minimum surplus requirements required to obtain a license to do the business of insurance shall be reported as Other than Special Surplus Funds. Examples of these types of deposits include but are not limited to: guaranty fund notes and subscriber accounts that represent individual subscriber contributions.

**Quasi-reorganizations**

15. Restatement of gross paid-in and contributed surplus and unassigned funds (surplus) under a quasi-reorganization shall be permitted only if the criteria in both subparagraphs 15 a. and 15 b. and either subparagraph 15 c. or 15 d. are met:
   a. The restatement is approved in writing by the domiciliary commissioner;
   b. An 80% or greater change in the ultimate ownership of the reporting entity has occurred within six months prior to approval of the restatement;
   c. A new business plan has been adopted that results in a substantive change in the operations and business mix of the reporting entity and the situation or circumstances that gave rise to the negative unassigned funds (surplus) will not be part of the ongoing operations;
   d. The reporting entity is a shell company with no existing operations, inforce policies or outstanding claims.

16. Restatement shall not result in the unassigned funds (surplus) account being greater than zero or the gross paid-in and contributed surplus account being less than zero immediately following the restatement. Total surplus as regards policyholders shall remain unchanged following restatement. The following components of unassigned funds (surplus) shall be considered in determining the amount available for restatement:
   a. Net Income;
   b. Effect of Exchange Rate Fluctuations;
   c. Dividends to Stockholders;
   d. Change in Accounting Principles;
   e. Correction of an Error and
   f. Stock Issuance Expenses.

17. The assets and liabilities of the reporting entity shall continue to be carried at historical cost or other value required by statutory accounting principles. No adjustments to assets or liabilities shall be made to reflect the effect of a quasi-reorganization.
Changes in Statutory Surplus

18. The components of the change in the capital and surplus accounts shall be presented for each year for which an income statement is presented.

Disclosures

19. The financial statements shall disclose the following:

a. The number of shares of each class of capital stock authorized, issued and outstanding as of the balance sheet date and the par value or stated value of each class;

b. The dividend rate, liquidation value and redemption schedule (including prices and dates) of any preferred stock issues;

c. Dividend restrictions, if any, and an indication if the dividends are cumulative;

d. The portion of the reporting entity profits that may be paid as ordinary dividends to stockholders;

e. A description of any restrictions placed on the unassigned funds (surplus) including for whom the surplus is being held;

f. For mutual reciprocals and similarly organized entities, the total amount of advances to surplus not repaid, if any;

g. The total amount of stock held by the reporting entity, including stock of affiliated entities, for special purposes such as conversion of preferred stock, employee stock options, and stock purchase warrants;

h. A description of the reasons for changes in the balances of any special surplus funds from the prior period;

i. The portion of unassigned funds (surplus) represented or reduced by each of the following items:

   i. unrealized gains and losses;
   
   ii. nonadmitted asset values;
   
   iii. separate account business;
   
   iv. asset valuation reserves;
   
   v. provision for reinsurance.

j. For reciprocal insurance companies only:

   i. the amount of surplus identified as subscriber savings accounts;
ii. the source of the funds (either from the reciprocal’s operations or contributed by
the individual subscriber) and, the reporting location in surplus;

iii. the conditions upon which the balances are paid to the subscribers.

k. Disclosures required by SSAP No. 41;

l. Disclosures required by SSAP No. 9;

m. The impact of the restatement in a quasi-reorganization as long as financial statements for
the period of the reorganization are presented; and

n. The effective date of a quasi-reorganization for a period of ten years following the
reorganization.

20. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

21. Paragraphs 9 and 10 of Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967,
are adopted with modification to eliminate the option of disclosing changes in the notes to the financial
statements rather than in the Statement of Capital and Surplus. This statement adopts paragraphs 10 and
11 of Accounting Principles Board Opinion No. 10, Omnibus Opinion—1966 (APB 10). This statement
also adopts paragraph 12 of Accounting Principles Board Opinion No. 6 (APB 6), Status of Accounting
Research Bulletins, with modification to eliminate the option of recording treasury stock as an asset.

22. Paragraph 15 of FASB Statement No. 5, Accounting For Contingencies, is adopted by this
statement. Paragraphs 1 through 4 and 10 through 16 of Accounting Research Bulletin No. 43,
Restatement and Revision of Accounting Research Bulletins, “Chapter 7, Capital Accounts, Section B—
Stock Dividends and Stock Split-ups” are adopted by this statement.

23. This statement adopts Accounting Research Bulletin No. 43, Restatement and Revision of
Accounting Research Bulletins, “Chapter 7, Capital Accounts, Section A—Quasi-Reorganization or
Corporate Readjustment,” with a modification to permit restatement of gross paid-in and contributed
surplus and unassigned funds (surplus) only in certain limited circumstances.

24. This statement adopts Accounting Research Bulletin No. 46, Discontinuance of Dating Earned
Surplus, with modification to require disclosure of the impact of the restatement in the financial
statements as long as financial statements for the period of reorganization are presented and paragraph 28
of Accounting Principles Board Opinion No. 9, Reporting the Results of Operations. This statement also
adopts FASB Emerging Issues Task Force No. 88-9, Put Warrants, with a modification to reject guidance
related to earnings per share.

25. This statement rejects paragraphs 1 through 11 and 13 through 24 of APB 6, FASB Emerging
Issue Task Force No. 85-1, Classifying Notes Received for Capital Stock, and FASB Emerging Issue Task
Force No. 85-2, Classification of Costs Incurred in a Takeover Defense.
26. This statement also rejects *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins*, "Chapter 1, Prior Opinions", paragraph 12 of APB 10, and *FASB Technical Bulletin No. 85-6, Accounting for a Purchase of Treasury Shares at a Price Significantly in Excess of the Current Market Price of the Shares and the Income Statement Classification of Costs Incurred in Defending against a Takeover Attempt*.

**Effective Date and Transition**

27. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Health Care Delivery Assets - Supplies, Pharmaceuticals and Surgical Supplies, Durable Medical Equipment, Furniture, Medical Equipment and Fixtures, and Leasehold Improvements in Health Care Facilities

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for health care delivery assets - supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures and leasehold improvements.

SUMMARY CONCLUSION

2. This statement applies only to reporting entities which directly provide health care services to subscribers, members or policyholders. Such providers acquire and retain assets commonly referred to as “health care delivery assets” used in connection with the direct delivery of health care services in facilities owned or operated by the reporting entity and include supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures and leasehold improvements in health care facilities.

3. Furniture, medical equipment and fixtures used in connection with the direct provision of health care services include diagnostic equipment, laboratory equipment, patient monitoring equipment, hospital beds, examining tables, and operating room equipment.

4. Supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures, and leasehold improvements in health care facilities owned or operated by the reporting entity meet the definition of assets established in SSAP No. 4--Assets and Nonadmitted Assets (SSAP No. 4). Pharmaceuticals and surgical supplies, and durable medical equipment held by reporting entities and used for the direct delivery of health care services are assets which are used to fulfill policyholder obligations within the meaning of SSAP No. 4 and are admitted assets to the extent that they conform to the requirements of this statement. Furniture, medical equipment and fixtures, and leasehold improvements held by health reporting entities and used for the direct delivery of health care services are admitted assets to the extent that they conform to the requirements of this statement. Furniture, fixtures and equipment, and leasehold improvements which are not used in the direct delivery of health care (e.g., for administrative activities including claims processing, billing, and maintenance of medical records) are nonadmitted assets and are addressed in SSAP No. 19--Furniture, Fixtures and Equipment, Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements (SSAP No. 19).

5. The reporting entity shall maintain a control system that provides for identification of quantities on hand and appropriate valuation (lower of cost or market) of supplies, pharmaceuticals and surgical supplies, and durable medical equipment.

6. Supplies except for pharmaceuticals and surgical supplies discussed in paragraph 7 (e.g., linens, uniforms and garments, food and other commodities, and housekeeping, maintenance, and office supplies) shall be nonadmitted assets.

7. Pharmaceutical and surgical supplies (e.g. drugs, surgical items (such as implants), and medical dressings) used directly in the treatment of medical conditions shall be admitted assets.

8. Durable medical equipment includes consumable or salable equipment such as wheelchairs, crutches, braces, that is generally classified as inventory, and is of a nature that it may be reused.
Subscribers, members or policyholders may utilize durable medical equipment on a temporary basis and later return the equipment to the provider. The provider shall recognize the diminution in value, if any, as a result of use of such equipment.

9. Furniture, medical equipment and fixtures, and leasehold improvements shall be depreciated over their estimated useful lives but for a period not to exceed three years, except for a leasehold improvement which shall be amortized against net income over the shorter of its estimated useful life or the remaining life of the original lease excluding renewal or option periods, using methods detailed in SSAP No. 19.

10. In accordance with the reporting entity’s capitalization policy, immaterial amounts of medical supplies, pharmaceuticals and surgical supplies, durable medical equipment, furniture, medical equipment and fixtures, and leasehold improvements may be expensed when purchased.

The following appendices are an integral part of the Codification. The guidance herein is referred to by specific SSAPs.

Some Appendices define certain terms. Such definitions are not intended to change the meaning of any terms used elsewhere in the Accounting Practices and Procedures Manual, and should only be used in the context of the Appendix in which it appears and the SSAP that refers to that Appendix.

Certain Appendices contain requirements regarding reserves which are effective with new business written after the effective date of the related SSAP. Transition guidance is provided in the related SSAPs.
APPENDIX A-001

Investments of Reporting Entities

Introduction

Section 1. Reporting Requirements
Section 2. Investment Risk Interrogatories
Section 3. Summary Investment Schedule

Introduction

A reporting entity may acquire, hold or invest in investments or engage in investment practices as set forth in the laws and regulations of its domiciliary state. The disclosure required by this appendix is not intended to preempt such state authority and the financial information disclosed herein is intended solely for the use of state regulators for solvency analysis, and should not be used for any other purpose.

Section 1. Reporting Requirements

The following reporting requirements apply to the provisions of this appendix:

1. Annual statement – Section 3
2. Supplement to Annual Statement filed by April 1 – Section 2
3. Audited Statutory Financial Statements – Sections 2 and 3
Section 2. Investment Risks Interrogatories

Answer the following interrogatories by stating the applicable U.S. dollar amounts and percentages of the reporting entity’s total admitted assets held in that category of investments as shown on the Summary Investment Schedule. All reporting entities must answer interrogatories 1, 2, and, if applicable, 11 through 15. Answer each of interrogatories 3 through 10 only if the reporting entity’s aggregate holding in the gross investment category addressed in that interrogatory equals or exceeds 2.5% of the reporting entity’s total admitted assets.

State the reporting entity’s total admitted assets as reported on page two of this annual statement. $___________

1. State by investment category the 10 largest exposures to a single issuer/borrower/investment, excluding (i) U.S. government, U.S. government agency securities and those U.S. Government money market funds listed in the Appendix to the SVO Purposes and Procedures Manual as exempt, (ii) property occupied by the company and (iii) policy loans.

</tbody>
</table>

7. State the amounts and percentages of the reporting entity's total admitted assets held in nonaffiliated, privately placed equities (included in other equity securities) and excluding securities eligible for sale under (i) Securities Exchange Commission (SEC) Rule 144a or (ii) SEC Rule 144 without volume restrictions.

Assets held in nonaffiliated, privately placed equities less than 2.5% of the reporting entity's total admitted assets, detail not required __
a. Aggregate statement value of investments held in nonaffiliated, privately placed equities
   $____________ __________ %

b. Largest 3 investments held in nonaffiliated, privately placed equities:
   i. $____________ __________ %
   ii. $____________ __________ %
   iii. $____________ __________ %

8. State the amounts and percentages of the reporting entity’s total admitted assets held in general partnership interests (included in other equity securities).

   Assets held in general partnership interests less than 2.5% of the reporting entity’s total admitted assets, detail not required __

   a. Aggregate statement value of investments held in general partnership interests
      $____________ __________ %

   b. Largest 3 investments held in general partnership interests:
      i. $____________ __________ %
     ii. $____________ __________ %
     iii. $____________ __________ %

9. With respect to mortgage loans reported in Schedule B, state the amounts and percentages of the reporting entities total admitted assets held:

   Mortgage loans reported in Schedule B less than 2.5% of the reporting entity’s total admitted assets, detail not required __

   a. Each of the 10 largest aggregate mortgage interests. The aggregate mortgage interest represents the combined value of all mortgages secured by the same property or same group of properties:

      Type (Residential, Commercial, Agricultural)
      i. ____________________________ $ ______________ __________ %
     ii. ____________________________ $ ______________ __________ %
     iii. ____________________________ $ ______________ __________ %
     iv. ____________________________ $ ______________ __________ %
     v. ____________________________ $ ______________ __________ %

Appendix A-010

Minimum Reserve Standards For Individual And Group Health Insurance Contracts

Definitions

1. "Annual claim cost" is the net annual cost per unit of benefit before the addition of expenses, including claim settlement expenses, and a margin for profit or contingencies. For example, the annual claim cost for a $100 monthly disability benefit, for a maximum disability benefit period of one year, with an elimination period of one week, with respect to a male at age 35, in a certain occupation might be $12, while the gross premium for this benefit might be $18. The additional $6 would cover expenses and profit or contingencies.

2. "Claims accrued" is that portion of claims incurred on or prior to the valuation date which result in liability of the insurer for the payment of benefits for medical services which have been rendered on or prior to the valuation date, and for the payment of benefits for days of hospitalization and days of disability which have occurred on or prior to the valuation date, which the insurer has not paid as of the valuation date, but for which it is liable, and will have to pay after the valuation date. This liability is sometimes referred to as a liability for "accrued" benefits. A claim reserve, which represents an estimate of this accrued claim liability, must be established.

3. "Claims reported" are considered as a reported claim for annual statement purposes when an insurer has been informed that a claim has been incurred, if the date reported is on or prior to the valuation date.

4. "Claims unaccrued" represent that portion of claims incurred on or prior to the valuation date which result in liability of the insurer for the payment of benefits for medical services expected to be rendered after the valuation date, and for benefits expected to be payable for days of hospitalization and days of disability occurring after the valuation date. This liability is sometimes referred to as a liability for unaccrued benefits. A claim reserve, which represents an estimate of the unaccrued claim payments expected to be made (which may or may not be discounted with interest), must be established.

5. "Date of disablement" is the earliest date the insured is considered as being disabled under the definition of disability in the contract, based on a doctor's evaluation or other evidence. Normally this date will coincide with the start of any elimination period.

6. "Elimination period" is a specified number of days, weeks, or months starting at the beginning of each period of loss, during which no benefits are payable.

7. "Gross premium" is the amount of premium charged by the insurer. It includes the net premium (based on claim-cost) for the risk, together with any loading for expenses, profit or contingencies.

8. The term "group insurance" includes blanket insurance and franchise insurance and any other forms of group insurance.

9. "Level premium" is a premium calculated to remain unchanged throughout either the lifetime of the policy, or for some shorter projected period of years. The premium need not be guaranteed; in which case, although it is calculated to remain level, it may be changed if any of the assumptions on which it was based are revised at a later time. Generally, the annual claim costs are expected to increase each year and the insurer, instead of charging premiums that correspondingly increase each year, charges a premium.
calculated to remain level for a period of years or for the lifetime of the contract. In this case the benefit portion of the premium is more than needed to provide for the cost of benefits during the earlier years of the policy and less than the actual cost in the later years. The building of a prospective contract reserve is a natural result of level premiums.

10. "Long-term care insurance" is any insurance policy or rider advertised, marketed, offered or designed to provide coverage for not less than twelve (12) consecutive months for each covered person on an expense incurred, indemnity, prepaid or other basis; for one or more necessary or medically necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Such term also includes a policy or rider which provides for payment of benefits based upon cognitive impairment or the loss of functional capacity. Long-term care insurance may be issued by insurers; fraternal benefit societies; nonprofit health, hospital, and medical service corporations; prepaid health plans; health maintenance organizations or any similar organization to the extent they are otherwise authorized to issue life or health insurance. Long-term care insurance shall not include any insurance policy which is offered primarily to provide basic Medicare supplement coverage, basic hospital expense coverage, basic medical-surgical expense coverage, hospital confinement indemnity coverage, major medical expense coverage, disability income or related asset-protection coverage, accident only coverage, specified disease or specified accident coverage, or limited benefit health coverage.

11. "Modal Premium" refers to the premium paid on a contract based on a premium term which could be annual, semi-annual, quarterly, monthly, or weekly. Thus if the annual premium is $100 and if, instead, monthly premiums of $9 are paid then the modal premium is $9.

12. Normally the terminal reserve is a positive value. However, if the values of the benefits are decreasing with advancing age or duration it could be a negative value, called a "negative reserve".

13. "Preliminary Term Reserve Method" is a method of valuation whereby the valuation net premium for each year falling within the preliminary term period is exactly sufficient to cover the expected incurred claims of that year, so that the terminal reserves will be zero at the end of the year. As of the end of the preliminary term period, a new constant valuation net premium (or stream of changing valuation premiums) becomes applicable such that the present value of all such premiums is equal to the present value of all claims expected to be incurred following the end of the preliminary term period.

14. "Present value of amounts not yet due on claims" represents the reserve for "claims unaccrued" (see definition), which may be discounted at interest.

15. The term "reserve" is used to include all items of benefit liability, whether in the nature of incurred claim liability or in the nature of contract liability relating to future periods of coverage, and whether the liability is accrued or unaccrued. An insurer under its contracts promises benefits which result in:

a. Claims which have been incurred, that is, for which the insurer has become obligated to make payment, on or prior to the valuation date. On these claims, payments expected to be made after the valuation date for accrued and unaccrued benefits are liabilities of the insurer which shall be provided for by establishing claim reserves; or

b. Claims which are expected to be incurred after the valuation date. Any present liability of the insurer for these future claims shall be provided for by the establishment of contract reserves and unearned premium reserves.

16. "Terminal reserve" is the reserve at the end of a contract year, and is defined as the present value of benefits expected to be incurred after that contract year minus the present value of future valuation net premiums.
17. "Unearned premium reserve" values that portion of the premium paid or due to the insurer which is applicable to the period of coverage extending beyond the valuation date. Thus if an annual premium of $120 was paid on November 1, $20 would be earned as of December 31 and the remaining $100 would be unearned. The unearned premium reserve could be on a gross basis as in this example, or on a valuation net premium basis.

18. "Valuation net modal premium" is the modal fraction of the valuation net annual premium that corresponds to the gross modal premium in effect on any contract to which contract reserves apply. Thus if the mode of payment in effect is quarterly, the valuation net modal premium is the quarterly equivalent of the valuation net annual premium.

Scope

19. These standards apply to all individual and group health and accident and sickness insurance coverages except credit insurance.

20. When an insurer determines that adequacy of its health insurance reserves requires reserves in excess of the minimum standards specified herein, such increased reserves shall be held and shall be considered the minimum reserves for that insurer.

21. With respect to any block of contracts, or with respect to an insurer's health business as a whole, a prospective gross premium valuation is the ultimate test of reserve adequacy as of a given valuation date. Such a gross premium valuation will take into account, for contracts in force, in a claims status, or in a continuation of benefits status on the valuation date, the present value as of the valuation date of: all expected benefits unpaid, all expected expenses unpaid, and all unearned or expected premiums, adjusted for future premium increases reasonably expected to be put into effect.

22. Such a gross premium valuation is to be performed whenever a significant doubt exists as to reserve adequacy with respect to any major block of contracts, or with respect to the insurer's health business as a whole. In the event inadequacy is found to exist, immediate loss recognition shall be made and the reserves restored to adequacy. Adequate reserves (inclusive of claim, premium and contract reserves, if any) shall be held with respect to all contracts, regardless of whether contract reserves are required for such contracts under these standards.

23. Whenever minimum reserves, as defined in this Appendix, exceed reserve requirements as determined by a prospective gross premium valuation, such minimum reserves remain the minimum requirement under these standards.

24. The following paragraphs set forth minimum standards for three categories of health insurance reserves:
   a. Claim Reserves;
   b. Premium Reserves;
   c. Contract Reserves.

25. Adequacy of an insurer's health insurance reserves is to be determined on the basis of all three categories combined. However, these standards emphasize the importance of determining appropriate reserves for each of the three categories separately.

Claim Reserves

26. General:
   a. Claim reserves are required for all incurred but unpaid claims on all health insurance policies.
b. Appropriate claim expense reserves are required with respect to the estimated expense of settlement of all incurred but unpaid claims.

c. All such reserves for prior valuation years are to be tested for adequacy and reasonableness along the lines of claim runoff schedules in accordance with the statutory financial statement including consideration of any residual unpaid liability.

27. Minimum Standards for Claim Reserves:
   a. Disability Income
      i. Interest. The maximum interest rate for claim reserves is specified in Exhibit 1.
      ii. Morbidity. Minimum standards with respect to morbidity are those specified in Exhibit 1, except that;
         (a) For claims with a duration from date of disablement of less than two years, reserves may be based on the insurer’s experience, if such experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.
         (b) For group disability income claims with a duration from date of disablement of more than two (2) years but less than five (5) years, reserves may be based on the insurer’s experience if such experience is considered credible and for which the insurer maintains underwriting and claim administration control. For experience to be considered credible for purposes of this appendix, the company should be able to provide claim termination patterns over no more than six (6) years reflecting at least 5,000 claims terminations during the third through fifth claims durations on reasonably similar applicable policy forms.
         (c) For claim reserves to reflect “sound values” and/or reasonable margins, reserve tables based on credible experience should be adjusted regularly to maintain reasonable margins.
      iii. Duration of Disablement. For contracts with an elimination period, the duration of disablement shall be measured as dating from the time that benefits would have begun to accrue had there been no elimination period.
   b. All Other Benefits
      i. Interest. The maximum interest rate for claim reserves is specified in Exhibit 1.
      ii. Morbidity or other Contingency. The reserve shall be based on the insurer’s experience, if such experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

28. Claim Reserve Methods Generally - A generally accepted actuarial reserving method or other reasonable method or a combination of methods may be used to estimate all claim liabilities. The methods used for estimating liabilities generally may be aggregate methods, or various reserve items may be separately valued. Approximations based on groupings and averages may also be employed. Adequacy of the claim reserves, however, shall be determined in the aggregate.
Premium Reserves

29. General
   a. Unearned premium reserves are required for all contracts with respect to the period of coverage for which premiums, other than premiums paid in advance, have been paid beyond the date of valuation.
   
   b. If premiums due and unpaid are carried as an asset, such premiums must be treated as premiums in force, subject to unearned premium reserve determination. The value of unpaid commissions, premium taxes, and the cost of collection associated with due and unpaid premiums must be carried as an offsetting liability.
   
   c. The gross premiums paid in advance for a period of coverage commencing after the next premium due date which follows the date of valuation may be appropriately discounted to the valuation date and shall be held either as a separate liability or as an addition to the unearned premium reserve which would otherwise be required as a minimum.

30. Minimum Standards for Unearned Premium Reserves
   a. The minimum unearned premium reserve with respect to any contract is the pro rata unearned modal premium that applies to the premium period beyond the valuation date, with such premium determined on the basis of:
      
      i. The valuation net modal premium on the contract reserve basis applying to the contract; or;
      
      ii. The gross modal premium for the contract if no contract reserve applies.
   
   b. However, in no event may the sum of the unearned premium and contract reserves for all contracts of the insurer subject to contract reserve requirements be less than the gross modal unearned premium reserve on all such contracts, as of the date of valuation. Such reserve shall never be less than the expected claims for the period beyond the valuation date represented by such unearned premium reserve, to the extent not provided for elsewhere.

31. Premium Reserve Methods Generally - The insurer may employ suitable approximations and estimates; including, but not limited to groupings, averages and aggregate estimation; in computing premium reserves. Such approximations or estimates shall be tested periodically to determine their continuing adequacy and reliability.

Contract Reserves

32. General:
   a. Contract reserves are required, unless otherwise specified in 32 b. below for:
      
      i. All individual and group contracts with which level premiums are used; or
      
      ii. All individual and group contracts with respect to which, due to the gross premium pricing structure at issue, the value of the future benefits at any time exceeds the value of any appropriate future valuation net premiums at that time. The values specified in this paragraph shall be determined on the basis specified in paragraph 33 below.
   
   b. Contracts not requiring a contract reserve are contracts which cannot be continued after one year from issue.
c. The contract reserve is in addition to claim reserves and premium reserves.

d. The methods and procedures for contract reserves shall be consistent with those for claim reserves for any contract, or else appropriate adjustment must be made when necessary to assure provision for the aggregate liability. The definition of the date of incurral must be the same in both determinations.

33. Minimum Standards for Contract Reserves:

a. Basis:

i. Morbidity or other Contingency. Minimum standards with respect to morbidity are those set forth in Exhibit 1. Valuation net premiums used under each contract must have a structure consistent with the gross premium structure at issue of the contract as this relates to advancing age of insured, contract duration and period for which gross premiums have been calculated. Contracts for which tabular morbidity standards are not specified in Exhibit 1 shall be valued using tables established for reserve purposes by a qualified actuary. The morbidity tables shall contain a pattern of incurred claims cost that reflects the underlying morbidity and shall not be constructed for the primary purpose of minimizing reserves.

ii. Interest. The maximum interest rate is specified in Exhibit 1.

iii. Termination rates. Termination rates used in the computation of reserves shall be on the basis of a mortality table as specified in Exhibit 1 except as noted in the following paragraphs.

(a) Under contracts for which premium rates are not guaranteed, and where the effects of insurer underwriting are specifically used by policy duration in the valuation morbidity standard or for return of premium or other deferred cash benefits, total termination rates may be used at ages and durations where these exceed specified mortality table rates, but not in excess of the lesser of:

1. Eighty percent of the total termination rate used in the calculation of the gross premiums, or
2. Eight percent;

(b) For long-term care individual policies or group certificates, the contract reserve may be established on a basis of separate:

1. Mortality (as specified in Exhibit 1) and
2. Terminations other than mortality, where the terminations are not to exceed:

   a. For policy years one through four (4), the lesser of eighty percent (80%) of the voluntary lapse rate used in the calculation of gross premiums and eight percent (8%);

   b. For policy years five (5) and later, the lesser of one hundred percent (100%) of the voluntary lapse rate used in the calculation of gross premiums and four percent (4%).
(c) Where a morbidity standard specified in Exhibit 1 is on an aggregate basis, such morbidity standard may be adjusted to reflect the effect of insurer underwriting by policy duration. The adjustments must be appropriate to the underwriting.

b. Reserve Method:

i. For insurance except long-term care and return of premium or other deferred cash benefits, the minimum reserve is the reserve calculated on the two-year full preliminary term method; that is, under which the terminal reserve is zero at the first and also the second contract anniversary.

ii. For long-term care insurance, the minimum reserve is the reserve calculated on the one-year full preliminary term method.

iii. (a) For return of premium or other deferred cash benefits, the minimum reserve is the reserve calculated as follows:

(1) On the one year preliminary term method if the benefits are provided at any time before the twentieth anniversary;

(2) On the two year preliminary term method if the benefits are only provided on or after the twentieth anniversary.

(b) The preliminary term method may be applied only in relation to the date of issue of a contract. Reserve adjustments introduced later, as a result of rate increases, revisions in assumptions (e.g., projected inflation rates) or for other reasons, are to be applied immediately as of the effective date of adoption of the adjusted basis.

c. Negative Reserves. Negative reserves on any benefit may be offset against positive reserves for other benefits in the same contract, but the total contract reserve with respect to all benefits combined may not be less than zero.

d. Nonforfeiture Benefits for Long-Term Care Insurance. The contract reserve on a policy basis shall not be less than the net single premium for the nonforfeiture benefits at the appropriate policy duration, where the net single premium is computed according to the above specifications.

34. Alternative Valuation Methods and Assumptions Generally - Provided the contract reserve on all contracts to which an alternative method or basis is applied is not less in the aggregate than the amount determined according to the applicable standards specified above; an insurer may use any reasonable assumptions as to interest rates, termination and/or mortality rates, and rates of morbidity or other contingency. Also, subject to the preceding condition, the insurer may employ methods other than the methods stated above in determining a sound value of its liabilities under such contracts, including, but not limited to the following: the net level premium method; the one-year full preliminary term method; prospective valuation on the basis of actual gross premiums with reasonable allowance for future expenses; the use of approximations such as those involving age groupings, groupings of several years of issue, average amounts of indemnity, grouping of similar contract forms; the computation of the reserve for one contract benefit as a percentage of, or by other relation to, the aggregate contract reserves exclusive of the benefit or benefits so valued; and the use of a composite annual claim cost for all or any combination of the benefits included in the contracts valued.
35. Tests For Adequacy and Reasonableness of Contract Reserves:
   a. Annually, an appropriate review shall be made of the insurer's prospective contract liabilities on contracts valued by tabular reserves, to determine the continuing adequacy and reasonableness of the tabular reserves giving consideration to future gross premiums. The insurer shall make appropriate increments to such tabular reserves if such tests indicate that the basis of such reserves is no longer adequate; subject, however, to the minimum standards in paragraph 33 above.
   b. In the event a company has a contract or a group of related similar contracts, for which future gross premiums will be restricted by contract, insurance department regulations, or for other reasons, such that the future gross premiums reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims, the company shall establish contract reserves for such shortfall in the aggregate.

Reinsurance
36. Increases to, or credits against reserves carried, arising because of reinsurance assumed or reinsurance ceded, must be determined in a manner consistent with these minimum reserve standards and with all applicable provisions of the reinsurance contracts which affect the insurer's liabilities.
Exhibit 1. Specific Standards For Morbidity, Interest And Mortality

Morbidity

1. Minimum morbidity standards for valuation of specified individual contract health insurance benefits are as follows:

a. Disability Income Benefits Due to Accident or Sickness.
   i. Contract Reserves:
      (a) The 1985 Commissioners Individual Disability Tables A (85CIDA); or
      (b) The 1985 Commissioners Individual Disability Tables B (85CIDB).
      (c) Each insurer shall elect, with respect to all individual contracts issued in any one statement year, whether it will use Tables A or Tables B as the minimum standard.
   ii. Claim Reserves:
      The minimum morbidity standard in effect for contract reserves on currently issued contracts, as of the date the claim is incurred.

b. Hospital Benefits, Surgical Benefits and Maternity Benefits (Scheduled benefits or fixed time period benefits only).
   i. Contract Reserves:
      The 1974 Medical Expense Tables, Table A, Transactions of the Society of Actuaries, Volume XXX, pg. 63. Refer to the paper (in the same volume, pg. 9) to which this table is appended, including its discussions, for methods of adjustment for benefits not directly valued in Table A: “Development of the 1974 Medical Expense Benefits,” Houghton and Wolf.
   ii. Claim Reserves:
      No specific standard. See 1e.

c. Cancer Expense Benefits (Scheduled benefits or fixed time period benefits only).
   i. Contract Reserves:
      The 1985 NAIC Cancer Claim Cost Tables.
   ii. Claim Reserves:
      No specific standard. See 1e.

d. Accidental Death Benefits.
   i. Contract Reserves:
      The 1959 Accidental Death Benefits Table.
ii. Claim Reserves:

Actual amount incurred.

e. Other Individual Contract Benefits.

i. Contract Reserves:

For all other individual contract benefits, morbidity assumptions are to be determined as provided in the reserve standards.

ii. Claim Reserves:

For all benefits other than disability, claim reserves are to be determined as provided in the standards.

2. Minimum morbidity standards for valuation of specified group contract health insurance benefits are as follows:

a. Disability Income Benefits Due to Accident or Sickness.

i. Contract Reserves:

The 1987 Commissioners Group Disability Income Table (87CGDT).

ii. Claim Reserves:

The 1987 Commissioners Group Disability Income Table (87CGDT);

b. Other Group Contract Benefits.

i. Contract Reserves:

For all other group contract benefits, morbidity assumptions are to be determined as provided in the reserve standards.

ii. Claim Reserves:

For all benefits other than disability, claim reserves are to be determined as provided in the standards.

Interest

3. For contract reserves the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of whole life insurance issued on the same date as the health insurance contract.

4. For claim reserves on policies that require contract reserves, the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of whole life insurance issued on the same date as the claim incurreal date.

5. For claim reserves on policies not requiring contract reserves, the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of single premium immediate annuities issued on the same date as the claim incurreal date, reduced by one hundred basis points.
Mortality

6. The mortality basis used for all policies except long-term care individual policies and group certificates shall be according to a table (but without use of selection factors) allowed by Appendix A-820 for the valuation of whole life insurance issued on the same date as the health insurance contract. For long-term care insurance individual policies or group certificates the mortality basis used shall be the 1983 Group Annuity Mortality Table without projection.
Exhibit 2. Reserves for Waiver of Premium (Supplementary explanatory material)

1. Waiver of premium reserves involve several special considerations. First, the disability valuation tables promulgated by the NAIC are based on exposures that include contracts on premium waiver as in-force contracts. Hence, contract reserves based on these tables are NOT reserves on “active lives” but rather reserves on contracts “in force.” This is true for the 1964 CDT and for both the 1985 CIDA and CIDB tables.

2. Accordingly, tabular reserves using any of these tables should value reserves on the following basis:
   
   a. Claim reserves should include reserves for premiums expected to be waived, valuing as a minimum the valuation net premium being waived.
   
   b. Premium reserves should include contracts on premium waiver as in-force contracts, valuing as a minimum the unearned modal valuation net premium being waived.
   
   c. Contract reserves should include recognition of the waiver of premium benefit in addition to other contract benefits provided for, valuing as a minimum the valuation net premium to be waived.

3. If an insurer is, instead, valuing reserves on what is truly an active life table, or if a specific valuation table is not being used but the insurer’s gross premiums are calculated on a basis that includes in the projected exposure only those contracts for which premiums are being paid, then it may not be necessary to provide specifically for waiver of premium reserves. Any insurer using such a true “active life” basis should carefully consider, however, whether or not additional liability should be recognized on account of premiums waived during periods of disability or during claim continuation.
APPENDIX A-205

Illustrative Disclosure of Differences Between NAIC Statutory Accounting Practices and Procedures and Accounting Practices Prescribed or Permitted by the State of Domicile

XYZ Insurance Company
Footnotes to Financial Statements
December 31, 2002 and 2001

Note 1—Organization

The XYZ Company is a mutual life insurance company domiciled in the state of ABC and licensed to do business in all 50 states. The company markets traditional whole life, term and disability income insurance policies to individuals through its career agency force.

Notes 2—Basis of Presentation

The financial statements of XYZ Company are presented on the basis of accounting practices prescribed or permitted by the ABC Insurance Department.

The ABC Insurance Department recognizes only statutory accounting practices prescribed or permitted by the state of ABC for determining and reporting the financial condition and results of operations of an insurance company, for determining its solvency under the ABC Insurance Law. The National Association of Insurance Commissioners’ (the “NAIC”) Accounting Practices and Procedures Manual version effective January 1, 2001 (“NAIC SAP”) has been adopted as a component of prescribed or permitted practices by the state of ABC. The state has adopted certain prescribed accounting practices which differ from those found in NAIC SAP. Specifically, 1) goodwill arising from the purchase of a subsidiary, controlled or affiliated entity is written off directly to surplus in the year it originates by ABC domiciled companies; in NAIC SAP, goodwill in amounts not to exceed 10% of an insurer’s capital and surplus may be capitalized and all amounts of goodwill are amortized to unrealized gains and losses on investments over periods not to exceed 10 years, and 2) 100% of all fixed assets may be admitted by ABC domiciled companies; in NAIC SAP, fixed assets are not admitted. The Commissioner of Insurance has the right to permit other specific practices which deviate from prescribed practices.

The Company, with the explicit permission of the Commissioner of Insurance of the state of ABC, records the value of its home office building at fair market value instead of at the depreciated cost method required by NAIC SAP. If the home office building were carried at depreciated cost, home office property and statutory surplus would be decreased by $2,500,000 and $2,300,000 as of December 31, 2002 and 2001, respectively. Additionally, net income would be increased by $120,000 and $103,000 respectively, for the years then ended.
A reconciliation of the Company's net income and capital and surplus between NAIC SAP and practices prescribed and permitted by the state of ABC is shown below.

Appendix A-225

Managing General Agents

Definitions

1. "Managing General Agent" (MGA) means any person, firm, association or corporation who:

   a. Manages all or part of the insurance business of an insurer (including the management of a separate division, department or underwriting office); and

   b. Acts as an agent for such insurer whether known as a Managing General Agent, manager or other similar term, who, with or without the authority, either separately or together with affiliates, produces, directly or indirectly, and underwrites an amount of gross direct written premium equal to or more than five percent (5%) of the policyholder surplus as reported in the last annual statement of the insurer in any one quarter or year together with one or more of the following activities related to the business produced:

      i. Adjusts or pays claims in a material amount;
      
      ii. Negotiates reinsurance on behalf of the insurer.

   c. Notwithstanding the above, the following persons shall not be considered MGA's for the purposes of this Appendix:

      i. An employee of the insurer;
      
      ii. A U.S. Manager of the United States branch of an alien insurer;
      
      iii. An underwriting manager which, pursuant to contract, manages all or part of the insurance operations of the insurer, is under common control with the insurer, subject to a regulatory holding company act, if any, and whose compensation is not based on the volume of premiums written;
      
      iv. The attorney-in-fact authorized by and acting for the subscribers of a reciprocal insurer or inter-insurance exchange under powers of attorney.

2. "Underwrite" means the authority to accept or reject risk on behalf of the insurer.
Appendix A-235

Interest-Indexed Annuity Contracts

Definition

1. "Interest-indexed annuity contract" means any annuity contract where the interest credits are linked to an external reference.

Valuation Requirements

2. In developing life insurance reserves for interest-indexed annuity contracts, the insurer must be in compliance with the minimum requirements of Appendix A-820.

3. In the calculation of reserves for interest-indexed annuity contracts, future guarantees will be determined by assuming that future interest crediting rates will be equal to the statutory valuation interest rate for such contracts as defined in Appendix A-820.
Appendix A-250

Variable Annuities

Definitions

1. "Variable annuity" means a policy or contract, individual or group, that provides for annuity benefits that vary according to the investment experience of a separate account or accounts maintained by the insurer as to the policy or contract.

2. The company shall maintain in each such separate account assets with a value at least equal to the reserves and other contract liabilities with respect to the account.

3. The reserve liability for variable annuities shall be established pursuant to the requirements of Appendix A-820 in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.
Appendix A-255

Modified Guaranteed Annuities

Definitions

1. A "Modified Guaranteed Annuity" is a deferred annuity contract, individual or group, the underlying assets of which shall be held in a separate account, and the values of which are guaranteed if held for specified periods. The contract contains nonforfeiture values that are based upon a market-value adjustment formula if held for shorter periods. This formula may or may not, reflect the value of assets held in the separate account. The assets underlying the contract must be in a separate account during the period or periods when the contract holder can surrender the contract.

2. "Interest credits" means all interest that is credited to the contract.

3. "Separate account" means a separate account established pursuant to the insurance laws pertaining to the insurer.

Valuation Requirements

4. Reserve liabilities for modified guaranteed annuities shall be established as provided in Appendix A-820 in accordance with actuarial procedures that recognize:
   a. That assets of the separate account are based on market values;
   b. The variable nature of benefits provided; and
   c. Any mortality guarantees.

5. As a minimum, the separate account liability will equal the surrender value based upon the market-value adjustment formula contained in the contract. If that liability is greater than the market value of the assets, a transfer of assets will be made into the separate account so that the market value of the assets at least equals that of the liabilities. Any additional reserve that is needed to cover future guaranteed benefits shall be established.

6. The market-value adjustment formula, the interest guarantees, and the degree to which projected cash flow of assets and liabilities are matched must also be considered. The company shall determine whether the assets in the separate account are adequate to provide all future benefits that are guaranteed.

Separate Accounts

7. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.
Appendix A-270

Variable Life Insurance

Definitions

1. "Variable life insurance policy" means an individual or group policy that provides for life insurance the amount or duration of which varies according to the investment experience of any separate account or accounts established and maintained by the insurer as to the policy.

2. "Affiliate" of an insurer means a person, directly or indirectly, controlling, controlled by, or under common control with the insurer; a person who regularly furnishes investment advice to the insurer with respect to its separate accounts for which a specific fee or commission is charged; or any director, officer, partner or employee of the insurer, controlling or controlled person, or person providing investment advice or any member of the immediate family of such person.

3. "Assumed investment rate" means the rate of investment return that would be required to be credited to a variable life insurance policy, after deduction of charges for taxes, investment expenses and mortality and expense guarantees to maintain the variable death benefit equal at all times to the amount of death benefit, other than incidental insurance benefits, which would be payable under the plan of insurance if the death benefit did not vary according to the investment experience of the separate account.

4. "Benefit base" means the amount to which the net investment return is applied.

5. "Control" (including the terms "controlling," "controlled by" and "under common control with") means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing more than ten percent (10%) of the voting securities of any other person. This presumption can be overcome by predominant evidence to the contrary, however, it shall stand until overcome by such predominant contradictory evidence.

6. "Flexible premium policy" means any variable life insurance policy other than a "scheduled premium policy" as defined in paragraph 13.

7. "General account" means all assets of the insurer other than assets in separate accounts.

8. "Incidental insurance benefit" means all insurance benefits in a variable life insurance policy, other than the variable death benefit and the minimum death benefit, including but not limited to, accidental death and dismemberment benefits, disability benefits, guaranteed insurability options, family income or term riders.

9. "Minimum death benefit" means the amount of the guaranteed death benefit, other than incidental insurance benefits, payable under a variable life insurance policy regardless of the investment performance of the separate account.
10. "Net investment return" means the rate of investment return in a separate account to be applied to the benefit base.

11. "Person" means an individual, corporation, partnership, association, trust or fund.

12. "Policy processing day" means the day on which charges authorized in the policy are deducted from the policy’s cash value.

13. "Scheduled premium policy" means a variable life insurance policy under which both the amount and timing of premium payments are fixed by the insurer.

14. "Variable death benefit" means the amount of the death benefit, other than incidental insurance benefits, payable under a variable life insurance policy dependent on the investment performance of the separate account, which the insurer would have to pay in the absence of any minimum death benefit.

**Valuation Requirements**

15. Reserve liabilities for variable life insurance policies shall be established as provided in Appendix A-820 in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.

16. Reserve liabilities for the guaranteed minimum death benefit shall be the reserve needed to provide for the contingency of death occurring when the guaranteed minimum death benefit exceeds the death benefit that would be paid in the absence of the guarantee, and shall be maintained in the general account of the insurer and shall not be less than the greater of the following minimum reserves:

   a. The aggregate total of the term costs, if any, covering a period of one full year from the valuation date or, if less, covering the period provided for in the guarantee not otherwise provided for by the reserves held in the separate account, on each variable life insurance contract, assuming an immediate one-third depreciation in the current value of the assets in the separate account followed by a net investment return equal to the assumed investment rate; or

   b. The aggregate total of the “attained age level” reserves on each variable life insurance contract. The “attained age level” reserve on each variable life insurance contract shall not be less than zero and shall equal the “residue,” as described in paragraph 16 b. i. below, of the prior year’s “attained age level” reserve on the contract, with any such “residue,” increased or decreased by a payment computed on an attained age basis as described in paragraph 16 b. ii. below.

   i. The “residue” of the prior year’s “attained age level” reserve on each variable life insurance contract shall not be less than zero and shall be determined by adding interest at the valuation interest rate to the prior year’s reserve, deducting the tabular claims based on the “excess,” if any, of the guaranteed minimum death benefit over the death benefit that would be payable in the absence of a guarantee, and dividing the net result by the tabular probability of survival. The “excess” referred to in the preceding sentence shall be based on the actual level of death benefits that would have been in effect during the preceding year in the absence of the guarantee, taking appropriate account of the reserve assumptions regarding the distribution of death claim payments over the year.

   ii. The payment referred to in this paragraph shall be computed so that the present value of a level payment of that amount each year over the future period for which charges for this risk will be collected under the contract, is equal to (A) minus (B) minus (C), where (A) is the present value of the future guaranteed
minimum death benefits, (B) is the present value of the future death benefits that would be payable in the absence of such guarantee, and (C) is any "residue," as described in paragraph 16 b. i. of the prior year's "attained age level" reserve on such variable life insurance contract. This result shall be divided by the present value, at the valuation date, of a temporary life annuity of one per annum at the current attained age payable over the period in which future charges for this risk will be collected under the contract. If no future charges for this risk will be collected under the contract, the payment shall equal (A) minus (B) minus (C). The amounts of the future death benefits referred to in (B) shall be computed assuming a net investment return of the separate account which may differ from the assumed investment rate or the valuation interest but in no event may exceed the maximum interest rate permitted for the valuation of life contracts.

c. The valuation interest rate and mortality table used in computing the two minimum reserves described in 16 a. and 16 b. above shall conform to acceptable standards for the valuation of life insurance contracts. In determining the minimum reserves, the company may employ suitable approximations and estimates, including but not limited to groupings and averages.

17. Incidental Insurance Benefit. Reserve liabilities for all fixed incidental insurance benefits and any guarantees associated with variable accidental insurance benefits shall be maintained in the general account and reserve liabilities for all variable aspects of the variable incidental insurance benefits shall be maintained in a separate account, in amounts determined in accordance with the actuarial procedures appropriate to the benefit.

Separate Accounts

18. The assets of separate accounts shall be valued at least as often as variable benefits are determined but in any event at least monthly.

19. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.
Appendix A-440

Insurance Holding Companies

Definitions

1. "Affiliate." An "affiliate" of, or person "affiliated" with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

2. "Control." The term "control" (including the terms "controlling," "controlled by" and "under common control with") means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption can be overcome by predominant evidence to the contrary, however, it shall stand until overcome by such predominant contradictory evidence.

3. "Insurance Holding Company System." An "insurance holding company system" consists of two (2) or more affiliated persons, one or more of which is an insurer.

4. "Person." A "person" is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert, but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.

5. "Securityholder." A "securityholder" of a specified person is one who owns any security of such person, including common stock, preferred stock, debt obligations and any other security convertible into or evidencing the right to acquire any of the foregoing.

6. "Subsidiary." A "subsidiary" of a specified person is an affiliate controlled by such person directly or indirectly through one or more intermediaries.

7. "Voting Security." The term "voting security" shall include any security convertible into or evidencing a right to acquire a voting security.

Subsidiaries of Insurers

8. A domestic insurer, either by itself or in cooperation with one or more persons, may organize or acquire one or more subsidiaries. The subsidiaries may conduct any kind of business or businesses and their authority to do so shall not be limited by reason of the fact that they are subsidiaries of a domestic insurer.

9. In addition to investments in common stock, preferred stock, debt obligations and other securities detailed under all other areas of the Codification, a domestic insurer may also invest in, and report as an admitted asset, common stock, preferred stock, debt obligations, and other securities of one or more subsidiaries, amounts which do not exceed the lesser of ten percent (10%) of the insurer's assets or fifty percent (50%) of the insurer's surplus as regards policyholders; both as required to be shown on
the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner, provided that after such investments, the insurer’s surplus as regards policyholders will be reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs. In calculating the amount of such investments, investments in domestic or foreign insurance subsidiaries and health maintenance organizations shall be excluded.

10. Qualification of Investment; When Determined. Whether any investment meets the requirements outlined herein is to be determined before the investment is made, by calculating the applicable investment limitations as though the investment had already been made, taking into account the then carrying value of all previous investments in debt obligations, and the carrying value of all previous investments in equity securities as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner.

Standards and Management of an Insurer Within a Holding Company System

Transactions Within a Holding Company System

11. Transactions within a holding company system to which an insurer subject to registration is a party shall be subject to the following standards:

a. The terms shall be fair and reasonable;

b. Charges or fees for services performed shall be reasonable;

c. Expenses incurred and payment received shall be allocated to the insurer in conformity with statutory accounting practices consistently applied;

d. The books, accounts and records of each party to all such transactions shall be so maintained as to clearly and accurately disclose the nature and details of the transactions including such accounting information as is necessary to support the reasonableness of the charges or fees to the respective parties; and

e. The insurer’s surplus as regards policyholders following any dividends or distributions to shareholder affiliates shall be reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs. In determining whether an insurer’s surplus as regards policyholders is reasonable in relation to the insurer’s outstanding liabilities and adequate to meet its financial needs, the following factors, among others, shall be considered:

i. The size of the insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force and other appropriate criteria;

ii. The extent to which the insurer’s business is diversified among several lines of insurance;

iii. The number and size of risks insured in each line of business;

iv. The extent of the geographical dispersion of the insurer’s insured risks;

v. The nature and extent of the insurer’s reinsurance program;

vi. The quality, diversification and liquidity of the insurer’s investment portfolio;

vii. The recent past and projected future trend in the size of the insurer’s investment portfolio;

viii. The surplus as regards policyholders maintained by other comparable insurers;

ix. The adequacy of the insurer’s reserves; and

x. The quality and liquidity of investments in affiliates.
[Drafting Note: The methodology for determining proper admission of subsidiary investments, based on the limits discussed in paragraphs 9 and 10 of this Appendix, has been adapted to conform to the methodologies used elsewhere in this Codification regarding limits for admission of assets.]
Appendix A-585

Universal Life Insurance

Definitions

1. "Cash surrender value" means the net cash surrender value plus any amounts outstanding as policy loans.

2. "Fixed premium universal life insurance policy" means a universal life insurance policy other than a flexible premium universal life insurance policy.

3. "Flexible premium universal life insurance policy" means a universal life insurance policy which permits the policyowner to vary, independently of each other, the amount or timing of one or more premium payments or the amount of insurance.

4. "Interest-indexed universal life insurance policy" means any universal life insurance policy where the interest credits are linked to an external referent.

5. "Net cash surrender value" means the maximum amount payable to the policyowner upon surrender.

6. "Policy value" means the amount to which separately identified interest credits and mortality, expense, or other charges are made under a universal life insurance policy.

7. "Universal life insurance policy" means any individual or group life insurance policy under the provisions of which separately identified interest credits (other than in connection with dividend accumulations, premium deposit funds, or other supplementary accounts) and mortality and expense charges are made to the policy. A universal life insurance policy may provide for other credits and charges, such as charges for the cost of benefits provided by rider.

Valuation

Requirements

8. The minimum valuation standard for universal life insurance policies shall be the Commissioners Reserve Valuation Method, as described below for such policies, and the tables and interest rates specified below. The terminal reserve for the basic policy and any benefits and/or riders for which premiums are not paid separately as of any policy anniversary shall be equal to the net level premium reserves less (C) and less (D), where:

   a. Reserves by the net level premium method shall be equal to ((A)-(B))r where (A), (B) and "r" are as defined below:

      i (A) is the present value of all future guaranteed benefits at the date of valuation.

      ii (B) is the quantity \( PVFB \, ax+t \)

         \( ax \)
where PVFB is the present value of all benefits guaranteed at issue assuming future guaranteed maturity premiums are paid by the policyowner and taking into account all guarantees contained in the policy or declared by the insurer.

b. \( \ddot{a}_x \) and \( \ddot{a}_{x+t} \) are present values of an annuity of one per year payable on policy anniversaries beginning at ages \( x \) and \( x+t \), respectively, and continuing until the highest attained age at which a premium may be paid under the policy. The letter "x" is defined as the issue age and the letter "t" is defined as the duration of the policy.

c. The guaranteed maturity premium for flexible premium universal life insurance policies shall be that level gross premium, paid at issue and periodically thereafter over the period during which premiums are allowed to be paid, which will mature the policy on the latest maturity date, if any, permitted under the policy (otherwise at the highest age in the valuation mortality table), for an amount which is in accordance with the policy structure. The guaranteed maturity premium is calculated at issue based on all policy guarantees at issue (excluding guarantees linked to an external referent). The guaranteed maturity premium for fixed premium universal life insurance policies shall be the premium defined in the policy which at issue provides the minimum policy guarantees.

d. The letter "r" is equal to one, unless the policy is a flexible premium policy and the policy value is less than the guaranteed maturity fund, in which case "r" is the ratio of the policy value to the guaranteed maturity fund.

e. The guaranteed maturity fund at any duration is that amount which, together with future guaranteed maturity premiums, will mature the policy based on all policy guarantees at issue.

f. \( (C) \) is the quantity \( ((a)-(b))\ddot{a}_{x+t} \cdot r \) where \( (a)-(b) \) is as described

\[ \ddot{a}_x \]

in paragraph 9 of Appendix A-820 for the plan of insurance defined at issue by the guaranteed maturity premiums and all guarantees contained in the policy or declared by the insurer.

\( (D) \) is the sum of any additional quantities analogous to \( (C) \) which arise because of structural changes in the policy, with each such quantity being determined on a basis consistent with that of \( (C) \) using the maturity date in effect at the time of the change.

h. The guaranteed maturity premium, the guaranteed maturity fund and \( (B) \) above shall be recalculated to reflect any structural changes in the policy. This recalculation shall be done in a manner consistent with the descriptions above.

i. Future guaranteed benefits are determined by (1) projecting the greater of the guaranteed maturity fund and the policy value, taking into account future guaranteed maturity premiums, if any, and using all guarantees of interest, mortality, expense deductions, etc., contained in the policy or declared by the insurer; and (2) taking into account any benefits guaranteed in the policy or by declaration which do not depend on the policy value.

j. All present values shall be determined using (i) an interest rate (or rates) specified by Appendix A-820 for policies issued in the same year; (ii) the mortality rates specified by Appendix A-820 for policies issued in the same year; and (iii) any other tables needed to
value supplementary benefits provided by a rider which is being valued together with the policy.

9. To the extent that the insurer declares guarantees more favorable than those in the policy (contractual guarantees), such declared guarantees shall be applicable to the determination of future guaranteed benefits.

10. The mortality and interest bases for calculating present values are the minimum standards in Appendix A-820.

11. In effecting structural changes, consistent methods are prescribed when calculating reserves. Several such methods are possible, but perhaps the simplest such method would be that of maintaining proportionality between the Guaranteed Maturity Fund and Guaranteed Maturity Premium values and the current face amount. In applying this method, Guaranteed Maturity Fund and Guaranteed Maturity Premium values could be calculated per dollar of face amount and simply multiplied by the new face amount. This would eliminate much of the complexity involved in other methods.

Alternative Minimum Reserves

12. If, in any policy year, the guaranteed maturity premium on any universal life insurance policy is less than the valuation net premium for such policy, calculated by the valuation method actually used in calculating the reserve thereon but using the minimum valuation standards of mortality and rate of interest, the minimum reserve required for such contract shall be the greater of a. or b.

   a. The reserve calculated according to the method, the mortality table, and the rate of interest actually used.

   b. The reserve calculated according to the method actually used but using the minimum valuation standards of mortality and rate of interest and replacing the valuation net premium by the Guaranteed Maturity Premium in each policy year for which the valuation net premium exceeds the Guaranteed Maturity Premium.

13. For universal life insurance reserves on a net level premium basis, the valuation net premium is:

   \[ \frac{PVFB}{\hat{a}x} \]

   and for reserves on a Commissioners Reserve Valuation Method, the valuation net premium is:

   \[ \frac{PVFB + (a)-(b)}{\hat{a}x} \]

   \[ \hat{a}x \]

Footnotes:

1. The maturity amount shall be the initial death benefit where the death benefit is level over the lifetime of the policy except for the existence of a minimum-death-benefit corridor, or shall be the specified amount where the death benefit equals a specified amount plus the policy value or cash surrender value except for the existence of a minimum-death-benefit corridor.

2. The Guaranteed Maturity Premium for both flexible and fixed premium policies shall be adjusted for death benefit corridors provided by the policy. The Guaranteed Maturity Premium may be less than the premium necessary to pay all charges. This can especially happen in the first year for policies with large first year expense charges.

3. Structural changes are those changes which are separate from the automatic workings of the policy. Such changes usually would be initiated by the policyholder and include changes in the
guaranteed benefits, changes in latest maturity date, or changes in allowable premium payment period. For fixed premium universal life policies with redetermination of all credits and charges no more frequently than annually, on policy anniversaries, structural changes also include changes in guaranteed benefits, or in fixed premiums, unanticipated by the guaranteed maturity premium for such policies at the date of issue, even if such changes arise from automatic workings of the policy. The recomputation of (B) in paragraph 8 a. ii. above, for fixed premium universal life structural changes, shall exclude from PVFB, the present value of future guaranteed benefits, those guaranteed benefits which are funded by the excess of the insurer's declared guarantees of interest, mortality and expenses, over the guarantees contained in the policy at the date of issue.
Appendix A-588

Modified Guaranteed Life Insurance

Definitions

1. "Interest Credits" means all interest that is credited to the policy.

2. "Modified Guaranteed Life Insurance Policy" means an individual or group policy of life insurance, the underlying assets which shall be held in a separate account, and the values of which are guaranteed if held for specified periods. It contains cash-surrender values that are based upon a market value adjustment formula if held for shorter periods. The formula may, or may not, reflect the value of assets held in the separate account. The assets underlying the policy must be in a separate account during the period or periods when the policyholder can surrender the policy.

3. "Policy processing day" means the day on which charges authorized in the policy are deducted from the policy’s cash value.

4. "Separate account" means a separate account established pursuant to the insurance laws pertaining to the insurer.

Valuation Requirements

5. Reserve liabilities for modified guaranteed life insurance policies shall be established pursuant to the requirements of Appendix A-820 in accordance with actuarial procedures that recognize:

   a. That assets of the separate account are based on market value;

   b. The variable nature of the benefits provided; and

   c. Any mortality guarantees.

6. As a minimum, the separate account liability will equal the surrender value based upon the market value adjustment formula contained in the policy. If that liability is greater than the market value of the assets, a transfer of assets will be made into the separate account so that the market value of the assets at least equals that of the liabilities. Any additional reserve that is needed to cover future guaranteed benefits shall be established.

7. The market value adjustment formula, the interest guarantees and the degree to which projected cash flow of assets and liabilities are matched must also be considered. The company shall determine whether the assets in the separate account are adequate to provide all future guaranteed benefits.

8. Reserve liabilities for all fixed incidental insurance benefits and any guarantees associated with variable incidental insurance benefits shall be maintained in the general account.

Separate Accounts

9. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.
Appendix A-620

Accelerated Benefits

Purpose
The purpose of this Appendix is to provide guidance with respect to accelerated benefit related to individual and group life insurance policies. This Appendix shall apply to all accelerated benefits provisions of individual and group life insurance policies except those subject to Appendix A-641.

Definitions
1. "Accelerated benefits" covered under this Appendix are benefits payable under a life insurance contract:
   a. To a policyowner or certificateholder, during the lifetime of the insured, in anticipation of death or upon the occurrence of specified life-threatening or catastrophic conditions as defined by the policy or rider; and
   b. Which reduce the death benefit otherwise payable under the life insurance contract; and
   c. Which are payable upon the occurrence of a single qualifying event which results in the payment of a benefit amount fixed at the time of acceleration.

2. "Qualifying event" shall mean one or more of the following:
   a. A medical condition which would result in a drastically limited life span as specified in the contract, for example, twenty-four (24) months or less; or
   b. A medical condition which has required or requires extraordinary medical intervention, such as, but not limited to, major organ transplant or continuous artificial life support, without which the insured would die; or
   c. Any condition which usually requires continuous confinement in an eligible institution as defined in the contract if the insured is expected to remain there for the rest of his or her life; or
   d. A medical condition which would, in the absence of extensive or extraordinary medical treatment, result in a drastically limited life span. Such conditions may include, but are not limited to, one or more of the following:
      i. Coronary artery disease resulting in an acute infarction or requiring surgery;
      ii. Permanent neurological deficit resulting from cerebral vascular accident;
      iii. End stage renal failure; or
      iv. Acquired Immune Deficiency Syndrome.
Valuation Requirements

3. When benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves shall be determined in accordance with Appendix A-820. Mortality tables and interest for life insurance reserves as specified in Appendix A-820 shall be used as well as appropriate assumptions for the other provisions incorporated in the policy form. Reserves in the aggregate should be sufficient to cover:

   a. Policies upon which no claim has yet arisen.

   b. Policies upon which an accelerated claim has arisen.

4. For policies and certificates which provide actuarially equivalent benefits, no additional reserves need to be established.

5. Policy liens and policy loans, including accrued interest, represent assets of the company for statutory reporting purposes. For any policy on which the policy lien exceeds the policy's statutory reserve liability such excess must be held as a non-admitted asset.
Appendix A-628

Title Insurance

Definitions
1. "Abstract of title" or "abstract" means a written history, synopsis or summary of the recorded instruments affecting the title to real property.

2. "Affiliate" means a specific person that directly, or indirectly through one or more intermediaries, controls, or is controlled by or is under common control with the person specified.

3. "Bona fide employee" of the title insurer or title insurance agent means an individual who devotes substantially all of his or her time to performing services on behalf of a title insurer or title insurance agent and whose compensation for those services is in the form of salary or its equivalent paid by the title insurer or title insurance agent.

4. "Control" (including the terms "controlling," "controlled by" and "under common control with") means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of another person. This presumption can be overcome by predominant evidence to the contrary, however, it shall stand until overcome by such predominant contradictory evidence.

5. "Escrow" means written instruments, money or other items deposited by one party with a depository, escrow agent or escrowee for delivery to another party upon the performance of a specified condition or the happening of a certain event.

6. "Escrow, settlement or closing fee" means the consideration for supervising or handling the actual execution, delivery or recording of transfer and lien documents and for disbursing funds.

7. "Net retained liability" means the total liability retained by a title insurer for a single risk, after taking into account any ceded liability and collateral, acceptable to the commissioner, maintained by the insurer.

8. "Person" means any natural person, partnership, association, cooperative, corporation, trust or other legal entity.

9. "Security" or "security deposit" means funds or other property received by the title insurer as collateral to secure an indemnitor's obligation under an indemnity agreement pursuant to which the insurer is granted a perfected security interest in the collateral in exchange for agreeing to provide coverage in a title insurance policy for a specific title exception to coverage.
10. “Title insurance agent” or “agent” means an authorized person, other than a bona fide employee of the title insurer who, on behalf of the title insurer, performs the following acts, in conjunction with the issuance of a title insurance report or policy:

   a. Determines insurability and issues title insurance reports or policies, or both, based upon the performance or review of a search or abstract of title; and

   b. Performs one or more of the following functions:

      i. Collects or disburses premiums, escrow or security deposits or other funds;

      ii. Handles escrows, settlements or closings;

      iii. Solicits or negotiates title insurance business; or

      iv. Records closing documents.

11. “Title insurance business” or “business of title insurance” means:

   a. Issuing as insurer or offering to issue as insurer a title insurance policy;

   b. Transacting or proposing to transact by a title insurer any of the following activities when conducted or performed in contemplation of or in conjunction with the issuance of a title insurance policy:

      i. Soliciting or negotiating the issuance of a title insurance policy;

      ii. Guaranteeing, warranting or otherwise insuring the correctness of title searches for all instruments affecting titles to real property, any interest in real property, cooperative units and proprietary leases and for all liens or charges affecting the same;

      iii. Handling of escrows, settlements or closings;

      iv. Executing title insurance policies;

      v. Effecting contracts of reinsurance; or

      vi. Abstracting, searching or examining titles;

   c. Guaranteeing, warranting or insuring searches or examinations of title to real property or any interest in real property; or

   d. Guaranteeing or warranting the status of title as to ownership of or liens on real property and personal property by any person other than the principals to the transaction; or

   e. Doing or proposing to do any business substantially equivalent to any of the activities listed in this paragraph in a manner designed to evade the provisions of this Appendix.

12. “Title insurance policy” or “policy” means a contract insuring or indemnifying owners of, or other persons lawfully interested in, real or personal property or any interest in real property, against loss or damage arising from any or all of the following conditions existing on or before the policy date and not excepted or excluded:

   a. Defects in or liens or encumbrances on the insured title;
b. Unmarketability of the insured title;

c. Invalidity, lack of priority or unenforceability of liens or encumbrances on the stated property;

d. Lack of legal right of access to the land; or

e. Unenforceability of rights in title to the land.

13. "Title insurance report" or "report" means a preliminary report, commitment or binder issued prior to the issuance of a title insurance policy containing the terms, conditions, exceptions and any other matters incorporated by reference under which the title insurer is willing to issue its title insurance policy.

14. "Title insurer" or "insurer" means a company organized for the purpose of transacting the business of title insurance.

15. "Title plant" means a set of records consisting of documents, maps, surveys or entries affecting title to real property or any interest in or encumbrance on the property, which have been filed or recorded in the jurisdiction for which the title plant is established or maintained.

Admitted Asset Standards

16. An investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate amount of the investment shall not exceed the lesser of twenty percent (20%) of admitted assets or forty percent (40%) of surplus to policyholders, both as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner; if the amount of the investment exceeds the above limits, the excess amount shall be recorded as a nonadmitted asset.

Reserves

17. A title insurer shall establish and maintain:

a. A known claim reserve in an amount estimated to be sufficient to cover all unpaid losses, claims and allocated loss adjustment expenses arising under title insurance policies, guaranteed certificates of title, guaranteed searches and guaranteed abstracts of title, and all unpaid losses, claims and allocated loss adjustment expenses for which the title insurer may be liable, and for which the insurer has received notice by or on behalf of the insured, holder of a guarantee or escrow or security depositor.

b. A Statutory or Unearned Premium Reserve consisting of:

i. The amount of the statutory or unearned premium or reinsurance reserve legally held at the effective date of this codification, which balance shall be released in accordance with the law in effect at the time such sums were added to the reserve; and

ii. Out of total charges for policies of title insurance written or assumed until December 31, 1997 (if required by state law prior to the effective date of this codification), a title insurer shall add to and set aside in this reserve an amount equal a percentage amount determined by the insurer's state of domicile to the sum of the following items set forth in the title insurer's most recent annual statement on file:
(a) Direct premiums written;
(b) Escrow and settlement service fees;
(c) Other title fees and service charges including fees for closing protection letters; and
(d) Premiums for reinsurance assumed less premiums for reinsurance ceded during year.

Additions to the reserve after the earlier of January 1, 1998 (if required by state law prior to the effective date of this codification) or the effective date of this codification shall be made out of total charges for title insurance policies and guarantees written, equal to the sum of the following items, as set forth in the title insurer’s most recent annual statement:

(a) For each title insurance policy on a single risk written or assumed after the earlier of January 1, 1998 (if required by state law prior to the effective date of this codification) or the effective date of this codification, an amount as determined by the insurer’s state of domicile per $1,000 of net retained liability for policies under $500,000 and an amount as determined by the insurer’s state of domicile per $1,000 of net retained liability for policies of $500,000 or greater, or any other reasonable method as required by the insurer’s state of domicile; and

(b) An amount as determined by the insurer’s state of domicile of escrow, settlement and closing fees collected in contemplation of the issuance of title insurance policies or guarantees.

The aggregate of the amounts set aside in this reserve in any calendar year pursuant to subparagraphs b. ii. and b. iii. shall be released from the reserve and restored to net profits over a period of twenty (20) years pursuant to the following formula: thirty-five percent (35%) of the aggregate sum on July 1 of the year next succeeding the year of addition; fifteen percent (15%) of the aggregate sum on July 1 of each of the succeeding two (2) years; ten percent (10%) of the aggregate sum on July 1 of the next succeeding year; three percent (3%) of the aggregate sum on July 1 of each of the next three (3) succeeding years; two percent (2%) of the aggregate sum on July 1 of each of the next three (3) succeeding years; and one percent (1%) of the aggregate sum on July 1 of each of the next succeeding ten (10) years.

The insurer shall calculate an adjusted statutory or unearned premium reserve as of the year of first application of Subsections b. ii. through b. iii. The adjusted reserve shall be calculated as if Subsections b. ii. through b. iii. of this section had been in effect for all years beginning twenty (20) years prior to the year of first application of Subsections b. ii. through b. iii. For purposes of this calculation, the balance of the reserve as of that date shall be deemed to be zero. If the adjusted reserve so calculated exceeds the aggregate amount set aside for statutory or unearned premiums in the insurer’s annual statement on file, the insurer shall, out of total charges for policies of title insurance, increase its statutory or unearned premium reserve by an amount equal to one-sixth of that excess in each of the succeeding six years, commencing with the calendar year that includes the year of first application of subparagraphs b. ii. through b. iv., until the entire excess has been added.
vi. The aggregate of the amounts set aside in this reserve in any calendar year as adjustments to the insurer's statutory or unearned premium reserve pursuant to Subsection b. v. shall be released from the reserve and restored to net profits, or equity if the additions required by subparagraph b. v. of this section reduced equity directly, over a period not exceeding ten (10) years pursuant to the following table:

<table>
<thead>
<tr>
<th>Year of Addition</th>
<th>Release</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1*</td>
<td>Equally over 10 years</td>
</tr>
<tr>
<td>Year 2</td>
<td>Equally over 9 years</td>
</tr>
<tr>
<td>Year 3</td>
<td>Equally over 8 years</td>
</tr>
<tr>
<td>Year 4</td>
<td>Equally over 7 years</td>
</tr>
<tr>
<td>Year 5</td>
<td>Equally over 6 years</td>
</tr>
<tr>
<td>Year 6</td>
<td>Equally over 5 years</td>
</tr>
</tbody>
</table>

* (The calendar year following the year of first application of subparagraphs b. ii. through b. iv.).

c. A supplemental reserve shall be established consisting of any other reserves necessary, when taken in combination with the reserves required by Subsections a. and b. of this paragraph, to cover the company's liabilities with respect to all losses, claims and loss adjustment expenses.
Appendix A-630

Mortgage Guaranty Insurance

Definitions

1. "Mortgage guaranty insurance" is:
   a. Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, provided the improvement on such real estate is a residential building or a condominium unit or buildings designed for occupancy by not more than four families.
   b. Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, providing the improvement on such real estate is a building or buildings designed for occupancy by five (5) or more families or designed to be occupied for industrial or commercial purposes.
   c. Insurance against financial loss by reason of nonpayment of rent or other sums agreed to be paid under the terms of a written lease for the possession, use or occupancy of real estate, provided the improvement on such real estate is a building or buildings designed to be occupied for industrial or commercial purposes.

2. "Authorized real estate security" for the purpose of this Appendix means an amortized note, bond or other evidence of indebtedness, not exceeding ninety-five percent (95%) of the fair market value of the real estate, secured by a mortgage, deed of trust, or other instrument which constitutes, or is equivalent to, a first lien or charge on real estate; provided:
   a. The real estate loan secured in such manner is one of a type which a bank, savings and loan association, or an insurance company, which is supervised and regulated by a state department or the federal government, is authorized to make, or would be authorized to make, disregarding any requirement applicable to such an institution that the amount of the loan not exceed a certain percentage of the value of the real estate.
   b. The improvement on such real estate is a building or buildings designed for occupancy as specified by paragraphs 1.a. and 1.b. of this Appendix.
   c. The lien on such real estate may be subject to and subordinate to the following:
      i. The lien of any public bond, assessment or tax, when no installment, call or payment of or under such bond, assessment or tax is delinquent.
      ii. Outstanding mineral, oil, water or timber rights, rights-of-way, easements or rights-of-way of support, sewer rights, building restrictions or other restrictions or covenants, conditions or regulations of use, or outstanding leases upon such real property under which rents or profits are reserved to the owner thereof.
3. "Contingency reserve" means an additional premium reserve established to protect policyholders against the effect of adverse economic cycles.

Investment Limitation

4. A mortgage guaranty insurance company shall not report as an admitted asset notes or other evidences of indebtedness secured by mortgage or other lien upon real property. This provision shall not apply to obligations secured by real property, or contracts for the sale of real property, which obligations or contracts of sale are acquired in the course of the good faith settlement of claims under policies of insurance issued by the mortgage guaranty insurance company, or in the good faith disposition of real property so acquired.

Reserves

5. Unearned Premium Reserves - A mortgage guaranty insurance company shall compute and maintain an unearned premium reserve.

6. Loss Reserve - A mortgage guaranty insurance company shall compute and maintain adequate case basis and other loss reserves which accurately reflect loss frequency and loss severity and shall include components for claims reported and for claims incurred but not reported, including estimated losses on:

   a. Insured loans which have resulted in the conveyance of property which remains unsold;

   b. Insured loans in the process of foreclosure;

   c. Insured loans in default for four (4) months or for any lesser period which is defined as default for such purposes in the policy provisions; and

   d. Insured leases in default for four (4) months or for any lesser period which is defined as default for such purposes in policy provisions.

7. Contingency Reserve

Each mortgage guaranty insurance company shall compute and maintain a contingency reserve.

8. Reinsurance

Whenever a mortgage guaranty insurance company obtains reinsurance from an insurance company which is properly licensed to provide such reinsurance or from an appropriate governmental agency, the mortgage guaranty insurer and the reinsurer shall establish and maintain the reserves required in this Appendix in appropriate proportions in relation to the risk retained by the original insurer and ceded to the assuming reinsurer so that the total reserves established shall not be less than the reserves required by this Appendix.
Appendix A-641

Long-Term Care Insurance

Definitions

1. "Long-term care insurance" means any insurance policy or rider advertised, marketed, offered or designed to provide coverage for not less than twelve (12) consecutive months for each covered person on an expense incurred, indemnity, prepaid or other basis; for one or more necessary or medically necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Such term includes group and individual annuities and life insurance policies or riders which provide directly or which supplement long-term care insurance. Such term also includes a policy or rider which provides for payment of benefits based upon cognitive impairment or the loss of functional capacity. Long-term care insurance may be issued by insurers; fraternal benefit societies; nonprofit health, hospital, and medical service corporations; prepaid health plans; health maintenance organizations or any similar organization to the extent they are otherwise authorized to issue life or health insurance. Long-term care insurance shall not include any insurance policy which is offered primarily to provide basic Medicare supplement coverage, basic hospital expense coverage, basic medical-surgical expense coverage, hospital confinement indemnity coverage, major medical expense coverage, disability income or related asset-protection coverage, accident only coverage, specified disease or specified accident coverage, or limited benefit health coverage. With regard to life insurance, this term does not include life insurance policies which accelerate the death benefit specifically for one or more of the qualifying events of terminal illness, medical conditions requiring extraordinary medical intervention, or permanent institutional confinement, and which provide the option of a lump-sum payment for those benefits and in which neither the benefits nor the eligibility for the benefits is conditioned upon the receipt of long-term care. Notwithstanding any other provision contained herein, any product advertised, marketed or offered as long-term care insurance shall be subject to the provisions of this Appendix.

2. “Applicant” means:
   a. In the case of an individual long-term care insurance policy, the person who seeks to contract for benefits, and
   b. In the case of a group long-term care insurance policy, the proposed certificate holder.

3. “Certificate” means, for the purposes of this Appendix, any certificate issued under a group long-term care insurance policy, which policy has been delivered or issued for delivery.

4. “Group long-term care insurance” means a long-term care insurance policy which is delivered or issued for delivery to:
   a. One or more employers or labor organizations, or to a trust or to the trustees of a fund established by one or more employers or labor organizations, or a combination thereof, for employees or former employees or a combination thereof or for members or former members or a combination thereof, of the labor organizations; or
Appendix A

b. Any professional, trade or occupational association for its members or former or retired members, or combination thereof, if such association:

i. Is composed of individuals all of whom are or were actively engaged in the same profession, trade or occupation; and

ii. Has been maintained in good faith for purposes other than obtaining insurance; or

c. An association or a trust or the trustee(s) of a fund established, created or maintained for the benefit of members of one or more associations. Prior to advertising, marketing or offering such policy, the association or associations, or the insurer of the association or associations, shall evidence that the association or associations have at the outset a minimum of 100 persons and have been organized and maintained in good faith for purposes other than that of obtaining insurance; have been in active existence for at least one year; and have a constitution and bylaws which provide that:

i. The association or associations hold regular meetings not less than annually to further purposes of the members;

ii. Except for credit unions, the association or associations collect dues or solicit contributions from members; and

iii. The members have voting privileges and representation on the governing board and committees.

Valuation Requirements

5. “Policy” means, for the purposes of this Appendix, any policy, contract, subscriber agreement, rider or endorsement delivered or issued for delivery by an insurer; fraternal benefit society; nonprofit health, hospital, or medical service corporation; prepaid health plan; health maintenance organization or any similar organization.

6. When long-term care benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves for the benefits shall be determined in accordance with Appendix A-820. Claim reserves shall also be established in the case when the policy or rider is in claim status.

7. Reserves for policies and riders subject to this Appendix should be based on the multiple decrement model utilizing all relevant decrements except for voluntary termination rates. Single decrement approximations are acceptable if the calculation produces essentially similar reserves, if the reserve is clearly more conservative, or if the reserve is immaterial. The calculations may take into account the reduction in life insurance benefits due to the payment of long-term care benefits. However, in no event shall the reserves for the long-term care benefit and the life insurance benefit be less than the reserves for the life insurance benefit assuming no long-term care benefit.
8. In the development and calculation of reserves for policies and riders subject to this Appendix, due regard shall be given to the applicable policy provisions, marketing methods, administrative procedures and all other considerations which have an impact on projected claim costs, including, but not limited to, the following:

   a. Definition of insured events;
   b. Covered long-term care facilities;
   c. Existence of home convalescence care coverage;
   d. Definition of facilities;
   e. Existence or absence of barriers to eligibility;
   f. Premium waiver provision;
   g. Renewability;
   h. Ability to raise premiums;
   i. Marketing method;
   j. Underwriting procedures;
   k. Claims adjustment procedures;
   l. Waiting period;
   m. Maximum benefit;
   n. Availability of eligible facilities;
   o. Margins in claim costs;
   p. Optional nature of benefit;
   q. Delay in eligibility for benefit;
   r. Inflation protection provisions; and
   s. Guaranteed insurability option.

9. When long-term care benefits are provided other than as in the above, reserves shall be determined in accordance with Appendix A-010.
Appendix A-785

Credit For Reinsurance

Definitions

1. “Commissioner” refers to the commissioner of insurance in the state where credit or a reduction from liability is taken.

2. “Jurisdiction” refers to any state, district or territory of the United States and also to territories, provinces or jurisdictions other than the United States.

3. “Liabilities” shall mean the assuming insurer’s gross liabilities attributable to reinsurance ceded by U.S. domiciled insurers that are not otherwise secured by acceptable means.

4. “Beneficiary” means the entity for whose sole benefit the trust has been established and any successor of the beneficiary by operation of law. If a court of law appoints a successor in interest to the named beneficiary, then the named beneficiary includes and is limited to the court appointed domiciliary receiver (including conservator, rehabilitator or liquidator).

5. “Grantor” means the entity that has established a trust for the sole benefit of the beneficiary. When established in conjunction with a reinsurance agreement, the grantor is the unlicensed, unaccredited assuming insurer.

6. “Obligations,” as used in paragraph 27 of this Appendix means:
   a. Reinsured losses and allocated loss expenses paid by the ceding company, but not recovered from the assuming insurer;
   b. Reserves for reinsured losses reported and outstanding;
   c. Reserves for reinsured losses incurred but not reported; and
   d. Reserves for allocated reinsured loss expenses and unearned premiums.

Credit Allowed a Domestic Ceding Insurer

7. Credit for reinsurance shall be allowed a domestic ceding insurer as either an asset or a reduction from liability on account of reinsurance ceded only when the reinsurer meets the requirements of paragraphs 8, 9, 10, 11 or 12 of this Appendix. Credit shall be allowed under paragraphs 8, 9, or 10 of this Appendix only as respects cessions of those kinds or classes of business which the assuming insurer is licensed or otherwise allowed to write or assume in its state of domicile or, in the case of a U.S. branch of an alien assuming insurer, in the state through which it is entered and licensed to transact insurance or reinsurance. Credit shall be allowed under paragraphs 10 or 11 of this Appendix only if the applicable requirements of paragraph 13 have been satisfied.

8. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is licensed to transact insurance or reinsurance in the domiciliary state of the ceding insurer.
9. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is accredited as a reinsurer in the domiciliary state of the ceding insurer. An accredited reinsurer is one that:

a. Files with the commissioner evidence of its submission to the domiciliary state’s jurisdiction;

b. Submits to the domiciliary state’s authority to examine its books and records;

c. Is licensed to transact insurance or reinsurance in at least one state, or in the case of a U.S. branch of an alien assuming insurer, is entered through and licensed to transact insurance or reinsurance in at least one state;

d. Files annually with the commissioner a copy of its annual statement filed with the insurance department of its state of domicile and a copy of its most recent audited financial statement; and

i. Maintains a surplus as regards policyholders in an amount not less than $20,000,000 and whose accreditation has not been denied by the commissioner within ninety (90) days of its submission; or

ii. Maintains a surplus as regards policyholders in an amount less than $20,000,000 and whose accreditation has been approved by the commissioner.

e. Credit shall not be allowed a domestic ceding insurer if the assuming insurer’s accreditation has been revoked by the commissioner.

10. a. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is domiciled in, or in the case of a U.S. branch of an alien assuming insurer is entered through, a state that employs standards regarding credit for reinsurance substantially similar to those of the domiciliary state of the ceding insurer and the assuming insurer or U.S. branch of an alien assuming insurer:

i. Maintains a surplus as regards policyholders in an amount not less than $20,000,000; and

ii. Submits to the authority of the domiciliary state to examine its books and records.

b. The requirement of paragraph 10 a. i. does not apply to reinsurance ceded and assumed pursuant to pooling arrangements among insurers in the same holding company system.

11. a. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that maintains a trust fund in a qualified U.S. financial institution, as defined in paragraph 51, for the payment of the valid claims of its U.S. ceding insurers, their assigns and successors in interest. The assuming insurer shall report annually information substantially the same as that required to be reported on the NAIC Annual Statement form by licensed insurers. The assuming insurer shall submit to examination of its books and records by the commissioner and bear the expense of examination.

b. i. Credit for reinsurance shall not be granted under this paragraph 11 unless the form of the trust and any amendments to the trust have been approved by:

(a) The commissioner of the state where the trust is domiciled; or

(b) The commissioner of another state who, pursuant to the terms of the trust instrument, has accepted principal regulatory oversight of the trust.

ii. The trust instrument shall provide that:
(a) Contested claims shall be valid and enforceable out of funds in trust to the extent remaining unsatisfied thirty (30) days after entry of the final order of any court of competent jurisdiction in the United States;

(b) Legal title to the assets of the trust shall be vested in the trustee for the benefit of the grantor's U.S. ceding insurers, their assigns and successors in interest;

(c) The trust shall be subject to examination as determined by the commissioner;

(d) The trust shall remain in effect for as long as the assuming insurer, or any member or former member of a group of insurers, shall have outstanding obligations under reinsurance agreements subject to the trust; and

(e) No later than February 28 of each year the trustee of the trust shall report to the commissioner in writing setting forth the balance in the trust and listing the trust's investments at the preceding year-end, and shall certify the date of termination of the trust, if so planned, or certify that the trust shall not expire prior to the following December 31.

c. The following requirements apply to the following categories of assuming insurer:

i. The trust fund for a single assuming insurer shall consist of funds in trust in an amount not less than the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers, and, in addition, the assuming insurer shall maintain a trusteeed surplus of not less than $20,000,000.

ii. (a) In the case of a group including incorporated and individual unincorporated underwriters:

   (1) For reinsurance ceded under reinsurance agreements with an inception, amendment or renewal date on or after August 1, 1995, the trust shall consist of a trusteeed account in an amount not less than the group's several liabilities attributable to business ceded by U.S. domiciled ceding insurers to any member of the group;

   (2) For reinsurance ceded under reinsurance agreements with an inception date on or before July 31, 1995, and not amended or renewed after that date, notwithstanding the other provisions contained herein, the trust shall consist of a trusteeed account in an amount not less than the group's several insurance and reinsurance liabilities attributable to business written in the United States; and

   (3) In addition to these trusts, the group shall maintain in trust a trusteeed surplus of which $100,000,000 shall be held jointly for the benefit of the U.S. domiciled ceding insurers of any member of the group for all years of account; and

(b) The incorporated members of the group shall not be engaged in any business other than underwriting as a member of the group and shall be subject to the same level of regulation and solvency control by the group's domiciliary regulator as are the unincorporated members.
iii. In the case of a group of incorporated underwriters under common administration, the group shall:

   (a) Have continuously transacted an insurance business outside the United States for at least three (3) years immediately prior to making application for accreditation;

   (b) Maintain aggregate policyholders' surplus of at least $10,000,000,000;

   (c) Maintain a trust fund in an amount not less than the group's several liabilities attributable to business ceded by U.S. domiciled ceding insurers to any member of the group pursuant to reinsurance contracts issued in the name of the group;

   (d) In addition, maintain a joint trusteed surplus of which $100,000,000 shall be held jointly for the benefit of U.S. domiciled ceding insurers of any member of the group as additional security for these liabilities; and

   (e) Within ninety (90) days after its financial statements are due to be filed with the group's domiciliary regulator, make available to the commissioner an annual certification of each underwriter member's solvency by the member's domiciliary regulator and financial statements of each underwriter member of the group prepared by its independent public accountant.

d. Liabilities shall include:

   i. For business ceded by domestic insurers authorized to write accident and health, and property and casualty insurance:

      (a) Losses and allocated loss expenses paid by the ceding insurer, recoverable from the assuming insurer;

      (b) Reserves for losses reported and outstanding;

      (c) Reserves for losses incurred but not reported;

      (d) Reserves for allocated loss expenses; and

      (e) Unearned premiums.

   ii. For business ceded by domestic insurers authorized to write life, health and annuity insurance:

      (a) Aggregate reserves for life policies and contracts net of policy loans and net due and deferred premiums;

      (b) Aggregate reserves for accident and health policies;

      (c) Deposit funds and other liabilities without life or disability contingencies; and

      (d) Liabilities for policy and contract claims.
12. Credit shall be allowed when the reinsurance is ceded to an assuming insurer not meeting the requirements of paragraphs 8, 9, 10, or 11 of this Appendix, but only as to the insurance of risks located in jurisdictions where the reinsurance is required by applicable law or regulation of that jurisdiction.

13. If the assuming insurer is not licensed or accredited to transact insurance or reinsurance in the domiciliary state of the ceding insurer, the credit allowed by paragraphs 10 and 11 of this Appendix shall not be allowed unless the assuming insurer agrees in the reinsurance agreements:

   a. (i.) That in the event of the failure of the assuming insurer to perform its obligations under the terms of the reinsurance agreement, the assuming insurer, at the request of the ceding insurer, shall submit to the jurisdiction of any court of competent jurisdiction in any state of the United States, will comply with all requirements necessary to give the court jurisdiction, and will abide by the final decision of the court or of any appellate court in the event of an appeal; and (ii.) To designate the commissioner or a designated attorney as its true and lawful attorney upon whom may be served any lawful process in any action, suit or proceeding instituted by or on behalf of the ceding company.

   b. This paragraph 13 is not intended to conflict with or override the obligation of the parties to a reinsurance agreement to arbitrate their disputes, if this obligation is created in the agreement.

14. If the assuming insurer does not meet the requirements of paragraphs 8, 9, or 10, the credit allowed by paragraph 11 of this Appendix shall not be allowed unless the assuming insurer agrees in the trust agreements to the following conditions:

   a. Notwithstanding any other provisions in the trust instrument, if the trust fund is inadequate because it contains an amount less than the amount required by paragraph 11 c. of this Appendix, or if the grantor of the trust has been declared insolvent or placed into receivership, rehabilitation, liquidation or similar proceedings under the laws of its state or country of domicile, the trustee shall comply with an order of the commissioner with regulatory oversight over the trust or with an order of a court of competent jurisdiction directing the trustee to transfer to the commissioner with regulatory oversight all of the assets of the trust fund.

   b. The assets shall be distributed by and claims shall be filed with and valued by the commissioner with regulatory oversight in accordance with the laws of the state in which the trust is domiciled that are applicable to the liquidation of domestic insurance companies.

   c. If the commissioner with regulatory oversight determines that the assets of the trust fund or any part thereof are not necessary to satisfy the claims of the U.S. ceding insurers of the grantor of the trust, the assets or part thereof shall be returned by the commissioner with regulatory oversight to the trustee for distribution in accordance with the trust agreement.

   d. The grantor shall waive any right otherwise available to it under U.S. law that is inconsistent with this provision.
Valuation of and Requirements for Trust Assets

15. Assets deposited in the trust shall be valued according to their fair market value and shall consist only of cash in U. S. dollars, certificates of deposit issued by a U. S. financial institution as defined in paragraph 50, and investments of the type specified in this paragraph, but investments in or issued by an entity controlling, controlled by or under common control with either the grantor or beneficiary of the trust shall not exceed five percent (5%) of total investments. No more than twenty percent (20%) of the total of the investments in the trust may be foreign investments authorized under paragraphs 15 a. v., c, f. ii. or g. of this paragraph, and no more than ten percent (10%) of the total of the investments in the trust may be securities denominated in foreign currencies. For purposes of applying the preceding sentence, a depository receipt denominated in U. S. dollars and representing rights conferred by a foreign security shall be classified as a foreign investment denominated in a foreign currency. The assets of a trust shall be invested only as follows:

a. Government obligations that are not in default as to principal or interest, that are valid and legally authorized and that are issued, assumed or guaranteed by:

i. The United States or by any agency or instrumentality of the United States;

ii. A state of the United States;

iii. A territory, possession or other governmental unit of the United States;

iv. An agency or instrumentality of a governmental unit referred to in paragraphs 15 a. i. and 15 a. ii. if the obligations shall be by law (statutory or otherwise) payable, as to both principal and interest, from taxes levied or by law required to be levied or from adequate special revenues pledged or otherwise appropriated or by law required to be provided for making these payments, but shall not be obligations eligible for investment under this paragraph if payable solely out of special assessments on properties benefited by local improvements; or

v. The government of any other country that is a member of the Organization for Economic Cooperation and Development and whose government obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC;

b. Obligations that are issued in the United States, or that are dollar denominated and issued in a non-U.S. market, by a solvent U. S. institution (other than an insurance company) or that are assumed or guaranteed by a solvent U. S. institution (other than an insurance company) and that are not in default as to principal or interest if the obligations:

i. Are rated A or higher (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC, or if not so rated, are similar in structure and other material respects to other obligations of the same institution that are so rated;

ii. Are insured by at least one authorized insurer (other than the investing insurer or a parent, subsidiary or affiliate of the investing insurer) licensed to insure obligations in this state and, after considering the insurance, are rated AAA (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC; or

iii. Have been designated as Class One or Class Two by the Securities Valuation Office of the NAIC;

c. Obligations issued, assumed or guaranteed by a solvent non U. S. institution chartered in a country that is a member of the Organization for Economic Cooperation and
Development or obligations of U.S. corporations issued in a non-U.S. currency, provided that in either case the obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC;

d. An investment made pursuant to the provisions of paragraph 15 a. b. or c. shall be subject to the following additional limitations:

i. An investment in or loan upon the obligations of an institution other than an institution that issues mortgage-related securities shall not exceed five percent (5%) of the assets of the trust;

ii. An investment in any one mortgage-related security shall not exceed five percent (5%) of the assets of the trust;

iii. The aggregate total investment in mortgage-related securities shall not exceed twenty-five percent (25%) of the assets of the trust; and

iv. Preferred or guaranteed shares issued or guaranteed by a solvent U. S. institution are permissible investments if all of the institution’s obligations are eligible as investments under paragraphs 15 b. i. and b. iii. of this paragraph, but shall not exceed two percent (2%) of the assets of the trust.

e. As used in this appendix:

i. “Mortgage-related security” means an obligation that is rated AA or higher (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC and that either:

   (a) Represents ownership of one or more promissory notes or certificates of interest or participation in the notes (including any rights designed to assure servicing of, or the receipt or timeliness of receipt by the holders of the notes, certificates, or participation of amounts payable under, the notes, certificates or participation), that:

      (1) Are directly secured by a first lien on a single parcel of real estate, including stock allocated to a dwelling unit in a residential cooperative housing corporation, upon which is located a dwelling or mixed residential and commercial structure, or on a residential manufactured home as defined in 42 U.S.C.A. Section 5402(6), whether the manufactured home is considered real or personal property under the laws of the state in which it is located; and

      (2) Were originated by a savings and loan association, savings bank, commercial bank, credit union, insurance company, or similar institution that is supervised and examined by a federal or state housing authority, or by a mortgagee approved by the Secretary of Housing and Urban Development pursuant to 12 U.S.C.A. Sections 1709 and 1715-b, or, where the notes involve a lien on the manufactured home, by an institution or by a financial institution approved for insurance by the Secretary of Housing and Urban Development pursuant to 12 U.S.C.A. Section 1703; or

   (b) Is secured by one or more promissory notes or certificates of deposit or participations in the notes (with or without recourse to the insurer of the notes) and, by its terms, provides for payments of principal in relation to
payments, or reasonable projections of payments, or notes meeting the requirements of paragraphs 15 e. i. (a) (1) and 15 e. i. (a) (2);

ii. "Promissory note," when used in connection with a manufactured home, shall also include a loan, advance or credit sale as evidenced by a retail installment sales contract or other instrument.

g. Equity interests

i. Investments in common shares or partnership interests of a solvent U.S. institution are permissible if:

(a) Its obligations and preferred shares, if any, are eligible as investments under this paragraph; and

(b) The equity interests of the institution (except an insurance company) are registered on a national securities exchange as provided in the Securities Exchange Act of 1934, 15 U.S.C. §§ 78a to 78kk or otherwise registered pursuant to that Act, and if otherwise registered, price quotations for them are furnished through a nationwide automated quotations system approved by the National Association of Securities Dealers, Inc. A trust shall not invest in equity interests under this paragraph an amount exceeding one percent (1%) of the assets of the trust even though the equity interests are not so registered and are not issued by an insurance company.

ii. Investments in common shares of a solvent institution organized under the laws of a country that is a member of the Organization for Economic Cooperation and Development, if:

(a) All its obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC; and

(b) The equity interests of the institution are registered on a securities exchange regulated by the government of a country that is a member of the Organization for Economic Cooperation and Development.

iii. An investment in or loan upon any one institution’s outstanding equity interests shall not exceed one percent (1%) of the assets of the trust. The cost of an investment in equity interests made pursuant to this paragraph, when added to the aggregate cost of other investments in equity interests then held pursuant to this paragraph, shall not exceed ten percent (10%) of the assets in the trust;

h. Investment companies:

i. Securities of an investment company registered pursuant to the Investment Company Act of 1940, 15 U.S.C. § 802, are allowable investments if the investment company:

(a) Invests at least ninety percent (90%) of its assets in the types of securities that qualify as an investment under paragraphs 15 a., 15 b., or 15 c., or invests in securities that are determined to be substantively similar to the types of securities set forth in paragraphs 15 a., 15 b., or 15 c.; or
(b) Invests at least ninety percent (90%) of its assets in the types of equity interests that qualify as an investment under paragraph 15 f. i.;

ii. Investments made by a trust in investment companies under this paragraph shall not exceed the following limitations:

(a) An investment in an investment company qualifying under paragraph 15 h. i. (a) shall not exceed ten percent (10%) of the assets in the trust and the aggregate amount of investment in qualifying investment companies shall not exceed twenty-five percent (25%) of the assets in the trust; and

(b) Investments in an investment company qualifying under paragraph 15 h. i. (b) of this paragraph shall not exceed five percent (5%) of the assets in the trust and the aggregate amount of investment in qualifying investment companies shall be included when calculating the permissible aggregate value of equity interests pursuant to paragraph 15 f. i.

Asset or Reduction from Liability for Reinsurance Ceded by a Domestic Insurer to an Assuming Insurer not Meeting the Requirements detailed above under “Credit Allowed a Domestic Ceding Insurer” (paragraphs 7 through 15)

16. An asset or a reduction from liability for the reinsurance ceded by a domestic insurer to an assuming insurer not meeting the requirements under “Credit Allowed a Domestic Ceding Insurer” (paragraphs 7 through 15) shall be allowed in an amount not exceeding the liabilities carried by the ceding insurer. The reduction shall be in the amount of funds held by or on behalf of the ceding insurer, including funds held in trust for the ceding insurer, under a reinsurance contract with the assuming insurer as security for the payment of obligations thereunder, if the security is held in the United States subject to withdrawal solely by, and under the exclusive control of, the ceding insurer; or, in the case of a trust, held in a qualified U.S. financial institution, as defined under “Qualified U.S. Financial Institutions” at paragraph 51. This security may be in the form of:

a. Cash;

b. Securities listed by the Securities Valuation Office of the National Association of Insurance Commissioners and qualifying as admitted assets;

c. i. Clean, irrevocable, unconditional and evergreen letters of credit, issued or confirmed by a qualified U.S. financial institution, as defined in paragraph 50, effective no later than December 31 of the year for which the filing is being made, and in the possession of, or in trust for, the ceding company on or before the filing date of its annual statement;

ii. Letters of credit meeting applicable standards of issuer acceptability as of the dates of their issuance (or confirmation) shall, notwithstanding the issuing (or confirming) institution’s subsequent failure to meet applicable standards of issuer acceptability, continue to be acceptable as security until their expiration, extension, renewal, modification or amendment, whichever first occurs.

d. An admitted asset or a reduction from liability for reinsurance ceded to an unauthorized assuming insurer pursuant to this Appendix shall be allowed only when the requirements of paragraph 13 and the applicable portions under the sections below titled “Trust Agreements Qualified under Paragraph 16”, “Letters of Credit Qualified under Paragraph 16”, and “Other Security” at paragraph 49.
Trust Agreements Qualified under Paragraph 16

17. The trust agreement shall be entered into between the beneficiary, the grantor and a trustee, which shall be a qualified United States financial institution as defined in paragraph 51.

18. The trust agreement shall create a trust account into which assets shall be deposited.

19. All assets in the trust account shall be held by the trustee at the trustee’s office in the United States.

20. The trust agreement shall provide that:

   a. The beneficiary shall have the right to withdraw assets from the trust account at any time, without notice to the grantor, subject only to written notice from the beneficiary to the trustee;

   b. No other statement or document is required to be presented to withdraw assets, except that the beneficiary may be required to acknowledge receipt of withdrawn assets;

   c. It is not subject to any conditions or qualifications outside of the trust agreement; and

   d. It shall not contain references to any other agreements or documents except as provided for in paragraph 27.

21. The trust agreement shall be established for the sole benefit of the beneficiary.

22. The trust agreement shall require the trustee to:

   a. Receive assets and hold all assets in a safe place;

   b. Determine that all assets are in such form that the beneficiary, or the trustee upon direction by the beneficiary, may whenever necessary negotiate any such assets, without consent or signature from the grantor or any other person or entity;

   c. Furnish to the grantor and the beneficiary a statement of all assets in the trust account upon its inception and at intervals no less frequent than the end of each calendar quarter;

   d. Notify the grantor and the beneficiary within ten (10) days, of any deposits to or withdrawals from the trust account;

   e. Upon written demand of the beneficiary, immediately take any and all steps necessary to transfer absolutely and unequivocally all right, title and interest in the assets held in the trust account to the beneficiary and deliver physical custody of the assets to the beneficiary; and

   f. Allow no substitutions or withdrawals of assets from the trust account, except on written instructions from the beneficiary, except that the trustee may, without the consent of but with notice to the beneficiary, upon call or maturity of any trust asset, withdraw such asset upon condition that the proceeds are paid into the trust account.

23. The trust agreement shall provide that at least thirty (30) days, but not more than forty-five (45) days, prior to termination of the trust account, written notification of termination shall be delivered by the trustee to the beneficiary.

24. The trust agreement shall be made subject to and governed by the laws of the state in which the trust is domiciled.
25. The trust agreement shall prohibit invasion of the trust corpus for the purpose of paying compensation to, or reimbursing the expenses of, the trustee.

26. The trust agreement shall provide that the trustee shall be liable for its negligence, willful misconduct or lack of good faith.

27. Notwithstanding other provisions of this Appendix, when a trust agreement is established in conjunction with a reinsurance agreement covering risks other than life, annuities and accident and health, where it is customary practice to provide a trust agreement for a specific purpose, the trust agreement may provide that the ceding insurer shall undertake to use and apply amounts drawn upon the trust account, without diminution because of the insolvency of the ceding insurer or the assuming insurer, only for the following purposes:

a. To pay or reimburse the ceding insurer for the assuming insurer’s share under the specific reinsurance agreement regarding any losses and allocated loss expenses paid by the ceding insurer, but not recovered from the assuming insurer, or for unearned premiums due to the ceding insurer if not otherwise paid by the assuming insurer;

b. To make payment to the assuming insurer of any amounts held in the trust account that exceed 102 percent of the actual amount required to fund the assuming insurer’s obligations under the specific reinsurance agreement; or

c. Where the ceding insurer has received notification of termination of the trust account and where the assuming insurer’s entire obligations under the specific reinsurance agreement remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the obligations and deposit those amounts in a separate account, in the name of the ceding insurer in any qualified U. S. financial institution as defined in paragraph 51 apart from its general assets, in trust for such uses and purposes specified in paragraphs 27 a. and b. above as may remain executory after such withdrawal and for any period after the termination date.

28. Notwithstanding other provisions of this appendix, when a trust agreement is established to meet the requirements of paragraph 16 in conjunction with a reinsurance agreement covering life, annuities or accident and health risks, where it is customary to provide a trust agreement for a specific purpose, the trust agreement may provide that the ceding insurer shall undertake to use and apply amounts drawn upon the trust account, without diminution because of the insolvency of the ceding insurer or the assuming insurer, only for the following purposes:

a. To pay or reimburse the ceding insurer for:

i. The assuming insurer’s share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurer, to the owners of policies reinsured under the reinsurance agreement on account of cancellations of the policies; and

ii. The assuming insurer’s share under the specific reinsurance agreement of surrenders and benefits or losses paid by the ceding insurer, but not yet recovered from the assuming insurer, under the terms and provisions of the policies reinsured under the reinsurance agreement;

b. To pay to the assuming insurer amounts held in the trust account in excess of the amount necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer; or

c. Where the ceding insurer has received notification of termination of the trust account and where the assuming insurer’s entire obligations under the specific reinsurance agreement
remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the assuming insurer's share of liabilities, to the extent that the liabilities have not yet been funded by the assuming insurer, and deposit those amounts in a separate account, in the name of the ceding insurer in any qualified U. S. financial institution apart from its general assets, in trust for the uses and purposes specified in paragraphs 28 a. and b. as may remain executory after withdrawal and for any period after the termination date.

29. The reinsurance agreement may, but need not, contain the provisions required in paragraph 36 b., so long as these required conditions are included in the trust agreement.

30. Notwithstanding any other provisions in the trust instrument, if the grantor of the trust has been declared insolvent or placed into receivership, rehabilitation, liquidation or similar proceedings under the laws of its state or country of domicile, the trustee shall comply with an order of the commissioner with regulatory oversight over the trust or court of competent jurisdiction directing the trustee to transfer to the commissioner with regulatory oversight or other designated receiver all of the assets of the trust fund. The assets shall be applied in accordance with the priority statutes and laws of the state in which the trust is domiciled applicable to the assets of insurance companies in liquidation. If the commissioner with regulatory oversight determines that the assets of the trust fund or any part thereof are not necessary to satisfy claims of the U. S. beneficiaries of the trust, the assets or any part of them shall be returned to the trustee for distribution in accordance with the trust agreement.

31. The trust agreement may provide that the trustee may resign upon delivery of a written notice of resignation, effective not less than ninety (90) days after the beneficiary and grantor receive the notice and that the trustee may be removed by the grantor by delivery to the trustee and the beneficiary of a written notice of removal, effective not less than ninety (90) days after the trustee and the beneficiary receive the notice, provided that no such resignation or removal shall be effective until a successor trustee has been duly appointed and approved by the beneficiary and the grantor and all assets in the trust have been duly transferred to the new trustee.

32. The grantor may have the full and unqualified right to vote any shares of stock in the trust account and to receive from time to time payments of any dividends or interest upon any shares of stock or obligations included in the trust account. Any interest or dividends shall be either forwarded promptly upon receipt to the grantor or deposited in a separate account established in the grantor's name.

33. The trustee may be given authority to invest, and accept substitutions of, any funds in the account, provided that no investment or substitution shall be made without prior approval of the beneficiary, unless the trust agreement specifies categories of investments acceptable to the beneficiary and authorizes the trustee to invest funds and to accept substitutions that the trustee determines are at least equal in market value to the assets withdrawn and that are consistent with the restrictions in paragraph 36 b.

34. The trust agreement may provide that the beneficiary may at any time designate a party to which all or part of the trust assets are to be transferred. Transfer may be conditioned upon the trustee receiving, prior to or simultaneously, other specified assets.

35. The trust agreement may provide that, upon termination of the trust account, all assets not previously withdrawn by the beneficiary shall, with written approval by the beneficiary, be delivered over to the grantor.
36. A reinsurance agreement may contain provisions that:

a. Require the assuming insurer to enter into a trust agreement and to establish a trust account for the benefit of the ceding insurer, and specifying what the agreement is to cover;

b. Stipulate that assets deposited in the trust account shall be valued according to their current fair market value and shall consist only of cash in United States dollars, certificates of deposit issued by a United States bank and payable in United States dollars, and investments permitted by the Insurance Code or any combination of the above, provided investments in or issued by an entity controlling, controlled by or under common control with either the grantor or the beneficiary of the trust shall not exceed five percent (5%) of total investments. The reinsurance agreement may further specify the types of investments to be deposited. Where a trust agreement is entered into in conjunction with a reinsurance agreement covering risks other than life, annuities and accident and health, then the trust agreement may contain the provisions required by this paragraph in lieu of including such provisions in the reinsurance agreement;

c. Require the assuming insurer, prior to depositing assets with the trustee, to execute assignments or endorsements in blank, or to transfer legal title to the trustee of all shares, obligations or any other assets requiring assignments, in order that the ceding insurer, or the trustee upon the direction of the ceding insurer, may whenever necessary negotiate these assets without consent or signature from the assuming insurer or any other entity;

d. Require that all settlements of account between the ceding insurer and the assuming insurer be made in cash or its equivalent; and

e. Stipulate that the assuming insurer and the ceding insurer agree that the assets in the trust account, established pursuant to the provisions of the reinsurance agreement, may be withdrawn by the ceding insurer at any time, notwithstanding any other provisions in the reinsurance agreement, and shall be utilized and applied by the ceding insurer or its successors in interest by operation of law, including without limitation any liquidator, rehabilitator, receiver or conservator of such company, without diminution because of insolvency on the part of the ceding insurer or the assuming insurer, only for the following purposes:

   i. To pay or reimburse the ceding insurer for:

      (a) The assuming insurer's share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurer, to the owners of policies reinsured under the reinsurance agreement because of cancellations of such policies;

      (b) The assuming insurer's share of surrenders and benefits or losses paid by the ceding insurer pursuant to the provisions of the policies reinsured under the reinsurance agreement; and

      (c) Any other amounts necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer;

   ii. To make payment to the assuming insurer of amounts held in the trust account in excess of the amount necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer.

37. The reinsurance agreement also may contain provisions that:
a. Give the assuming insurer the right to seek approval from the ceding insurer, which shall not be unreasonably or arbitrarily withheld, to withdraw from the trust account all or any part of the trust assets and transfer those assets to the assuming insurer, provided:

i. The assuming insurer shall, at the time of withdrawal, replace the withdrawn assets with other qualified assets having a market value equal to the market value of the assets withdrawn so as to maintain at all times the deposit in the required amount; or

ii. After withdrawal and transfer, the market value of the trust account is no less than 102 percent of the required amount.

b. Provide for the return of any amount withdrawn in excess of the actual amounts required for paragraph 36 e., and for interest payments at a rate not in excess of the prime rate of interest on the amounts held pursuant to paragraph 36 e.;

c. Allow the award by any arbitration panel or court of competent jurisdiction of:

i. Interest at a rate different from that provided in paragraph 37 b.;

ii. Court or arbitration costs;

iii. Attorney’s fees; and

iv. Any other reasonable expenses.

38. **Financial Reporting** - A trust agreement may be used to reduce any liability for reinsurance ceded to an unauthorized assuming insurer in statutory financial statements when established on or before the date of filing of the statutory financial statement of the ceding insurer. Further, the reduction for the existence of an acceptable trust account may be up to the current fair market value of acceptable assets available to be withdrawn from the trust account at that time, but such reduction shall be no greater than the specific obligations under the reinsurance agreement that the trust account was established to secure.

39. The failure of any trust agreement to specifically identify the beneficiary as defined in paragraph 4 shall not be construed to affect any actions or rights that the commissioner may take or possess pursuant to the provisions of the laws of the domiciliary state.

**Letters of Credit Qualified under Paragraph 16**

40. The letter of credit must be clean, irrevocable, unconditional and issued or confirmed by a qualified United States financial institution as defined in paragraph 50. The letter of credit shall contain an issue date and expiration date and shall stipulate that the beneficiary need only draw a sight draft under the letter of credit and present it to obtain funds and that no other document need be presented. The letter of credit also shall indicate that it is not subject to any condition or qualifications outside of the letter of credit. In addition, the letter of credit itself shall not contain reference to any other agreements, documents or entities, except as provided in paragraph 48. a. If a court of law appoints a successor in interest to the named beneficiary, then the named beneficiary includes and is limited to the court appointed domiciliary receiver (including conservator, rehabilitator or liquidator).

41. The heading of the letter of credit may include a boxed section containing the name of the applicant and other appropriate notations to provide a reference for the letter of credit. The boxed section shall be clearly marked to indicate that such information is for internal identification purposes only.

42. The letter of credit shall contain a statement to the effect that the obligation of the qualified United States financial institution under the letter of credit is in no way contingent upon reimbursement with respect thereto.
43. The term of the letter of credit shall be for at least one year and shall contain an "evergreen clause" that prevents the expiration of the letter of credit without due notice from the issuer. The "evergreen clause" shall provide for a period of no less than thirty (30) days notice prior to expiration date or nonrenewal.

44. The letter of credit shall state whether it is subject to and governed by the laws of the ceding insurers state or the Uniform Customs and Practice for Documentary Credits of the International Chamber of Commerce (Publication 500), or any successor publication, and all drafts drawn thereunder shall be presentable at an office in the United States of a qualified United States financial institution.

45. If the letter of credit is made subject to the Uniform Customs and Practice for Documentary Credits of the International Chamber of Commerce (Publication 500), or any successor publication, then the letter of credit shall specifically address and provide for an extension of time to draw against the letter of credit in the event that one or more of the occurrences specified in Article 17 of Publication 500 or any other successor publication, occur.

46. The letter of credit shall be issued or confirmed by a qualified United States financial institution authorized to issue letters of credit, pursuant to paragraph 50.

47. If the letter of credit is issued by a qualified United States financial institution authorized to issue letters of credit, other than a qualified United States financial institution as described in paragraph 46, then the following additional requirements shall be met:

   a. The issuing qualified United States financial institution shall formally designate the confirming qualified United States financial institution as its agent for the receipt and payment of the drafts; and
   b. The "evergreen clause" shall provide for thirty (30) days notice prior to expiration date for nonrenewal.

48. Reinsurance agreement provisions:

   a. The reinsurance agreement in conjunction with which the letter of credit is obtained may contain provisions that:
      i. Require the assuming insurer to provide letters of credit to the ceding insurer and specify what they are to cover;
      ii. Stipulate that the assuming insurer and ceding insurer agree that the letter of credit provided by the assuming insurer pursuant to the provisions of the reinsurance agreement may be drawn upon at any time, notwithstanding any other provisions in the agreement, and shall be utilized by the ceding insurer or its successors in interest only for one or more of the following reasons:
         (a) To pay or reimburse the ceding insurer for:
             (1) The assuming insurer's share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurers, to the owners of policies reinsured under the reinsurance agreement on account of cancellations of such policies;
             (2) The assuming insurer's share, under the specific reinsurance agreement, of surrenders and benefits or losses paid by the
ceding insurer, but not yet recovered from the assuming insurers, under the terms and provisions of the policies reinsured under the reinsurance agreement; and

(3) Any other amounts necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer;

(b) Where the letter of credit will expire without renewal or be reduced or replaced by a letter of credit for a reduced amount and where the assuming insurer’s entire obligations under the specific reinsurance remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the assuming insurer’s share of the liabilities, to the extent that the liabilities have not yet been funded by the assuming insurer and exceed the amount of any reduced or replacement letter of credit, and deposit those amounts in a separate account in the name of the ceding insurer in a qualified U. S. financial institution apart from its general assets, in trust for such uses and purposes specified in paragraph 48. a. ii. (a) as may remain after withdrawal and for any period after the termination date.

iii. All of the provisions of paragraph 48. a. shall be applied without diminution because of insolvency on the part of the ceding insurer or assuming insurer.

b. Nothing contained in paragraph 48. a. shall preclude the ceding insurer and assuming insurer from providing for:

i. An interest payment, at a rate not in excess of the prime rate of interest, on the amounts held pursuant to paragraph 48. a. ii.; or

ii. The return of any amounts drawn down on the letters of credit in excess of the actual amounts required for the above or any amounts that are subsequently determined not to be due.

Other Security

49. A ceding insurer may take credit for unencumbered funds withheld by the ceding insurer in the United States subject to withdrawal solely by the ceding insurer and under its exclusive control.

Qualified U.S. Financial Institutions

50. For purposes of paragraphs 15, 16 c., 40 and 46 a “qualified U.S. financial institution” means an institution that:

a. Is organized or (in the case of a U.S. office of a foreign banking organization) licensed, under the laws of the United States or any state thereof;

b. Is regulated, supervised and examined by U.S. federal or state authorities having regulatory authority over banks and trust companies; and

c. Has been determined by either the commissioner or the Securities Valuation Office of the National Association of Insurance Commissioners to meet such standards of financial condition and standing as are considered necessary and appropriate to regulate the quality of financial institutions whose letters of credit will be acceptable to the commissioner.

51. A “qualified U.S. financial institution” means, for purposes of those provisions of this appendix specifying those institutions that are eligible to act as a fiduciary of a trust, an institution that:
a. Is organized, or in the case of a U.S. branch or agency office of a foreign banking organization, licensed, under the laws of the United States or any state thereof and has been granted authority to operate with fiduciary powers; and

b. Is regulated, supervised and examined by federal or state authorities having regulatory authority over banks and trust companies.
Appendix A-791

Life and Health Reinsurance Agreements

Accounting Requirements

1. This Appendix shall not apply to assumption reinsurance, yearly renewable term reinsurance or certain nonproportional reinsurance such as stop loss or catastrophe reinsurance.

2. No insurer shall, for reinsurance ceded, reduce any liability or establish any asset in any statutory financial statement if, by the terms of the reinsurance agreement, in substance or effect, any of the following conditions exist:

   a. Renewal expense allowances provided or to be provided to the ceding insurer by the reinsurer in any accounting period, are not sufficient to cover anticipated allocable renewal expenses of the ceding insurer on the portion of the business reinsured, unless a liability is established for the present value of the shortfall (using assumptions equal to the applicable statutory reserve basis on the business reinsured). Those expenses include commissions, premium taxes and direct expenses including, but not limited to, billing, valuation, claims and maintenance expected by the company at the time the business is reinsured;

   b. The ceding insurer can be deprived of surplus or assets at the reinsurer’s option or automatically upon the occurrence of some event, such as the insolvency of the ceding insurer, except that termination of the reinsurance agreement by the reinsurer for nonpayment of reinsurance premiums or other amounts due, such as modified coinsurance reserve adjustments, interest and adjustments on funds withheld, and tax reimbursements, shall not be considered to be such a deprivation of surplus or assets;

   c. The ceding insurer is required to reimburse the reinsurer for negative experience under the reinsurance agreement, except that neither offsetting experience refunds against current and prior years’ losses under the agreement nor payment by the ceding insurer of an amount equal to the current and prior years’ losses under the agreement upon voluntary termination of in force reinsurance by the ceding insurer shall be considered such a reimbursement to the reinsurer for negative experience. Voluntary termination does not include situations where termination occurs because of unreasonable provisions which allow the reinsurer to reduce its risk under the agreement. An example of such a provision is the right of the reinsurer to increase reinsurance premiums or risk and expense charges to excessive levels forcing the ceding company to prematurely terminate the reinsurance treaty;

   d. The ceding insurer must, at specific points in time scheduled in the agreement, terminate or automatically recapture all or part of the reinsurance ceded;

   e. The reinsurance agreement involves the possible payment by the ceding insurer to the reinsurer of amounts other than from income realized from the reinsured policies. For example, it is improper for a ceding company to pay reinsurance premiums, or other fees or charges to a reinsurer which are greater than the direct premiums collected by the ceding company;

A791-1
The treaty does not transfer all of the significant risk inherent in the business being reinsured. The following table identifies for a representative sampling of products or type of business, the risks which are considered to be significant. For products not specifically included, the risks determined to be significant shall be consistent with this table.

Risk categories:

i. Morbidity

ii. Mortality

iii. Lapse

This is the risk that a policy will voluntarily terminate prior to the recoupment of a statutory surplus strain experienced at issue of the policy.

iv. Credit Quality

This is the risk that invested assets supporting the reinsured business will decrease in value. The main hazards are that assets will default or that there will be a decrease in earning power. It excludes market value declines due to changes in interest rate.

v. Reinvestment

This is the risk that interest rates will fall and funds reinvested (coupon payments or monies received upon asset maturity or call) will therefore earn less than expected. If asset durations are less than liability durations, the mismatch will increase.

vi. Disintermediation

This is the risk that interest rates rise and policy loans and surrenders increase or maturing contracts do not renew at anticipated rates of renewal. If asset durations are greater than the liability durations, the mismatch will increase. Policyholders will move their funds into new products offering higher rates. The company may have to sell assets at a loss to provide for these withdrawals.
Life and Health Reinsurance Agreements

*LTC = Long Term Care Insurance
LTD = Long Term Disability Insurance
The credit quality, reinvestment, or disintermediation risk is significant for the business reinsured and the ceding company does not (other than for the classes of business excepted in paragraph g. ii.) either transfer the underlying assets to the reinsurer or legally segregate such assets in a trust or escrow account or otherwise establish a satisfactory mechanism which legally segregates, by contract or contract provision, the underlying assets.

ii. Notwithstanding the requirements of paragraph g. i., the assets supporting the reserves for the following classes of business and any classes of business which do not have a significant credit quality, reinvestment or disintermediation risk may be held by the ceding company without segregation of such assets:

(a) Health Insurance - LTC/LTD
(b) Traditional Non-Par Permanent
(c) Traditional Par Permanent
(d) Adjustable Premium Permanent
(e) Indeterminate Premium Permanent
(f) Universal Life Fixed Premium (no dump-in premiums allowed)

The associated formula for determining the reserve interest rate adjustment must use a formula which reflects the ceding company’s investment earnings and incorporates all realized and unrealized gains and losses reflected in the statutory statement. The following is an acceptable formula:

\[
\text{Rate} = \frac{2(I + CG)}{X + Y - I - CG}
\]

Where:
- \(I\) is the net investment income
- \(CG\) is capital gains less capital losses
- \(X\) is the current year cash and invested assets plus investment income due and accrued less borrowed money
- \(Y\) is the same as \(X\) but for the prior year

h. Settlements are made less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date.

i. The ceding insurer is required to make representations or warranties not reasonably related to the business being reinsured.

j. The ceding insurer is required to make representations or warranties about future performance of the business being reinsured.

k. The reinsurance agreement is entered into for the principal purpose of producing significant surplus aid for the ceding insurer, typically on a temporary basis, while not transferring all of the significant risks inherent in the business reinsured and, in substance or effect, the expected potential liability to the ceding insurer remains basically unchanged.
3. Any increase in surplus net of federal income tax resulting from reinsurance agreements entered into or amended after the effective date of the Codification which involve the reinsurance of business issued prior to the effective date of the agreements shall be identified separately on the insurer's statutory financial statement as a surplus item and recognition of the surplus increase as income shall be reflected on a net of tax basis as earnings emerge from the business reinsured.

(For example, on the last day of calendar year N, company XYZ pays a $20 million initial commission and expense allowance to company ABC for reinsuring an existing block of business. Assuming a 34% tax rate, the net increase in surplus at inception is $13.2 million ($20 million - $6.8 million) which is reported on the "Aggregate write-ins for gains and losses in surplus" line in the Capital and Surplus account. $6.8 million (34% of $20 million) is reported as income on the "Commissions and expense allowances on reinsurance ceded" line of the Summary of Operations.

At the end of year N+1 the business has earned $4 million. ABC has paid $.5 million in profit and risk charges in arrears for the year and has received a $1 million experience refund. Company ABC's annual statement would report $1.65 million (66% of ($4 million - $1 million - $.5 million) up to a maximum of $13.2 million) on the "Commissions and expense allowance on reinsurance ceded" line of the Summary of Operations, and -$1.65 million on the "Aggregate write-ins for gains and losses in surplus" line of the Capital and Surplus account. The experience refund would be reported separately as a miscellaneous income item in the Summary of Operations.)

Written Agreements

4. No reinsurance agreement or amendment to any agreement may be used to reduce any liability or to establish any asset in any financial statement, unless the agreement, amendment or a binding letter of intent has been duly executed by both parties no later than the "as of date" of the financial statement.

5. In the case of a letter of intent, a reinsurance agreement or an amendment to a reinsurance agreement must be executed within a reasonable period of time, not exceeding ninety (90) days from the execution date of the letter of intent, in order for credit to be granted for the reinsurance ceded.
Appendix A-812

Smoker/Nonsmoker Mortality Tables for Use in Determining Minimum Reserve Liabilities and Nonforfeiture Benefits

Purpose

1. The purpose of this Appendix is to permit the use of mortality tables that reflect differences in mortality between smokers and nonsmokers in determining minimum reserve liabilities for plans of insurance with separate premium rates for smokers and nonsmokers.

Definitions

2. As used in this Appendix, “1980 CSO Table, with or without Ten-Year Select Mortality Factor” means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the Society of Actuaries Committee to Recommend New Mortality Tables for Valuation of Standard Individual Ordinary Life Insurance, referred to as the Commissioners 1980 Standard Ordinary Mortality Table. The same select factors will be used for both smokers and nonsmokers tables.

3. As used in this Appendix, “1980 CET Table” means that mortality table consisting of separate rates of mortality for male and female lives, developed by the Society of Actuaries Committee to Recommend New Mortality Tables for Valuation of Standard Individual Ordinary Life Insurance, and referred to as the Commissioners 1980 Extended Term Insurance Table.

4. As used in this Appendix, the phrase “smoker and nonsmoker mortality tables” refers to the mortality tables with separate rates of mortality for smokers and nonsmokers derived from the tables defined in paragraphs 2 through 3 which were developed by the Society of Actuaries Task Force on Smoker/Nonsmoker Mortality and the California Insurance Department staff and recommended by the NAIC Technical Staff Actuarial Group.

5. As used in this Appendix, the phrase “composite mortality tables” refers to the mortality tables defined in paragraphs 2 through 3 as they were originally published with rates of mortality that do not distinguish between smokers and nonsmokers.

Alternate Tables

6. For any policy of insurance delivered or issued for delivery after the effective date of Codification, at the option of the company and subject to the conditions stated in paragraph 7 of this Appendix:

   a. the 1980 CSO Smoker and Nonsmoker Mortality Tables, with or without Ten-Year Select Mortality Factors, may be substituted for the 1980 CSO Table, with or without Ten-Year Select Mortality Factors, and

   b. the 1980 CET Smoker and Nonsmoker Mortality Tables may be substituted for the 1980 CET Table for use in determining minimum reserve liabilities.
Conditions
7. For each plan of insurance with separate rates for smokers and nonsmokers an insurer may
   a. use composite mortality tables to determine minimum reserve liabilities,
   b. use smoker and nonsmoker mortality tables to determine the valuation net premiums and additional minimum reserves, if any, required by Appendix A-820 and use composite mortality tables to determine the basic minimum reserves, or
   c. use smoker and nonsmoker mortality to determine minimum reserve liabilities.
Appendix A-820

Minimum Life And Annuity Reserve Standards

Definitions

1. A “qualified actuary” is an individual who:

   a. is a member in good standing of the American Academy of Actuaries; and

   b. is qualified to sign statements of actuarial opinion for life and health insurance company annual statements in accordance with the American Academy of Actuaries qualification standards for actuaries signing such statements; and

   c. is familiar with the valuation requirements applicable to life and health insurance companies; and

   d. Has not been found by the Commissioner (or if so found has subsequently been reinstated as a qualified actuary), following appropriate notice and hearing to have:

      i. Violated any provision of, or any obligation imposed by, the Insurance Law or other law in the course of his or her dealings as a qualified actuary; or

      ii. Been found guilty of fraudulent or dishonest practices; or

      iii. Demonstrated his or her incompetence, lack of cooperation, or untrustworthiness to act as a qualified actuary; or

      iv. Submitted to the Commissioner during the past five (5) years, pursuant to this regulation, an actuarial opinion or memorandum that the Commissioner rejected because it did not meet the provisions of this regulation including standards set by the Actuarial Standards Board; or

      v. Resigned or been removed as an actuary within the past five (5) years as a result of acts or omissions indicated in any adverse report on examination or as a result of failure to adhere to generally acceptable actuarial standards; and

   e. Has not failed to notify the Commissioner of any action taken by any Commissioner of any other state similar to that under subparagraph d. above.

Valuation Requirements

2. Reserves reported in the financial statements shall:

   a. be computed in accordance with presently accepted actuarial standards,

   b. be based on actuarial assumptions which produce reserves at least as great as those called for in any contract provision as to reserve basis and method, and are in accordance with all other contract provisions,
be computed on the basis of assumptions consistent with those used in computing the corresponding items in the annual statement of the preceding year-end with any exceptions disclosed in the notes to the financial statements, and

d. include provision for all actuarial reserves and related statement items which ought to be established.

Computation of Minimum Standard for Life Insurance and Endowment Benefits

3. The minimum standard for the valuation of all life insurance and endowment policies and contracts shall be the commissioners reserve valuation methods defined in paragraphs 9 through 11, valuation interest rates provided in paragraphs 5 through 8, and the following tables:

a. For all ordinary policies of life insurance issued on the standard basis, excluding any disability and accidental death benefits in the policies:

i. The Commissioners 1980 Standard Ordinary Mortality Table;

ii. At the election of the company for any one or more specified plans of life insurance, the Commissioners 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors; or

iii. Any ordinary mortality table, adopted after 1980 by the National Association of Insurance Commissioners, for use in determining the minimum standard of valuation for such policies;

b. For all industrial life insurance policies issued on the standard basis, excluding any disability and accidental death benefits in the policies, the Commissioners 1961 Standard Industrial Mortality Table or any industrial mortality table adopted after 1980 by the National Association of Insurance Commissioners for use in determining the minimum standard of valuation for the policies;

c. For total and permanent disability benefits in or supplementary to ordinary policies or contracts, the tables of Period 2 disablement rates and the 1930 to 1950 termination rates of the 1952 Disability Study of the Society of Actuaries, with due regard to the type of benefit or any tables of disablement rates and termination rates adopted after 1980 by the National Association of Insurance Commissioners, for use in determining the minimum standard of valuation for those policies. Any such table shall, for active lives, be combined with a mortality table permitted for calculating the reserves for life insurance policies;

d. For accidental death benefits in or supplementary to policies, the 1959 Accidental Death Benefits Table or any accidental death benefits table adopted after 1980 by the National Association of Insurance Commissioners for use in determining the minimum standard of valuation for those policies. The table shall be combined with a mortality table for calculating the reserves for life insurance policies; and

e. For group life insurance, life insurance issued on the substandard basis and other special benefits: tables which provide for an adequate reserve.

Computation of Minimum Standard for Annuities

4. The minimum standard for the valuation of all individual annuity and pure endowment contracts and for all annuities and pure endowments purchased under group annuity and pure endowment
contracts, shall be the commissioners annuity reserve valuation methods defined in paragraphs 12 and 13, valuation interest rates provided in paragraphs 5 through 8, and the tables defined in Appendix A-821.

**Computation of Minimum Standard Valuation Interest Rates by Calendar Year of Issue - All Business**

5. The interest rates used in determining the minimum standard for the valuation of policies issued on or after the effective date of the Codification shall be the calendar year statutory valuation interest rates as defined below:

a. **Calendar Year Statutory Valuation Interest Rates**
   
i. The calendar year statutory valuation interest rates, I, shall be determined as follows and the results rounded to the nearer one-quarter of one percent:

   (a) For life insurance:
   
   \[
   I = 0.03 + W(R_1 - 0.03) + \frac{W}{2} (R_2 - 0.09); 
   \]

   (b) For single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and from guaranteed interest contracts with cash settlement options:

   \[
   I = 0.03 + W(R - 0.03) 
   \]

   where \(R_1\) is the lesser of \(R\) and 0.09,
   
   \(R_2\) is the greater of \(R\) and 0.09,

   \(R\) is the reference interest rate defined in paragraph 7,

   and \(W\) is the weighting factor defined in paragraph 6;

   (c) For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on an issue year basis, except as stated in Subparagraph (b) above, the formula for life insurance stated in Subparagraph (a) above shall apply to annuities and guaranteed interest contracts with guarantee durations in excess of ten (10) years and the formula for single premium immediate annuities stated in Subparagraph (b) above shall apply to annuities and guaranteed interest contracts with guarantee duration of ten (10) years or less;

   (d) For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the formula for single premium immediate annuities stated in Subparagraph (b) above shall apply.

   (e) For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a change in fund basis, the formula for single premium immediate annuities stated in Subparagraph (b) above shall apply.
ii. However, if the calendar year statutory valuation interest rate for a life insurance policy issued in any calendar year determined without reference to this sentence differs from the corresponding actual rate for similar policies issued in the immediately preceding calendar year by less than one-half of one percent (1/2 of 1%), the calendar year statutory valuation interest rate for the life insurance policies shall be equal to the corresponding actual rate for the immediately preceding calendar year.

6. The weighting factors referred to in the formulas stated above are given in the following tables:

a. Weighting Factors for Life Insurance:

<table>
<thead>
<tr>
<th>Guarantee Duration (Years)</th>
<th>Weighting Factors</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 or less</td>
<td>.50</td>
</tr>
<tr>
<td>More than 10, but not more than 20</td>
<td>.45</td>
</tr>
<tr>
<td>More than 20</td>
<td>.35</td>
</tr>
</tbody>
</table>

For life insurance, the guarantee duration is the maximum number of years the life insurance can remain in force on a basis guaranteed in the policy or under options to convert to plans of life insurance with premium rates or nonforfeiture values or both which are guaranteed in the original policy;

b. Weighting factor for single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and guaranteed interest contracts with cash settlement options:

.80

c. Weighting factors for other annuities and for guaranteed interest contracts, except as stated in Subparagraph (b) above, shall be as specified in Items i., ii. and iii. below, according to the rules and definitions in Items iv., v. and vi. below:

i. For annuities and guaranteed interest contracts valued on an issue year basis:

<table>
<thead>
<tr>
<th>Guarantee Duration (Years)</th>
<th>Weighting Factor for Plan Type</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A</td>
</tr>
<tr>
<td>5 or less</td>
<td>.80</td>
</tr>
<tr>
<td>More than 5, but not more than 10:</td>
<td>.75</td>
</tr>
<tr>
<td>More than 10, but not more than 20:</td>
<td>.65</td>
</tr>
<tr>
<td>More than 20:</td>
<td>.45</td>
</tr>
</tbody>
</table>
ii. For annuities and guaranteed interest contracts valued on a change in fund basis, the factors shown in Item i. above increased by:

<table>
<thead>
<tr>
<th>Plan Type</th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>.15</td>
<td>.25</td>
<td>.05</td>
</tr>
</tbody>
</table>

iii. For annuities and guaranteed interest contracts valued on an issue year basis (other than those with no cash settlement options) that do not guarantee interest on considerations received more than one year after issue or purchase and for annuities and guaranteed interest contracts valued on a change in fund basis that do not guarantee interest rates on considerations received more than twelve (12) months beyond the valuation date, the factors shown in Item i. or derived in Item ii. increased by:

<table>
<thead>
<tr>
<th>Plan Type</th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>.05</td>
<td>.05</td>
<td>.05</td>
</tr>
</tbody>
</table>

iv. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, the guarantee duration is the number of years for which the contract guarantees interest rates in excess of the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty (20) years. For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the guaranteed duration is the number of years from the date of issue or date of purchase to the date annuity benefits are scheduled to commence.

v. Plan type as used in the above tables is defined as follows:

(a) Plan Type A: At any time policyholder may withdraw funds only (1) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without an adjustment but installments over five years or more, or (3) as an immediate life annuity, or (4) no withdrawal permitted.

(b) Plan Type B: Before expiration of the interest rate guarantee, policyholder may withdraw funds only (1) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without an adjustment but in installments over five years or more, or (3) no withdrawal permitted. At the end of interest rate guarantee, funds may be withdrawn without an adjustment in a single sum or installments over less than five years.
(c) Plan Type C: Policyholder may withdraw funds before expiration of interest rate guarantee in a single sum or installments over less than five years either (1) without adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) subject only to a fixed surrender charge stipulated in the contract as a percentage of the fund.

vi. A company may elect to value guaranteed interest contracts with cash settlement options and annuities with cash settlement options on either an issue year basis or on a change in fund basis. Guaranteed interest contracts with no cash settlement options and other annuities with no cash settlement options must be valued on an issue year basis. An issue year basis of valuation refers to a valuation basis under which the interest rate used to determine the minimum valuation standard for the entire duration of the annuity or guaranteed interest contract is the calendar year valuation interest rate for the year of issue or year of purchase of the annuity or guaranteed interest contract, and the change in fund basis of valuation refers to a valuation basis under which the interest rate used to determine the minimum valuation standard applicable to each change in the fund held under the annuity or guaranteed interest contract is the calendar year valuation interest rate for the year of the change in the fund.

7. The reference interest rate referred to in paragraph 5 of this Appendix shall be defined as follows:

a. For all life insurance, the lesser of the average over a period of thirty-six (36) months and the average over a period of twelve (12) months, ending on June 30 of the calendar year preceding the year of issue, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

b. For single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or year of purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

c. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a year of issue basis, except as stated in Subparagraph (b) above, with guarantee duration in excess of ten (10) years, the lesser of the average over a period of thirty-six (36) months and the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

d. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a year of issue basis, except as stated in Subparagraph (b) above, with guarantee duration of ten (10) years or less, the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

e. For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the average over a period of twelve (12) months, ending
on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

f. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a change in fund basis, except as stated in Subparagraph b. above, the average over a period of twelve (12) months, ending on June 30 of the calendar year of the change in the fund, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.

8. In the event that the monthly average of the composite yield on seasoned corporate bonds is no longer published by Moody’s Investors Service, Inc. or in the event that the National Association of Insurance Commissioners determines that the monthly average of the composite yield on seasoned corporate bonds as published by Moody’s Investors Service, Inc. is no longer appropriate for the determination of the reference interest rate, then an alternative method for determination of the reference interest rate adopted by the National Association of Insurance Commissioners may be substituted.

Reserve Valuation Method—Life Insurance and Endowment Benefits

9. Except as otherwise provided in this Appendix, reserves according to the commissioners reserve valuation method, for the life insurance and endowment benefits of policies providing for a uniform amount of insurance and requiring the payment of uniform premiums shall be the excess, if any, of the present value, at the date of valuation, of the future guaranteed benefits provided for by those policies, over the then present value of any future modified net premiums therefor. The modified net premiums for a policy shall be the uniform percentage of the respective contract the premiums for the benefits that the present value, at the date of issue of the policy, of all modified net premiums shall be equal to the sum of the then present value of the benefits provided for by the policy and the excess of a. over b., as follows:

a. A net level annual premium equal to the present value, at the date of issue, of the benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per annum payable on the first and each subsequent anniversary of the policy on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan for insurance of the same amount at an age one year higher than the age at issue of the policy.

b. A net one-year term premium for the benefits provided for in the first policy year.

10. For a life insurance policy for which the contract premium in the first policy year exceeds that of the second year and for which no comparable additional benefit is provided in the first year for the excess and which provides an endowment benefit or a cash surrender value or a combination in an amount greater than the excess premium, the reserve according to the commissioners reserve valuation method as of any policy anniversary occurring on or before the assumed ending date defined herein as the first policy anniversary on which the sum of any endowment benefit and any cash surrender value then available is greater than the excess premium shall, except as otherwise provided in paragraphs 17 and 18, be the greater of the reserve as of the policy anniversary calculated as described in the preceding paragraph and the reserve as of the policy anniversary calculated as described in those paragraphs, but with (i) the value defined in that paragraph being reduced by fifteen percent (15%) of the amount of such excess first year premium, (ii) all present values of benefits and premiums being determined without reference to premiums or benefits provided for by the policy after the assumed ending date, (iii) the policy being assumed to mature on that date as an endowment, and (iv) the cash surrender value provided.
on that date being considered as an endowment benefit. In making the above comparison the mortality stated in paragraph 3 and interest bases stated in paragraphs 5 through 8 shall be used.

11. Reserves according to the commissioners reserve valuation method shall be calculated by a method consistent with the principles of paragraphs 9 and 10 for:

a. Life insurance policies providing for a varying amount of insurance or requiring the payment of varying premiums;

b. Group annuity and pure endowment contracts purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended;

c. Disability and accidental death benefits in all policies and contracts; and

d. All other benefits, except life insurance and endowment benefits in life insurance policies and benefits provided by all other annuity and pure endowment contracts.

Reserve Valuation Method—Annuity and Pure Endowment Benefits

12. Paragraph 13 shall apply to all annuity and pure endowment contracts other than group annuity and pure endowment contracts purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended.

13. Reserves according to the commissioners annuity reserve method for benefits under annuity or pure endowment contracts, excluding any disability and accidental death benefits in the contracts, shall be the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, provided for by the contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of the contract, that become payable prior to the end of the respective contract year. The future guaranteed benefits shall be determined by using the mortality table, if any, and the interest rate, or rates, specified in the contracts for determining guaranteed benefits. The valuation considerations are the portions of the respective gross considerations applied under the terms of the contracts to determine nonforfeiture values.

Minimum Reserves

14. In no event shall a company's aggregate reserves for all life insurance policies, excluding disability and accidental death benefits be less than the aggregate reserves calculated in accordance with the methods set forth in paragraphs 9-11, 12-13, 17-18 and 19 and the mortality table or tables and rate or rates of interest used in calculating nonforfeiture benefits for the policies.

Optional Reserve Calculation

15. Reserves for any category of policies, contracts or benefits, may be calculated, at the option of the company, according to any standards that produce greater aggregate reserves for the category than those calculated according to the minimum standard provided here, but the rate or rates of interest used for policies and contracts, other than annuity and pure endowment contracts, shall not be higher than the corresponding rate or rates of interest used in calculating any nonforfeiture benefits provided there.
16. A company that shall have adopted at any time a standard of valuation producing greater aggregate reserves than those calculated according to the minimum standard provided here may, adopt a lower standard of valuation, but not lower than the minimum provided here; provided that the holding of additional reserves previously determined by a qualified actuary shall not be deemed to be the adoption of a higher standard of valuation.

Reserve Calculation—Valuation Net Premium Exceeding the Gross Premium Charged

17. If in any contract year the gross premium charged by a life insurance company on a policy or contract is less than the valuation net premium for the policy or contract calculated by the method used in calculating the reserve but using the minimum valuation standards of mortality and rate of interest, the minimum reserve required for the policy or contract shall be the greater of either the reserve calculated according to the mortality table, rate of interest, and method actually used for the policy or contract, or the reserve calculated by the method actually used for the policy or contract but using the minimum valuation standards of mortality and rate of interest and replacing the valuation net premium by the actual gross premium in each contract year for which the valuation net premium exceeds the actual gross premium. The minimum valuation standards of mortality and rate of interest to be used are those standards stated in paragraph 3 and paragraphs 5 through 8 of this Appendix.

18. For a life insurance policy for which the gross premium in the first policy year exceeds that of the second year and for which no comparable additional benefit is provided in the first year for the excess and which provides an endowment benefit or a cash surrender value or a combination in an amount greater than the excess premium, the provisions of paragraphs 17 and 18 shall be applied as if the method actually used in calculating the reserve for the policy were the method described in paragraph 9. The minimum reserve at each policy anniversary of such a policy shall be the greater of the minimum reserve calculated in accordance with paragraphs 9 and 10 and the minimum reserve calculated in accordance with paragraphs 17 and 18.

Reserve Calculation—Indeterminate Premium Plans

19. In the case of a plan of life insurance that provides for future premium determination, the amounts of which are to be determined by the insurance company based on then estimates of future experience, or in the case of a plan of life insurance or annuity that is of such a nature that the minimum reserves cannot be determined by the methods described above, the reserves that are held under the plan shall:

a. Be appropriate in relation to the benefits and the pattern of premiums for that plan; and

b. Be computed by a method that is consistent with the principles of this Appendix and which produce a good and sufficient reserve.
Appendix A-821

Annuity Mortality Table for Use in Determining Reserve Liabilities for Annuities

Purpose

1. The purpose of this Appendix is to recognize the following mortality tables for use in determining the minimum standard of valuation for annuity and pure endowment contracts: the 1983 Table "a," the Annuity 2000 Mortality Table, and the 1994 Group Annuity Reserving (1994 GAR) Table.

Definitions

2. As used in this Appendix “1983 Table ‘a’” means that mortality table developed by the Society of Actuaries Committee to Recommend a New Mortality Basis for Individual Annuity Valuation and adopted as a recognized mortality table for annuities in June 1982 by the National Association of Insurance Commissioners.

3. As used in this Appendix “1994 GAR Table” means that mortality table developed by the Society of Actuaries Group Annuity Valuation Table Task Force and shown in the Proceedings of the NAIC.

4. As used in this Appendix “Annuity 2000 Mortality Table” means that mortality table developed by the Society of Actuaries Committee on Life Insurance Research and shown in the Proceedings of the NAIC.

Individual Annuity or Pure Endowment Contracts

5. Except as provided in paragraph 6 of this Appendix, the Annuity 2000 Mortality Table shall be used for determining the minimum standard of valuation for any individual annuity or pure endowment contract.

6. The 1983 Table “a” without projection is to be used for determining the minimum standards of valuation for an individual annuity or pure endowment contract solely when the contract is based on life contingencies and is issued to fund periodic benefits arising from:
   a. Settlements of various forms of claims pertaining to court settlements or out of court settlements from tort actions;
   b. Settlements involving similar actions such as worker’s compensation claims; or
   c. Settlements of long term disability claims where a temporary or life annuity has been used in lieu of continuing disability payments.

Group Annuity or Pure Endowment Contracts

7. The 1994 GAR Table shall be used for determining the minimum standard of valuation for any annuity or pure endowment purchased under a group annuity or pure endowment contract.
Application of the 1994 GAR Table

8. In using the 1994 GAR Table, the mortality rate for a person age \( x \) in year \((1994 + n)\) is calculated as follows:

\[
q_{x}^{1994+n} = q_{x}^{1994} (1 - AA_{x})^{n}
\]

where the \( q_{x}^{1994} \) and \( AA_{x}s \) are as specified in the 1994 GAR Table.
Appendix A-822

Asset Adequacy Analysis Requirements

Definitions

1. “Asset Adequacy Analysis” means an analysis of the adequacy of reserves and related items, in light of the assets supporting such reserves and related items, to meet the obligations of an insurer. It may take many forms, including, but not limited to, cash flow testing, sensitivity testing or applications of risk theory.

2. “Non-Investment Grade Bonds” are those designated as classes 3, 4, 5 or 6 by the NAIC Securities Valuation Office.

Asset Adequacy Analysis

3. The reserves and related items, when considered in light of the assets held by the company with respect to such reserves and related actuarial items including, but not limited to, the investment earnings on such assets, and the considerations anticipated to be received and retained under such policies and contracts, shall make adequate provision, according to presently accepted actuarial standards of practice, for the anticipated cash flows required by the contractual obligations and related expenses of the company.

4. The company shall analyze only those assets held in support of the reserves which are the subject for specific analysis, hereafter called “specified reserves.” A particular asset or portion thereof supporting a group of specified reserves cannot support any other group of specified reserves. An asset may be allocated over several groups of specified reserves.

5. A company with admitted assets at December 31 equal to or greater than $500 million shall perform an asset adequacy analysis as of the end of each year.

6. A company with admitted assets at December 31 between $100 million and $500 million shall perform an asset adequacy analysis as of the end of each third year if the conditions in the table in paragraph 8 are met. If the conditions in the table in paragraph 8 are not met, the asset adequacy analysis shall be performed as of the end of each year.

7. A company with admitted assets at December 31 equal to or less than $100 million is exempt from performing an asset adequacy analysis if:

   a. the conditions in the table in paragraph 8 are met and,

   b. the Examiner Team for the National Association of Insurance Commissioners (NAIC) has not designated the company as a first priority company in any of the two calendar years preceding the calendar year for which financial statements are applicable, or a second priority company in each of the two calendar years preceding the calendar year for which financial statements are applicable.
8. The ratios in the following table shall be calculated based on amounts as of the end of the calendar year.

<table>
<thead>
<tr>
<th>1) Admitted assets</th>
<th>Less than or equal to $20 million</th>
<th>Between $20 million and $100 million</th>
<th>Between $100 million and $500 million</th>
</tr>
</thead>
<tbody>
<tr>
<td>2) Ratio of the sum of capital and surplus to the sum of cash and invested assets is at least equal to:</td>
<td>10%</td>
<td>7%</td>
<td>5%</td>
</tr>
<tr>
<td>3) The ratio of the sum of the reserves and liabilities for annuities and deposits to the total admitted assets is less than:</td>
<td>30%</td>
<td>40%</td>
<td>50%</td>
</tr>
<tr>
<td>4) The ratio of the book value of the non-investment grade bonds to the sum of capital and surplus is less than:</td>
<td>50%</td>
<td>50%</td>
<td>50%</td>
</tr>
</tbody>
</table>

9. If the company determines as the result of asset adequacy analysis that a reserve should be held in addition to the aggregate reserve held and calculated in accordance with methods set forth in Appendix A-820, the company shall establish such additional reserve.

10. Additional reserves established above and deemed not necessary in subsequent years may be released. The release of such reserves would not be deemed an adoption of a lower standard of valuation.

Aggregation

11. For the asset adequacy analysis referred to in this Appendix, reserves and assets may be aggregated by either of the following methods:

a. Aggregate the reserves and related actuarial items, and the supporting assets, for different products or lines of business, before analyzing the adequacy of the combined assets to mature the combined liabilities. The assets held in support of the reserves and related actuarial items so aggregated shall be managed in such a manner that the cash flows from the aggregated assets are available to help mature the liabilities from the blocks of business that have been aggregated.

b. Aggregate the results of asset adequacy analysis of one or more products or lines of business, the reserves for which prove through analysis to be redundant, with the results of one or more products or lines of business, the reserves for which prove through analysis to be deficient. The company shall demonstrate that the asset adequacy results for the various products or lines of business for which the results are so aggregated:

i. Are developed using consistent economic scenarios, or

ii. Are subject to mutually independent risks, i.e., the likelihood of events impacting the adequacy of the assets supporting the redundant reserves is completely unrelated to the likelihood of events impacting the adequacy of the assets supporting the deficient reserves.
Appendix A-825

Commissioners' Annuity Reserve Valuation Method (CARVM)

Purpose

1. The purpose of this Appendix is to clarify which surrender charge factors may be taken into account and which are to be disregarded under CARVM.

Valuation Requirements

2. Reserves according to CARVM depend in part upon the present values of "future guaranteed benefits, including guaranteed nonforfeiture benefits." It has always been recognized that this phrase, as used in Appendix A-820, includes cash surrender values based on contractual guarantees after reduction for any contractual surrender charges available to the insurer.

3. Contingent surrender charges may not be available upon cash surrender at future contract anniversaries, and it is not consistent with the conservative nature of CARVM to reduce the value of future guaranteed benefits on account of such contingent surrender charges. Accordingly, the value of future guaranteed benefits under CARVM may not be reduced by contingent surrender charges which may not be available upon cash surrender.

4. However, there may be some contracts with contingent surrender charges with bail-out rates which are so low that it would not be contrary to the conservative intent of CARVM to treat such surrender charges as available. Contingent surrender charges with bail-out rates less than or equal to the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years issued in the same year may be treated as available.

5. In addition, there are some contracts with contingent surrender charges with bail-out rates which are a function of an external index whose future values are not known. Judgment is required to determine whether or not such surrender charges may be treated as available. Comparison to the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years may be useful.

6. For contracts with contingent surrender charges with bail-out rates which are a function of an external index, a judgment as to the availability of the surrender charges may be made by comparing historical values of the function with corresponding values of the calendar year statutory valuation interest rate for life insurance with guarantee duration in excess of twenty years. If the values of the function have generally been less than or equal to the valuation rates, then the surrender charges may be treated as available.

7. For the purpose of this Appendix, in the case of a variable annuity that offers the policyholder a choice of multiple investment options, a surrender charge that may be waived for all of the accounts of the contract by reference to one or more of the accounts will be treated as a contingent surrender charge that may not be available upon cash surrender with respect to the entire contract. If no surrender charge is imposed on transfers among the accounts, and the surrender charge may be waived for one account, provided the formula for the availability of the waiver is set at the date of issuance, then the surrender charge will be treated as a contingent surrender charge that may not be available upon cash surrender with respect to the entire contract.
Accounting Practices and Procedures Manual
Effective January 1, 2001
Version 1999

Appendix C

Issue Papers
Statutory Issue Paper No. 1

Title:
Consolidation of Majority-owned Subsidiaries

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Currently, statutory reporting entities do not consolidate the financial statements of a majority-owned subsidiary in their annual statement filing. Investments in majority-owned subsidiaries are reported in Schedule D of the Annual Statement as other investments of a similar type (e.g., common stock and preferred stock) and are valued in accordance with the procedures outlined in the Purposes and Procedures of the Securities Valuation Office of the National Association of Insurance Commissioners (SVO Purposes and Procedures). Current GAAP guidance is not consistent with this position and requires consolidation of majority-owned subsidiaries.

SUMMARY CONCLUSION:

2. The policy of not consolidating majority owned subsidiaries for individual entity statutory reporting is consistent with the recognition concept included in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts), therefore formal codification of such practice is recommended. The current statutory practice for recording the investment in majority-owned subsidiaries is also an accepted statutory accounting practice by all states.

3. Certain reporting entities who are members of an affiliated group may be required to prepare and issue consolidated or combined annual statements as supplemental information. These statements shall be prepared in accordance with NAIC guidelines.

DISCUSSION:

4. The policy of not consolidating majority-owned subsidiaries is consistent with the Recognition concept included in the Statement of Concepts. This concept states that one objective of statutory reporting is to reflect an entity’s ability to meet its policyholder obligations with the existence of readily marketable assets available when both current and future obligations are due. With an investment in subsidiaries, the cash flow generated by the investee may not be available to satisfy policyholder obligations. Therefore the asset that is readily marketable is the shares of ownership (e.g., common or preferred stock).

5. Other issue papers address specific statutory accounting principles which will be used in recording a reporting entity’s investment in insurance and non-insurance affiliates.
Valuation of the investment in subsidiaries and the reporting of the related income or loss as described in Chapter 6 of the Life APP and Chapter 5b in the SVO Purposes and Procedures is addressed in another issues paper.

Subsidiary is defined in Issue Paper No. 46 - Accounting for Investments in Subsidiary, Controlled and Affiliated Entities.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
6. Statutory accounting guidance defines a subsidiary, controlled, or affiliated ("SCA") entity in terms of controlling ownership in an entity's voting capital stock. Ownership of more than 50% provides "undisputed control" and when 50% or less of the outstanding stock is owned, "control is dependent upon the influence that the owner of that block of stock may have on the other holders of outstanding capital stock." Relevant guidance states that "Investments in SCA companies include debt security loans and preferred and common stock. In general, the accounting for each type of investment is the same as it would be for any other bond, preferred stock, or common stock investment except that there are some special valuation considerations." This precludes consolidation of subsidiaries for individual entity statutory reporting purposes.

Generally Accepted Accounting Principles
7. FAS 94 paragraph 13 (amending ARB 51 paragraphs 2 and 3), states:

2. The usual condition for a controlling financial interest is ownership of a majority voting interest, and, therefore, as a general rule ownership by one company, directly or indirectly, of over fifty percent of the outstanding voting shares of another company is a condition pointing toward consolidation. However, there are exceptions to this general rule. A majority-owned subsidiary shall not be consolidated if control is likely to be temporary or if it does not rest with the majority owner (as, for instance, if the subsidiary is in legal reorganization or in bankruptcy or operates under foreign exchange restrictions, controls, or other governmental imposed uncertainties so severe that they cast significant doubt on the parent's ability to control the subsidiary).

3. All majority-owned subsidiaries--all companies in which a parent has a controlling financial interest through direct or indirect ownership of a majority voting interest--shall be consolidated except those described in the last sentence of paragraph 2.

State Regulations
No accounting guidance was noted in the state regulations.
Statutory Issue Paper No. 2

Title:
Definition of Cash

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory guidance limits the classification of cash to include only “a medium of exchange that a bank will accept for deposit and allow an immediate credit to the depositor's account.” The statutory guidance also allows “temporary investments in the form of savings accounts and nonnegotiable certificates of deposit in qualified banks and trust companies” to be classified as cash. Nonnegotiable certificates of deposit are instruments whose title may only be transferred upon the agreement of the affected parties to the terms and conditions of the transfer and not upon endorsement and delivery or delivery alone.

2. Additionally, current statutory practice allows reporting of negative cash as a negative asset. This treatment is consistent with the conservatism concept discussed in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

Cash Definition
3. Cash constitutes a medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor’s account. Also classified as cash for financial statement purposes, although not falling within the above definition of cash, are savings accounts and certificates of deposit in banks or other similar financial institutions with maturity dates in one year or less from the financial statement date and cash equivalents. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less qualify under this definition.

Treatment of Negative Cash Balances
4. If a reporting entity has multiple cash accounts, the net amount of all such accounts shall be reported jointly. Cash accounts with positive balances shall not be reported separately from cash accounts with negative balances. If in the aggregate, the reporting entity has a net negative cash balance, this amount shall be reported as such in the annual statement and shall not be recorded as a liability.
DISCUSSION:

5. As stated in the Statement of Concepts, "the cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders." Additionally, it states "the ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due." The definition of cash is consistent with the Statement of Concepts. Those instruments not included in the definition of cash (e.g., commercial paper and overnight repurchase agreements) shall be shown separately as short-term investments.

6. Treating all certificates of deposit with maturity dates in one year or less from the financial statement date as cash is a change from current statutory accounting. This change was made to address inconsistencies in the guidance between the Accounting Practices and Procedures Manuals for Property and Casualty Insurance Companies and Life and Accident and Health Insurance Companies (P&C and Life/A&H Accounting Practices and Procedures Manuals) and The Purposes and Procedures of the Securities Valuation Office of the National Association of Insurance Commissioners (SVO Purposes and Procedures). The P&C and Life/A&H Accounting Practices and Procedures Manuals require all nonnegotiable certificates of deposit to be classified as cash and negotiable certificates of deposit to be classified as short-term investments or bonds depending on the length to maturity at acquisition. The SVO Purposes and Procedures requires both negotiable and nonnegotiable certificates of deposit to be submitted to the SVO and valued under the general provisions for valuing bonds.

7. The treatment of recording negative cash as a negative asset in the statutory balance sheet follows the concept of conservatism as many regulatory limitations are calculated based upon total admitted assets.

Drafting Notes/Comments
- Funds classified as cash which are not immediately available for the benefit of policyholders (i.e., restricted cash, trust accounts, etc.) is addressed in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets.
- Treatment of drafts issued and drafts honored will be addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
8. Existing statutory accounting guidance specifically addresses assets qualifying for treatment and classification as cash. Statutory accounting classifies certain assets as being either cash, short-term or long-term investments. The P&C Accounting Practices and Procedures Manual defines cash as follows:

   The asset must be a medium of exchange that a bank will accept for deposit and allow an immediate credit to the depositor's account. Also classified for financial statement purposes, although not falling within the above description of cash, are temporary investments in the form of saving accounts and nonnegotiable certificates of deposit in qualified banks and trust companies.

There is a similar definition of cash in the Life/A&H Accounting Practices and Procedures Manual.

9. Section 2(C)(7) of the SVO Purposes and Procedures indicates the following requirements for certificates of deposit: "Certificates of Deposit (negotiable and non-negotiable) will be considered under the general provisions of Section 2(B)."
Generally Accepted Accounting Principles
10. GAAP adds a "cash equivalent" category for instruments classified as cash. GAAP literature defines a cash equivalent to be short-term, highly liquid investments that are readily convertible to known amounts of cash and are so near their maturity that they present insignificant risk of changes in value because of changes in interest rates.

Statutory Issue Paper No. 3

Title:
Accounting Changes

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Statutory accounting and GAAP differ in accounting for corrections of errors and certain changes in accounting. Statutory accounting and GAAP are similar in their treatment of mergers and changes in reporting entities. The purpose of this issue paper is to codify statutory guidance and to expand disclosure requirements for changes in accounting, which include changes in accounting principle, estimate, and reporting entity, and for correction of an error in previously issued financial statements in order to achieve the concept of consistency/comparability as defined in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

2. The term accounting change means a change in an accounting principle, an accounting estimate or the reporting entity. The correction of an error in previously issued financial statements is not deemed to be an accounting change.

Accounting Principle

3. A change in accounting principle results from the adoption of an accepted accounting principle different from the one previously used for reporting purposes. An accounting principle includes not only accounting principles and practices but also the methods of applying them.

4. A characteristic of a change in accounting principle is that it concerns a choice from among two or more accounting principles. However, neither (a) initial adoption of an accounting principle in recognition of events or transactions occurring for the first time or that previously were immaterial in their effect nor (b) adoption or modification of an accounting principle necessitated by transactions or events that are clearly different in substance from those previously occurring is a change in accounting principle.

Accounting Estimate

5. Changes in estimates used in accounting are necessary consequences of periodic presentations of financial statements which require estimating the effects of future events. Examples of items for which estimates are necessary include service lives of depreciable assets and uncollectable receivables. Accounting estimates change as new events occur, as more experience is acquired, or as additional information is obtained.

Correction of an Error

6. Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles or oversight or misuse of facts that existed at the time the financial statements were prepared. In contrast, a change in accounting estimate results from new information or subsequent
developments and accordingly from better insight or improved judgment. Thus an error is distinguished from a change in estimate.

7. Current statutory treatment shall be retained as follows:

- Changes in accounting principles and corrections of errors in previously reported financial statements shall be reported as adjustments to surplus in the period of the change in accounting principle or the period an error is detected.
- A change in the method of applying an accounting principle shall be considered as a change in accounting principle for purposes of applying the accounting principles set forth in this paper.
- A change in accounting estimate shall be included in the statement of income in the period when the change becomes known.

8. If the effect of a change in accounting principle is inseparable from the effect of a change in accounting estimate, then the change shall be considered as a change in accounting estimate for purposes of applying the accounting principles set forth in this paper. The treatment of a change resulting from an insurance department examination will depend on whether the change resulted from a correction of an error, a change in accounting principle or a change in estimate.

9. Material changes which do not affect assets, liabilities, revenues, expenses or surplus but which do affect historical information in the financial statement supplemental schedules (e.g., Schedule P) shall be reflected in the current years’ schedules with appropriate notations made directly to the affected schedules and in the notes to the financial statement.

10. For mergers, restatement of prior years’ amounts in the Annual Statement shall be required. Additionally, restatement shall be required for the two most recent years’ included in the Five Year Historical Summary. The Five Year Historical Summary shall include a footnote that the other three years have not been restated. A company that merges with an entity which effectively is a shell company (i.e., the other entity has no outstanding underwriting liabilities), shall be exempt from the above requirements.

Disclosures
11. Disclosure of material changes in accounting and correction of errors shall include:

- a brief description of the change, encompassing a general disclosure of the reason and justification for change or correction.
- the impact of the change or correction on net income, surplus, total assets and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations).
- the effect on net income of the current period shall be disclosed for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material.

DISCUSSION:

12. Accounting Principles Board Opinion No. 9, Reporting the Results of Operations (APB 9) and Accounting Principles Board Opinion No. 20, Accounting Changes (APB 20) address GAAP accounting and reporting for accounting changes. Portions of these pronouncements are not applicable to statutory
accounting and some of the guidance is not consistent with statutory objectives. Therefore, rejection of APB 20 in its entirety and the portions of APB 9 that address the treatment of extraordinary items and prior period adjustments is recommended.

13. The consistency concept within the Statement of Concepts is concerned with the regulator’s need for meaningful, comparable financial information to determine an entity’s financial condition through consistency in the development and application of statutory accounting principles. In keeping with the Statement of Concepts, comparability of financial information would be best served by the restatement of prior year financial information for certain changes in accounting principle as well as the correction of an error in the previous year. However, existing statutory accounting guidance and practice requires such an item to be shown as an adjustment to surplus. In order to bridge the gap between current statutory accounting guidance and the achievement of comparability sought by the Statement of Concepts, additional disclosure as to the general description and the effect of such changes on income and surplus for all periods presented would provide the financial statement reader enough information to understand the effect of such change on consistency between periods.

14. The modification of existing statutory accounting for additional disclosure relating to changes between years and correction of prior errors bridges the gap between GAAP accounting as required by APB 20 and APB 9. More importantly, the added disclosure bridges the gap between current statutory procedures and the concept of consistency/comparability required by the Statement of Concepts.

Drafting Notes/Comments:
- Accounting for Consolidations of Majority-owned Subsidiaries is addressed in a separate issue paper (see Issue Paper No. 1).
- Accounting for mergers is addressed in a separate issue paper. This may include an expansion of the traditional definition of a merger to include all combinations or assumptions which, in substance, are mergers.
- Extraordinary items are discussed in a separate issue paper.
- Specific discussion regarding reserve changes including a change in valuation basis is addressed in a separate paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
15. Statutory accounting is specific as to the treatment of accounting changes. The primary statutory accounting guidance is the NAIC Annual Statement Instructions (Annual Statement Instructions). Summarized, the Annual Statement Instructions specify that a change in accounting principle or the correction of an error is to be reported as an adjustment to surplus. Changes in accounting estimates are to be included in the statement of income for the current period. The treatment for a merger requires that prior year’s amounts be restated and reported on a merged basis consistent with the current year’s post-merger reporting basis.

16. The issues of changes in accounting principles and estimates are not specifically addressed in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies.

17. Chapter 10 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, in a discussion on recoveries from salvage and subrogation, states that:

Companies which have previously reported reserves gross of salvage and subrogation should report the change to the net method as a change in accounting principle. The cumulative effect on
prior years of this change should be reported as a write-in item in the surplus section of the annual statement. The change in the reserve calculated using the net method should be included in net income for the year of the change and all future years.

18. The Annual Statement Instructions (which documents the conclusions reached by the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force in meeting 92-1) addresses accounting changes. The instructions state that:

Amounts reported in prior years may need to be adjusted in the current year as a result of the following:

Changes in accounting principles or practices or changes in the methods of applying accounting principles or practices.

Changes in accounting estimates as a result of new events or new information.

Corrections of errors in previously filed information.

A merger.

If changes are required for amounts reported in prior years, such changes should be included in the amounts reported for the current year and the effects of such changes should be reported as follows, unless these Instructions or the NAIC Accounting Practices and Procedures manual specifically provide for a different treatment:

1. The cumulative effect of a change in accounting principles or practices or a change in the method of applying accounting principles or practices should be reported with an appropriate identifying title as a write-in item for gains and losses in surplus. The cumulative effect of changing to a new accounting principle is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods. An example of a change in accounting principles would be a change in the method of accounting for pensions or other post-employment benefits.

2. The effects of changes in accounting estimates are included in income and expenses in the Statement of Income for the current year. For example, a change in the estimate of loss reserves for losses related to prior years should be included in the Statement of Income in losses incurred for the current year.

3. The effects of changes resulting from corrections of errors in previously filed information (for example, mathematical mistakes, misapplication of accounting principles, or oversight or misuse of facts) should be reported as an adjustment to surplus in the current year. Such adjustments to surplus should be reported with an appropriate identifying title as a write-in item for gains and losses in surplus.

4. In the case of a merger, prior years' amounts reported for assets, liabilities, surplus, revenues and expenses, as well as those amounts reflected in supporting Annual Statement schedules, should be reported on a merged basis consistent with the current year's post-merger reporting basis. A footnote should be inserted on each page of the Annual Statement which contains such merged amounts clearly detailing the circumstances.

If one of the above described adjustments is required that does not affect assets, liabilities, revenues or expenses but which does adjust historical information, such as that found in Schedule P, the change may be made in the currently filed annual statements; however,
appropriate notations of such adjustments should be made directly on the schedules affected and in the notes to the Financial Statements.

**Generally Accepted Accounting Principles**

19. Statutory accounting treatment is similar to GAAP except for the following:

- when reporting changes in accounting principles, GAAP accounting requires that the cumulative effect of a change be reported in the statement of income as a separate line item. Statutory accounting requires this to be shown as a separate component of surplus.
- GAAP accounting requires that corrections of errors be reported as prior period adjustments with adjustment to the prior year income and surplus.
- accounting for changes in a reporting entity includes several circumstances in which there may be a change in reporting entity. The only relevant area as it applies to Statutory Accounting is that of a merger. As such, this is the only area which Statutory Accounting specifically addresses.

20. The primary GAAP accounting guidance with respect to accounting changes comes from APB 20, paragraph 19, which states that changes in accounting principles are to be reported as follows:

a. Financial statements for prior periods included for comparative purposes should be presented as previously reported.

b. The cumulative effect of changing to a new accounting principle on the amount of retained earnings at the beginning of the period in which the change is made should be included in net income of the period of the change.

c. The effect of adopting the new accounting principle on income before extraordinary items and on net income of the period of the change should be disclosed.

d. Income before extraordinary items and net income computed on a pro forma basis should be shown on the face of the income statements for all periods presented as if the newly adopted accounting principle had been applied during all periods affected.

21. APB 20 also states that changes in accounting estimates are to be accounted for as follows:

...the effect of a change in accounting estimate should be accounted for in

a. the period of change if the change affects that period only or

b. the period of change and future periods if the change affects both.

A change in an estimate should not be accounted for by restating amounts reported in financial statements of prior periods or by reporting pro forma amounts for prior periods.

22. For changes in the reporting entity (e.g., a merger), APB 20 states the following:

...accounting changes which result in financial statements that are in effect the statements of a different reporting entity should be reported by restating the financial statements of all prior periods presented in order to show financial information for the new reporting entity for all periods.

23. For changes in accounting principles inseparable from changes in accounting estimates, APB 20 states:

Changes of this type are often related to the continuing process of obtaining additional information and revising estimates and are therefore considered as changes in estimates for purposes of applying this Opinion.

24. Lastly, according to APB 20, corrections of errors are to be accounted for as follows:
Correction of an error in the financial statements of a prior period discovered subsequent to their issuance should be reported as a prior period adjustment.

25. GAAP accounting provides guidance with respect to the accounting for prior period adjustments in APB 9, paragraph 18. APB 9 states that "When comparative statements are presented corresponding adjustments should be made of the amounts of net income (and the components thereof) and retained earnings balances (as well as of other affected balances) for all of the periods reported therein, to reflect the retroactive application of the prior period adjustments." Additionally, APB 9 requires footnote disclosures regarding such changes.

Statutory Issue Paper No. 4

Title:
Definition of Assets and Nonadmitted Assets

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. One of the cornerstones of the statutory accounting model is the use of nonadmitted assets. This concept interjects a level of conservatism in the reporting of an insurance enterprise’s statutory financial position and is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). Currently, statutory accounting does not address the general definition of assets as used in the statutory accounting model. Furthermore, statutory accounting is not explicit and is sometimes inconsistent with regard to the guidelines for accounting for nonadmitted assets. Current guidance allows the establishment of an asset. This asset is charged against surplus as a nonadmitted asset, and is also depreciated or amortized against net income as its estimated economic benefit expires. Current guidance also allows in limited circumstances for a nonadmitted asset to be charged through operations when acquired.

The purpose of this issue paper is to provide a definition of an “asset” for use in statutory accounting and establish consistent treatment of nonadmitted assets.

SUMMARY CONCLUSION:

2. For purposes of statutory accounting, an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others’ access to it, and (c) the transaction or other event giving rise to the entity’s right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph number 3 below.

1 FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements (CON 6), states:

Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement No. 5, Accounting for Contingencies, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved...

3. As stated in the Statement of Concepts, “The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be
recognized on the balance sheet”, and are, therefore, considered nonadmitted. For purposes of the Codification, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2 above, which is accorded limited or no value in statutory reporting and is one which is:

a. Specifically identified within the Codification as a nonadmitted asset or

b. Not specifically identified within the Codification as an admitted asset.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Codification. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity’s capitalization policy, immaterial amounts of furniture, fixtures, and equipment, or supplies, can be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of an asset, but are specifically identified within the Codification as not giving rise to assets (e.g., policy acquisition cost), shall also be charged to operations in the period the transactions occur.

DISCUSSION:

5. The Accounting Practices and Procedures Manuals for Property and Casualty and for Life and Accident and Health Insurance Companies define the term nonadmitted asset as an asset that has been “accorded limited or no value in statutory reporting”. Chapter 9 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies further elaborates by saying, “Some assets may be nonadmitted because they do not conform to the laws and regulations of the various states and other assets may be nonadmitted because they are not readily convertible to liquid assets.” Chapter 9 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies includes a similar discussion.

6. The concept of nonadmitted assets can be traced back to the 1874 Association Blank, thus establishing general acceptance through universal use. Statutory accounting does not specifically address the general definition of an asset. CON 6, which was adopted as part of the framework to be utilized in the Codification, does provide a general definition of assets. This provides an appropriate measure for statutory assets.

7. The adoption of the above accounting principles will be consistent with the recognition concept within the Statement of Concepts (i.e., the ability to meet policyholder obligations as predicated on the existence of readily marketable assets available when both current and future obligations are due).

Drafting Notes/Comments
- Accounting Practices and Procedures manual states that non-admittance of accrued investment income is to be recorded as a reduction of investment income. This is specifically addressed in a separate issue paper.
- Deferred premiums is addressed in a separate issue paper.
RELEVANT STATUROTY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
8. Statutory accounting in this area is general and somewhat inconsistent. The prefaces to the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies state:

State statutes and accompanying regulations generally define what may be included as assets on a balance sheet, i.e., admitted assets. Because of the conservatism intrinsic to insurance accounting, certain assets may be accorded limited or no value in statutory reporting, i.e., nonadmitted assets. The investments a company is permitted to make and the limitations and methods of valuation for inclusion as admitted assets are usually specified. Also, because of the nature of the calculation of certain liabilities, offsetting of assets is permitted in order to maintain consistency. The discussion of assets in Part One includes certain nonadmitted as well as admitted assets.

9. Chapter 9 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies discusses the accounting for periodic transactions for nonadmitted assets as follows:

Some assets or portions thereof may be nonadmitted because they do not conform to the laws and regulations of the various states. As a result, certain assets which normally would be accorded value in noninsurance corporations are accorded no value and thus reduce the reported surplus of the insurance company. In addition, state regulations require that certain expenditures which could normally be capitalized by a non-insurance company be charged as an expense.

Changes between years in nonadmitted assets are usually charged directly to surplus. The change between years in nonadmitted investment income due or accrued, though, is reported as a component of investment income in the summary of operations.

Even though a state insurance code may prohibit or limit certain assets, these assets are generally carried in the company's general ledger. Depreciable assets are depreciated in a systematic and rational manner over their estimated useful lives.

10. Chapter 9 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies states:

Because, in many respects, the statutory balance sheet is presented on a conservative basis, certain assets (which may have a recognized value in noninsurance corporations) are accorded no value and thus reduce the reported surplus of the insurance company. Some assets may be nonadmitted because they do not conform to the laws and regulations of the various states and other assets may be nonadmitted because they are not readily convertible to liquid assets. Changes in the amount of nonadmitted assets are charged or credited directly to surplus.

Each chapter in this book relating to investments discusses the limitations in amount and quality of investments that are treated as admitted. In general, authorized investments that are within the limitations of the laws and regulations of the various states are considered to be admitted assets. Investments exceeding the limitations, or those of questionable quality, may be nonadmitted.

11. Chapter 9 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies also provides some general guidance on certain nonadmitted assets. A sample follows:
Electronic Data Processing Equipment: Application systems software may be expensed when purchased or established as a nonadmitted asset and written off over a period of years not to exceed the software's expected useful life.

Equipment, Furniture and Supplies: The company may record furniture and equipment as a ledger asset, depreciate it, and nonadmit it in the exhibit of assets in the statutory financial statements, or the company may expense the furniture and equipment when it is purchased. Supplies are normally expensed when purchased.

**Generally Accepted Accounting Principles**

12. Asset recognition is governed by FASB Statement of Financial Accounting Concepts No. 6, *Elements of Financial Statements* (CON 6), paragraphs 25 - 34. An asset is defined in paragraph 25 of CON 6 as follows:

Assets are probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

13. Paragraph 26 of CON 6, further defines the characteristics of an asset as follows:

An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.

Statutory Issue Paper No. 5

Title:
Definition of Liabilities, Loss Contingencies and Impairments of Assets

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Statutory accounting currently does not define the term liability for use in preparation of statutory financial statements. Statutory accounting does address the accounting for certain liabilities within the statutory framework. The current statutory accounting guidance results in some confusion about when the recording of a liability, loss contingency or impairment of an asset is required outside the specific guidance prescribed by statutory accounting. The purpose of this issue paper is to provide a definition of a “liability” for statutory accounting purposes and to provide the accounting principles to be followed when recording such a liability in statutory financial statements. This paper also establishes the criteria for recording loss contingencies and impairments of assets.

SUMMARY CONCLUSION:

Liabilities

2. For purposes of statutory accounting, a “liability” shall be defined as certain or probable\(^1\) future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transaction(s) or event(s). A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable\(^1\) future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes but is not limited to liabilities arising from policyholder obligations (e.g. policyholders benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a Company’s financial statements when incurred.

\(^1\)FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements (CON 6), states:

Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement 5, Accounting for Contingencies, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved...

3. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.
Loss Contingencies or Impairments of Assets

4. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below the following additional definitions shall apply:

Probable - The future event or events are likely to occur.

Reasonably Possible - The chance of the future event or events occurring is more than remote but less than probable.

Remote - The chance of the future event or events occurring is slight.

5. A “loss contingency” or “impairment of an asset” is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).

6. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability, and

b. The amount of loss can be reasonably estimated.

7. This accounting shall be followed even though the application of other prescribed statutory accounting principles or valuation criteria may not require, or does not address, the recording of a particular liability or impairment of an asset (e.g., known impairment of an invested asset even though published SVO manual has not recognized impairment).

8. Additionally, in instances where a judgment, assessment or fine has been rendered against a company, there is a presumption that the criteria in paragraph 6 a. and 6 b. have been met. The amount of the liability shall include the anticipated settlement amount, legal costs, insurance recoveries and other related amounts and shall take into account factors such as the nature of the litigation, progress of the case, opinions of legal counsel, and management’s intended response to the litigation, claim, or assessment.

9. When condition 6 a. above is met with respect to a particular loss contingency, and the reasonable estimate of the loss is a range, which meets condition 6 b. above, an amount shall be accrued for the loss. When an amount within management’s estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be accrued. When no amount within the range is a better estimate than any other amount, however, the midpoint (mean) in the range shall be accrued. For purposes of this paragraph, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management’s best estimate shall be used.

Disclosure

10. If a loss contingency or impairment of an asset is not recorded because only one of the conditions 6 a. or 6 b. is met, or if exposure to a loss exists in excess of the amount accrued pursuant to the provisions described above, disclosure of the loss contingency or impairment of the asset shall be made in the notes to the financial statements when there is at least a reasonable possibility that a loss or an additional loss
may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made.

11. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

12. Certain loss contingencies, the common characteristic of each being a guarantee, shall be disclosed in financial statements even though the possibility of loss may be remote. Examples include (a) guarantees of indebtedness of others, and (b) guarantees to repurchase receivables (or, in some cases, to repurchase related properties) that have been sold or otherwise assigned. The disclosure of those loss contingencies, and others that in substance have the same characteristics, shall be applied to statutory financial statements. The disclosure shall include the nature and amount of the guarantee. Consideration shall be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor’s right to proceed against an outside party.

DISCUSSION:

13. The Conclusion above adopts certain principles in FASB Statement No. 5, Accounting for Contingencies (FAS 5), FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan (FAS 114) – only as it amends in part FAS 5, and paragraphs 35 and 36 of FASB Statement of Concepts No. 6—Elements of Financial Statements. FASB Interpretation No. 14, Reasonable Estimation of Amounts of a Loss, An Interpretation of FASB Statement No. 5 is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum. This issue paper also adopts FASB Interpretation No. 34, Disclosure of Indirect Guarantees of Indebtedness of Others, An interpretation of FASB Statement No. 5, and Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967, paragraphs 2 and 3.

14. Although the above accounting principles are not specifically discussed in current statutory accounting literature, these principles are well established in the determination of policy reserves in the life insurance and property and casualty accounting models. Both models use actuarial methods to establish the accounting estimates recorded. Obligations incurred in the normal conduct of business (e.g., obligations to pay employees, obligations to pay for assets or services acquired, etc.) represent other examples of applying the accounting principles described above.

15. Consistent with the solvency and conservatism concepts in the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy, the statutory accounting model uses numerous accounting methods to accomplish the objective of reporting a company’s statutory financial position to demonstrate solvency. These accounting methods (nonadmitted assets, Asset Valuation Reserves, etc.) normally do not meet the criteria required in applying the accounting principles described in the Conclusion above. Therefore, such accounting methods should be applied by direct charges to or appropriation of a Company’s surplus. Notwithstanding the application of these statutory accounting methods, when an event, situation, transaction or other information comes to the financial statement preparer’s attention that indicates a liability or loss has been incurred or that an asset has been impaired, the accounting principles described in the Conclusion above should be followed.

16. Paragraph 9 provides guidance on recording an estimate which lies within an estimated range. It is anticipated that using the midpoint in a range will be applicable only in the rare instance where there is a continuous range of possible values, and no amount within that range is any more probable than any other. This guidance is not applicable when there are several point estimates which have been determined
as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine their best estimate of the liability.

17. Disclosure of the nature of accruals made in applying the above statutory accounting principle and in some circumstances the amount accrued may be necessary for the fair presentation of the statutory financial statements.

Drafting Notes/Comments
- Appropriation of retained earnings and gain contingencies (e.g., paragraphs 15 and 17 of FAS 5) are covered in separate issue papers.
- FASB Statement No. 114, Accounting by Creditors for Impairment of a Loan, is addressed in its entirety in a separate issue paper.
- Impairment of mortgage loans, real estate investments and other invested assets are addressed in separate issue papers.
- Policy, loss and claim reserves are addressed in separate issue papers.
- Surplus notes is addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
18. As discussed above, current statutory accounting is limited to dealing with specific asset and liability captions included on a company’s statement of financial position.

Generally Accepted Accounting Principles
19. Relevant sections of GAAP literature follow:

FASB Statement of Concepts No. 6 - Elements of Financial Statements

35. Liabilities are probable future sacrifices of economic benefits arising from obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

21 Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in Statement 5, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved (Webster’s New World Dictionary, p. 1132). Its inclusion in the definition is intended to acknowledge that business and other economic activities occur in an environment characterized by uncertainty in which few outcomes are certain (pars. 44-48).

22 Obligations in the definition is broader than legal obligations. It is used with its usual general meaning to refer to duties imposed legally or socially, to that which one is bound to do by contract, promise, moral responsibility, and so forth (Webster’s New World Dictionary, p. 981). It includes equitable and constructive obligations as well as legal obligations (pars. 37-40).

36. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. Liabilities commonly have other features that help identify them - for example, most liabilities require the obligated entity to pay cash to one or more identified other entities and are legally enforceable. However, those features are not essential characteristics of liabilities. Their
absence, by itself, is not sufficient to preclude an item's qualifying as a liability. That is, liabilities may not require an entity to pay cash but to convey other assets, to provide or stand ready to provide services, or to use assets. And the identity of the recipient need not be known to the obligated entity before the time of settlement. Similarly, although most liabilities rest generally on a foundation of legal rights and duties, existence of a legally enforceable claim is not a prerequisite for an obligation to qualify as a liability if for other reasons the entity has the duty or responsibility to pay cash, to transfer other assets, or to provide services to another entity.

**FASB Statement No. 5 - Loss Contingencies**

1. For the purpose of this Statement, a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a "gain contingency") or loss\(^1\) (hereinafter a "loss contingency") to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.

\(^1\) The term *loss* is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.

2. Not all uncertainties inherent in the accounting process give rise to contingencies as that term is used in this Statement. Estimates are required in financial statements for many on-going and recurring activities of an enterprises. The mere fact that an estimate is involved does not of itself constitute the type of uncertainty referred to in the definition in paragraph 1. For example, the fact that estimates are used to allocate the known cost of a depreciable asset over the period of use by an enterprise does not make depreciation a contingency; the eventual expiration of the utility of the asset is not uncertain. Thus, depreciation of assets is not a contingency as defined in paragraph 1, nor are such matters as recurring repairs, maintenance, and overhauls, which interrelate with depreciation. Also, amounts owed for services received, such as advertising and utilities, are not contingencies even though the accrued amounts may have been estimated; there is nothing uncertain about the fact that those obligations have been incurred.

3. When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms *probable, reasonably possible*, and *remote* to identify three areas within that range, as follows:

a. **Probable.** The future event or events are likely to occur.

b. **Reasonably possible.** The chance of the future event or events occurring is more than remote but less than likely.

c. **Remote.** The chance of the future event or events occurring is slight.
Accrual of Loss Contingencies

8. An estimated loss from a loss contingency (as defined in paragraph 1) shall be accrued by a charge to income if both of the following conditions are met:

a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements. It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.

b) The amount of loss can be reasonably estimated.

3 Paragraphs 23-24 of APB Opinion No. 9, "Reporting the Results of Operations," describe the "rare" circumstances in which a prior period adjustment is appropriate. Those paragraphs are not amended by this Statement.

4 Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

Disclosure of Loss Contingencies

9. Disclosure of the nature of an accrual made pursuant to the provisions of paragraph 8, and in some circumstances the amount accrued, may be necessary for the financial statements not to be misleading.

10. If no accrual is made for a loss contingency because one or both of the conditions in paragraph 8 are not met, or if an exposure to loss exists in excess of the amount accrued pursuant to the provisions of paragraph 8, disclosure of the contingency shall be made when there is at least a reasonable possibility that a loss or an additional loss may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

5 Terminology used shall be descriptive of the nature of the accrual (see paragraphs 57-64 of Accounting Terminology Bulletin No. 1, "Review and Resume").

6 For example, disclosure shall be made of any loss contingency that meets the condition in paragraph 8(a) but that is not accrued because the amount of loss cannot be reasonably estimated (paragraph 8(b)). Disclosure is also required of some loss contingencies that do not meet the condition in paragraph 8(a) - namely, those contingencies for which there is a reasonable possibility that a loss may have been incurred even though information may not indicate that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.
FASB Interpretation No. 14 - *Reasonable Estimation of the Amount of Loss, An Interpretation of FASB Statement No. 5*

3. When condition (a) in paragraph 8 is met with respect to a particular loss contingency and the reasonable estimate of the loss is a range, condition (b) in paragraph 8 is met and an amount shall be accrued for the loss. When some amount within the range appears at the time to be a better estimate than any other amount within the range, that amount shall be accrued. When no amount within the range is a better estimate than any other amount, however, the minimum amount in the range shall be accrued.\(^1\) In addition, paragraph 9 of the Statement may require disclosure of the nature and, in some circumstances, the amount accrued, and paragraph 10 requires disclosure of the nature of the contingency and the additional exposure to loss if there is at least a reasonable possibility of loss in excess of the amount accrued.

\(^1\) Even though the minimum amount in the range is not necessarily the amount of loss that will be ultimately determined, it is not likely that the ultimate loss will be less than the minimum amount.

Statutory Issue Paper No. 6

Title:
Amounts Due From Agents and Brokers

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Some reporting entities conduct a significant amount of their business through insurance agents and brokers. For purposes of this issue paper the term agent will be used as reference to both entities. In the ordinary course of business, amounts may be due from or payable to agents by a reporting entity. Business reasons for these transactions vary between each type of entity transacting business with the reporting entity. These variations may be the result of formal contractual requirements, the nature of the insurance products being sold or the services being performed. Statutory accounting for amounts due from agents is not addressed in sufficient detail in either the Accounting Practices and Procedures Manuals for Life and Accident and Health or for Property and Casualty Insurance Companies. Additionally, interpretation and application of accounting practices dealing with amounts due from agents are inconsistent among states. This issue paper establishes a framework for the accounting and reporting of amounts due from agents and brokers (collectively referred to as “agents”) that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

2. Amounts due from agents can result from various insurance transactions ranging from premiums collected on behalf of the reporting entity to amounts advanced to the agent by the reporting entity to finance agency operations. Premiums owed by the agent shall be reflected net of commissions, if permitted by the contract. In almost all cases these transactions result in an amount due to the reporting entity that meets the definition of an asset as set forth in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets. First, an evaluation shall be made to determine nonadmitted amounts. Next, an evaluation shall be made of such assets in accordance with Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets (Issue Paper No. 5), to determine whether there is an impairment. This two step process is set forth below:

   a. The uncollected agent's receivable which is over ninety days due shall be accounted for as a nonadmitted asset regardless of any offsetting amount (e.g., unearned premium).

   b. Remaining amounts determined to be uncollectible shall be written off: If, in accordance with Issue Paper No. 5, it is probable the agent's receivable is uncollectible, any uncollectible agent's receivable shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible and is therefore not written off, disclosure requirements outlined in Issue Paper No. 5 shall be followed.
3. Advances to agents - All such balances, which are primarily encountered in the life insurance industry, are nonadmitted if a) the amounts are in the form of unsecured loans or advances, or b) the contractual terms for repayment are through application of future renewal commissions and/or other credits, or c) the terms of repayment do not provide readily available cash for the satisfaction of policyholder liabilities.

4. The following situations provide additional guidance in determining the nonadmitted portion of agent's balances as discussed above:

a. Amounts payable to agents under the same contractual agreement - If amounts are both payable to and receivable from an agent, and the contractual agreements between the agent and the reporting entity permit offsetting, then the nonadmitted portion of amounts due from that agent should be calculated on the net balance due.

b. Amounts due from agents (affiliated or nonaffiliated) paid prior to the date of the financial statements and repaid to the agent by the reporting entity or one of the reporting entity's affiliates subsequent to the date of the financial statements - Such amounts should be accounted for in accordance with the substance of the transaction (a "wash" transaction) and not its form. Accordingly, the amounts due should be reestablished as an asset and subjected to asset collectibility and nonadmitted asset calculations using the original due date of the receivable. Short-term financing by third parties should also be considered "wash" transactions if the substance of the transaction is to avoid the nonadmitted asset principle set forth above.

c. Amounts classified as nonadmitted assets collected subsequent to date of the statutory financial statements - Such amounts shall not be used to adjust the nonadmitted asset otherwise calculated.

d. Determination of the Due Date -
   i. The due date for original and deposit premiums is governed by the effective date of the underlying insurance contract and not the agent/reporting entity contractual relationship.
   ii. The due date for endorsement and installment premiums is governed by the effective date of the endorsement and the contractual due date of the installment.
   iii. The due date for audit premiums and retrospective premiums is governed by policy or contract provisions. If the due date for receivables relating to these policies is not addressed by policy provisions or contract provisions, any uncollected premium (either accrued or billed) is nonadmitted.
   iv. These provisions are to be applied to all balances due except those arising from force placed insurance obtained by a lender for collateral protection, certain policies, known as a Trustee Sales Guarantees (TSGs), issued by title insurance companies to lenders on defaulted real estate loans and crop/hail policies. For forced placed insurance, the due date for purposes of applying paragraph 2 shall be the date of billing. For TSG policies, the due date for purposes of applying paragraph 2 shall be at the expiration of the grace period given to the defaulted debtor, which is provided by statute. Crop/hail premiums are considered installment premiums in accordance with paragraph 4.d.ii. and accordingly, the due date for purposes of applying paragraph 2 shall be governed by the contractual due date of the installment.
e. Reconciling items between a Reporting Entity's Account and Agent's Account - If such amounts are over ninety days due, the amounts shall be nonadmitted.

**DISCUSSION:**

5. The Statement of Concepts states:

> The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

6. Based upon the above concept, agents' balances should reflect only amounts that are available to meet both current and future policyholder obligations when the obligations are due. Therefore, amounts determined to be impaired, regardless of aging, should be charged to operations. The adoption of a write-off/allowance methodology will provide a more appropriate measure of those assets available to meet policyholder obligations.

7. Under the conservatism concept of statutory accounting, premiums and other amounts collected by the agents on behalf of the reporting entity, which are over 90 days due and advances made to an agent, should be treated as nonadmitted assets and charged to surplus. In keeping with the concept of conservatism, subsequent collection of nonadmitted assets should not be considered in the determining period-end nonadmitted assets. These recoveries should be accounted for in the period received.

8. The draft discussion materials from previous Property/Casualty codification projects suggested aging of all original or renewal premiums receivable to begin as of the effective date of the policy regardless of whether the reporting entity is using a direct bill or account current system. In addition, the proposed version requires endorsement premiums and installment premiums to begin aging from the effective date of the endorsement and from the due date of the installment. An exception is provided for force placed insurance and for certain title insurance policies known as TSGs. Force placed insurance is a type of collateral protection insurance typically offered to financial institutions and other lenders that make loans secured by collateral. Coverage is obtained by the lender when the collateral securing a loan becomes uninsured by the borrower. Due to the nature of this specific type of insurance most policies or certificates are not issued, and consequently not billed, until after the effective date of coverage. As a result, the due date for purposes of paragraph 2 is the date of billing. TSGs are title insurance policies issued to lending institutions during the foreclosure process on defaulted real estate loans. TSGs are requested by the lending institution, and premium is booked by the reporting entity at the notice of default date. There is, typically by law, a grace period given to the defaulted debtor to bring the loan current. Since the premium is remitted to the reporting entity from the proceeds of the foreclosed property this grace period results in a lag period before the premium could be collected. As a result, the due date for purposes of paragraph 2 is the date at which the grace period expires.

9. Current statutory accounting for life and accident and health companies generally requires agents' balances to be nonadmitted. This is not consistent with the treatment of such balances for property and casualty companies. The majority of agents' balances for life and accident and health companies consist of advances to agents under agents' contracts. This paper does not recommend a change for these types of balances. Advances to agents under agents' contracts would follow the treatment outlined in the Summary
Conclusion above. To the extent the agents' balance consists of amounts other than advances to agents under agents' contracts, the recommended treatment outlined in this paper is theoretically different from existing practice. Adoption of the principles outlined in the Summary Conclusion above for life and accident and health and property and casualty companies will provide necessary consistency without having a significant impact on the conservatism of the statutory financial statements.

Drafting Notes/Comments
- This issue paper does not address nonadmitted assets for retrospective premiums on direct or assumed business as this issue was addressed and codified by the NAIC in 1993. Current guidance is included in Chapter 22 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies. This is addressed in a separate issue paper.
- Reinsurance premiums payable, reinsurance commissions receivable, etc., which are currently reported on the same line in the Annual Statement, are addressed in a separate issue paper.
- In preparing this paper, the following issues were identified as future potential issue paper topics:
  - Right of Offset - (agent commissions, reinsurance premiums payable and receivable, etc.)
  - Aging/nonadmitting of reinsurance premiums due (governed by Chapter 22)
  - Premiums sold with recourse (premium finance company)
  - Accounting/aging of retrospective premiums currently reported on line 9.2 or line 9.3 is addressed in a separate issue paper.
- Accounting for uncollected premium balances is addressed in Issue Paper No. 10 - Uncollected Premium Balances.
- Accounting for bills receivable is addressed in Issue Paper No. 21 - Bills Receivable for Premiums.
- Sale of premium receivables will be addressed in Issue Paper No. 42 - Sale of Premium Receivables.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
10. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 7, Agents' Balances or Uncollected Premiums, page 2, paragraph 2, provides the following guidance:

   To satisfy the requirements of the annual statement blank, agents' balances or uncollected premiums over three months due are nonadmitted assets. (See Chapter 9 - Nonadmitted Assets, see excerpt below.)

11. Chapter 9, Nonadmitted Assets, page 1, point 3, reinforces Chapter 7 by stating the following:

   Agents' Balances or Uncollected Premiums Over Three Months Due: The statutes of most states require that agents' balances or uncollected premiums over three months due be nonadmitted because of the uncertainty of collection.

12. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies is silent with respect to when the aging of agents' balances and uncollected premiums is to commence, however, the Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force (Emerging Accounting Issues Working Group) reached a consensus in the 89-2 session which states the following:
Aging of Agents' Balances

The issues considered were:

1. In computing the non-admitted portion of agents' balances, should an agents' account current be aged from the dates of the account current statement or from the effective dates of the individual policies billed in the statements?
   
The consensus of the group was that accounts current should be aged from the dates of the statements.

2. How should balances be aged when the account current system is not used?
   
The balance should be aged from the effective date of the policy.

13. Chapter 9 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies discusses the nonadmitting of certain assets as follows:

Some examples of assets which are nonadmitted due to either an uncertainty as to their collectibility or an insufficient basis for determining their valuation or other reasons are:

1. deposits in suspended depositories;

2. agents' debit balances;

3. bills receivable which are not properly secured by collateral;

4. loans on personal security (endorsed or not) which are not properly secured by collateral;

5. cash advanced to or in the hands of officers or agents;

6. travel advances.

Generally Accepted Accounting Principles

14. GAAP accounting for agent balances or uncollectible premiums/receivables is governed by FASB Statement No. 5, Accounting for Contingencies (FAS 5), paragraphs 1, 3 and 8:

1. For the purpose of this Statement, a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a "gain contingency") or loss\(^1\) (hereinafter a "loss contingency") to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.

\(^1\)The term loss is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.

3. When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to
This Statement uses the terms probable, reasonably possible, and remote to identify three areas within that range, as follows:

a) Probable. The future event or events are likely to occur.

b) Reasonably possible. The chance of the future event or events occurring is more than remote but less than likely.

c) Remote. The chance of the future event or events occurring is slight.

8. An estimated loss from a loss contingency (as defined in paragraph 1) shall be accrued by a charge to income if both of the following conditions are met:

a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements. It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.

b) The amount of loss can be reasonably estimated.

---

3Paragraphs 23-24 of APB Opinion No. 9, “Reporting the Results of Operations,” describe the “rare” circumstances in which a prior period adjustment is appropriate. Those paragraphs are not amended by this statement.

4Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

15. The FAS 5 criteria above, is used in interpreting information such as historical trending and general information about the stability of the agents/insured in an effort to evaluate the adequacy of a premium receivable allowance. Accounting for contingencies is discussed in more detail in Issue Paper No. 5.

16. GAAP accounting requires the aging of agents’ balances or uncollected premiums to begin from the effective date of the policy. Aging for endorsement premiums should begin from the endorsement’s effective date and installment premiums should begin from the installment’s due date. Although not specifically stated, this guidance can be deduced through review of FASB Statement of Financial Accounting Concepts No. 5, Recognition and Measurement in Financial Statements of Business Enterprises, paragraph 83, as follows:

83. Further guidance for recognition of revenues and gains is intended to provide an acceptable level of assurance of the existence and amounts of revenues and gains before they are recognized. Revenues and gains of an enterprise during a period are generally measured by the exchange values of the assets (goods or services) or liabilities involved, and recognition involves consideration of two factors (a) being realized or realizable and (b) being earned, with sometimes one and sometimes the other being the more important consideration.

a. Realized or realizable. Revenues and gains generally are not recognized until realized or realizable. Revenues and gains are realized when products (goods or services), merchandise, or other assets are exchanged for cash or claims to cash. Revenues and
gains are realizable when related assets received or held are readily convertible to known amounts of cash or claims to cash. Readily convertible assets have (i) interchangeable (fungible) units and (ii) quoted prices available in an active market that can rapidly absorb the quantity held by the entity without significantly affecting the price.

b. Earned. Revenues are not recognized until earned. An entity's revenue earning activities involve delivering or producing goods, rendering services, or other activities that constitute its ongoing major or central operations,\textsuperscript{51} and revenues are considered to have been earned when the entity has substantially accomplished what it must do to be entitled to the benefits represented by the revenues. Gains commonly result from transactions and other events that involve no "earning process," and for recognizing gains, being earned is generally less significant than being realized or realizable.

\textsuperscript{50} The terms realized and realizable are used in the Board's conceptual framework in precise scenes, focusing on conversion or convertibility of noncash assets into cash or claims to cash (Concepts Statement 3, par. 83). Realized has sometimes been used in a different, broader sense; for example, some have used that term to include realizable or to include certain conversions of noncash assets into other assets that are also not cash or claims to cash. APB Statement 4, paragraphs 148-153, used the term realization even more broadly as a synonym for recognition.

\textsuperscript{51} "Most types of revenue are the joint result of many profit-directed activities of an enterprise and revenue is often described as being 'earned' gradually and continuously by the whole of enterprise activities. Earning in this sense is a technical term that refers to the activities that give rise to the revenue—purchasing, manufacturing, selling, rendering service, delivering goods, allowing other entities to use enterprise assets, the occurrence of an event specified in a contract, and so forth. All of the profit-directed activities of an enterprise that comprise the process by which revenue is earned may be called the earning process" (APB Statement 4, par. 149). Concepts Statement 3, paragraph 64, footnote 31, contains the same concept.

17. The renewal or establishment of an insurance policy in exchange for a claim to cash (premium receivable) triggers the realization characteristic of revenue recognition, therefore, the aging of the agents' balance or uncollected premium should commence on the effective date of the new or renewed policy. Endorsement premiums will trigger the realization characteristic on the effective date of the endorsement, while installment premiums will trigger the realization characteristic on the due date of the installment.

18. Although the realization characteristic of revenue recognition may have been triggered, the more important characteristic of earned may not have been, hence, the recording of an unearned premium.

19. FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises (FAS 60), also provides some indirect guidance. FAS 60, paragraph 13, requires revenue on short-duration contracts to be recognized over the period of the contract in proportion to the amount of insurance protection provided. The contract period starts with the policy effective date. Therefore, it is reasonable to begin aging from the policy effective date as this is the date when revenue recognition begins.

OTHER SOURCES OF INFORMATION:

20. The draft discussion materials from previous Property/Casualty codification projects proposed extensive modifications to the accounting for agents' balances and uncollected premiums. The following represents a summary of those modifications:
When the original or deposit premium are more than ninety days past due based on an aging referenced to effective date and therefore, not admitted, all premiums subsequently charged on the same policies or bonds are similarly not admitted, except that if the amount of such original or deposit premiums does not exceed 20% of the subsequently charged premiums in the same policies of bonds, such subsequently charged premiums, if otherwise not themselves more than ninety days overdue, shall be allowed as admitted assets.

21. The same basic concept was also discussed for endorsement premiums and installment premiums. In addition, this version discussed certain parameters where a greater than ninety day nonadmitted premium could be accounted for as an admitted asset. The modification was stated as follows:

A premium which has been determined to be not admitted may be treated as admitted if it has been collected within forty-five days of the date of determination and not more than ninety days had elapsed from the billing date to the date of determination and further, that not more than one hundred thirty-five days had elapsed from the effective date of the premium to the date of determination.

22. The draft discussion materials from previous Property/Casualty codification projects contradicted the Emerging Accounting Issues Working Group's consensus by proposing the following:

Original or deposit premiums
   Aging is always based on the effective date of the policy or bond regardless of whether the insurer is using a direct billing system or an account current system.

Endorsement
   Aging is always based on the effective dates of the endorsements.

Installments
   Aging is always based on the due date of the installment.

Statutory Issue Paper No. 7

Title:
Asset Valuation Reserve and Interest Maintenance Reserve

Status:
Finalized March 16, 1998

Type of Issue:
Life and Accident and Health Insurance Companies

SUMMARY OF ISSUE:

1. Current statutory accounting guidance requires life and accident and health insurance companies to recognize liabilities for an asset valuation reserve (AVR) and an interest maintenance reserve (IMR). There is no such requirement for property and casualty insurance companies. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR captures the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the liability released.

2. The purpose of this issue paper is to establish statutory accounting principles for AVR and IMR that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. The IMR and AVR shall be calculated and reported in accordance with Section 6, Interest Maintenance Reserve and Asset Valuation Reserve for Life Insurance Companies and Fraternal Benefit Societies of the Purposes and Procedures of the Securities Valuation Office of the NAIC (Purposes and Procedures Manual of the SVO).

DISCUSSION:

4. This issue paper adopts current statutory guidance for AVR and IMR for Life and Accident and Health insurance companies.

5. This issue paper rejects paragraph 28 (subtitled, Reporting of Realized Investment Gains and Losses of Investments) of FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments (FAS 97), as amended by FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities (FAS 115), for Life and Accident and Health Insurance Companies.

6. As stated in the draft discussion material from previous Life Codification projects, Chapter 16B, Asset Valuation Reserve, "The purpose of the AVR is to establish a provision for the volatile incidence of asset losses and recognize appropriately the long term return expectations for equity type investments. The AVR provides a mechanism to absorb unrealized and credit-related realized gains and losses on all
invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable.”

7. Chapter 16 A Interest Maintenance Reserve, in the draft discussion material from previous Life Codification projects states, “The purpose of the IMR is to protect surplus from investment transactions that are entered into as a reaction to interest rate movements. The IMR minimizes the effect that realized gains and losses attributable to interest rate movement have on current year operations by deferring and amortizing such capital gains and losses, net of tax, over the approximate remaining life of the investments sold.” These reserves serve to stabilize statutory surplus against fluctuations in the market value of securities and provide an extra layer of protection for policyholders. Furthermore, gains trading (i.e., selectively selling securities to include realized gains in earnings) opportunities are reduced by reporting an IMR. This is consistent with the Conservatism concept included in the Statement of Concepts, which states, “valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.”

8. The accounting policy to record AVR and IMR also is consistent with the “ultimate objective of solvency regulations” as stated in the Statement of Concepts. This states, “the ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide an adequate margin of safety.”

9. Because AVR and IMR only pertain to life and accident and health insurance companies, there is a difference in how Life and Accident and Health Insurance Companies and how Property and Casualty Insurance Companies account for investments. Property and Casualty Insurance Companies are required to record bonds and preferred stock with a NAIC designation of 3 through 6 at the lower of amortized cost or market. This provides a conservative measure of such securities in accordance with the conservatism concept in the Statement of Concepts.

Drafting Notes/Comments
- Realized gains and losses for insurers not maintaining an IMR are addressed in specific invested asset issue papers.
- This issue paper references the Purposes and Procedures Manual of the SVO. The guidance for AVR/IMR was subsequently moved to the Annual Statement Instructions for Life and Accident and Health Insurance Companies. SSAP No. 7 references the Annual Statement Instructions.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
10. Chapter 16, Asset Valuation Reserve and Interest Maintenance Reserve, in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies states the instructions for calculating the AVR and IMR are contained in the Purposes and Procedures of the Securities Valuation Office of the National Association of Insurance Commissioners.

11. Section 6. Interest Maintenance Reserve and Asset Valuation Reserve for Life Insurance Companies and Fraternal Benefit Societies of the Purposes and Procedures of the Securities Valuation Office of the NAIC contains the following excerpts (note that this is not quoted in its entirety):

This Section applies to all life insurance companies and fraternal benefit societies. The Section describes in general terms, principles of the calculation for Interest Maintenance Reserve (IMR) for realized gains and losses from fixed income investments and the Asset Valuation Reserve (AVR) on all invested assets held by a company. [Refer to the NAIC’s Life and Health Annual Statement Instructions published July 28, 1984 for specific accounting and reporting guidance.] The IMR is a
single component reserve. The AVR breaks down into two major components and each component has two subcomponents:

The Default Component--

(i) The Bond and Preferred Stock Subcomponent
(ii) The Mortgage Subcomponent

The Equity Component--

(i) The Common Stock Subcomponent
(ii) The Real Estate and Other Invested Assets Subcomponent

(A) Interest Maintenance Reserve (IMR). This reserve applies to realized capital gains and losses net of tax on short-term and long-term fixed income investments. These gains and losses are from the disposal of investments as reported in Schedule D, Part 4 for long-term bonds and preferred stock; Schedule DA, short-term bonds; Schedule DB, interest rate hedges; Schedule B, mortgage loans; or Schedule BA for other fixed income investments. The reserve captures the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses are to be amortized into investment income over the expected remaining life of the liability released.

The current year's IMR is equal to:

- The beginning balance
- plus (minus) the realized capital gains (losses) net of tax attributed to interest rate changes
- plus (minus) realized liability gains (losses) net of tax attributed to interest rate changes
- less an amortization amount

(a) Interest Related Realized Capital Gains and Losses:

The gains and losses are to be reported net of applicable capital gains taxes allocated in accordance with an insurers established policy.

A realized gain or loss on each debt security and mortgage backed security will be an interest related gain or loss if the debt security's beginning NAIC rating did not change by more than one classification at the end of the holding period. The holding period is defined as the period from the date of purchase to the date of sale. For debt securities acquired before January 1, 1991, the debt security's rating as of December 31, 1990 should be the beginning rating used for this purpose. A debt security's gain or loss should not be included in this reserve if the debt security rating was ever a “6” during the holding period.

Preferred stock that did not have an NAIC/SVO rating classification of “PSF-4”, “PSF-5”, “PSF-6” or “P-4”, “P-5” or “P-6” at any time during the holding period should be reported as interest related gains and (losses) in the Interest Maintenance Reserve if the stock’s beginning NAIC/SVO rating did not change by more than one classification at the end of the holding period.

For preferred stocks acquired before January 1, 1993, the holding period is assumed to have begun on December 31, 1992.

Losses recognized on loan-backed bonds and other structured securities that have a negative effective yield at the date of valuation should be treated as realized losses and included in the
reserve as if the security had been sold and the loss considered an interest rate loss. If the security is valued using the prospective adjustment methodology, a negative effective yield occurs when the net undiscounted sum of anticipated future cash flows of the security is less than the current book value of the security at the date of valuation. If the security is valued using the retrospective adjustment methodology, a negative effective yield occurs when the net undiscounted sum of actual and anticipated cash flows is less than the original cost of the investment.

Capital gains and losses net of capital gains tax on mortgage loans, where interest is not more than 90 days past due, not in process of foreclosure, not in course of voluntary conveyance, or have not had restructured terms over the prior two years will be classified as an interest rate gain or loss. Prepayment penalties recorded as capital gains on mortgage securities are also considered to be due to interest rate changes.

Capital gains or (losses) due to interest rate changes on fixed income investments with less than one year to expected maturity should be captured in the IMR. Gains or (losses), net of capital gains tax, in the remaining categories are amortized according to the Group Amortization Schedule Section 6(B)(j) or the seriatim method.

Realized gains and losses on fixed income investments recorded on Schedule BA should be classified as an interest gain or loss if they are in the nature of those defined for bonds, preferred stocks and mortgages.

Realized gains and losses, net of capital gains tax, on derivative investments arising out of transactions entered into solely for the purpose of altering the interest rate characteristics of the company's assets and/or liabilities should be allocated to the IMR and amortized into income over the remaining life of the assets or liabilities associated with the derivative instruments.

(b) Liability gains/(losses) Subject to IMR Amortization

1) Reinsurance -

The interest rate related gain or loss (net of taxes) associated with the sale, transfer or reinsurance of a block of liabilities must be credited or charged to the IMR and then amortized into income provided:

1. the portion of the block reinsured represents more than 5% of a company's general account liabilities (Page 3, Line 26),

2. the transaction is irrevocable and is to a non-affiliate and

3. the transaction was completed in the current year.

The amount of the gain or loss that is interest rate related and its IMR amortization should be determined using the following procedure for the portion of the block sold, transferred or reinsured.

1. Identify the IMR balance and future amortization arising from the past and present dispositions of the assets associated with the block of liabilities.

2. Identify the IMR balance and future amortization that would result if the remaining assets associated with the block of liabilities were to be sold.

3. Define the interest rate related gain or (loss) net of taxes to be the negative of the sum of the IMR balances determined in steps 1 and 2. The future amortization of the
gain or loss is the negative of the sum of the amortization determined in steps 1 and 2.

The associated assets are the assets allocable to the reinsured block of business for the purposes of investment income allocation. If the company has not been tracking the investment income of the block, it should retrospectively identify the assets using procedures consistent with its usual investment income allocation procedures. The associated assets are not necessarily the same as the assets transferred as part of the transaction.

2.) Market Value Adjustments

Material gains or losses resulting from market value adjustments on policies and contracts backed by assets that are valued at book, including the marginal tax impact, should be captured by the IMR and amortized in the same manner as capital gains and losses on fixed income investments. A gain or loss is considered material if it is in excess of both 0.01% of liabilities and $1,000,000. The amortization schedules should be determined in a manner consistent with the determination of associated market value adjustment.

(d) Amortization into income:

There are two acceptable methods for accumulating and calculating the amortization schedule:

1. Seriatim Method--The amount of each capital gain or (loss), net of capital gains tax, amortized in a given year using the seriatim method is the excess of the amount of income that would have been reported in that year, had the asset not been disposed of, over the amount of income that would have been reported had the asset been repurchased at its sale price. The capital gains tax associated with or allocated to each gain or (loss) should be amortized in proportion to the amortization of the gain or (loss).

   For loan-backed bonds and structured securities that are valued using currently anticipated prepayments use an amortization schedule developed using the anticipated future cash flows of the security sold consistent with the prepayment assumptions that would have been used to value the security had the security been purchased at its sale price.

   For the year ending December 31, 1994, only loan-backed and structured securities that meet the following definition are required to be valued using currently anticipated prepayments:

   Loan-backed and structured securities that have potential for loss of a significant portion of the original investment due to changes in interest rates or the prepayment rate of the underlying loans supporting the security. These securities should include, but are not limited to, interest-only structured securities and structured securities purchased at a significant premium over par value.

   The seriatim calculation on an asset by asset basis is the desired approach, but since a seriatim approach may impose an administrative burden on some companies, each company may use the method employed by that company to amortize interest related capital gains and losses among lines of business and policyholders in accordance with the investment income allocation process as approved by the state insurance department.

2. Grouped Method-- A company may use a standard “simplified method” by which the capital gains and (losses), net of capital gains tax, are grouped according to the number of calendar years to expected maturity.

The groupings are based on the years to expected maturity as of the date of sale.
The amortization schedule for the current year is the sum of the gains and losses by maturity groupings times the appropriate factor for the current and future years. The maturity groupings and factors are found in 6(B)(j).

The presence of sinking fund payments, amortization schedules, expected prepayments, and adjustable interest rates complicate the determination of the number of calendar years to expected maturity. The expected maturity date is:

For fixed income instruments with fixed contractual repayment dates and amounts (including bonds, preferred stock, callable or convertible bonds and preferreds), the expected maturity is defined as the contractual retirement date that produces the lowest amortization value for Annual Statement purposes (lowest internal rate of return or "yield to worst"). Potential retirement dates include all possible call dates, and the contractual maturity date. When the instrument's contractual terms include scheduled sinking fund payments of fixed amounts, an additional calculation of yield to average life should be included in the analysis where average life is defined as the date at which the instrument is 50% repaid. For puttable instruments, where the exercise option rests with the investor, expected maturity is the put or maturity date that produces the highest internal rate of return. For perpetual instruments, the expected maturity is 30 years from the current date.

However, where a callable bond purchased at a premium is called or sold after the expected maturity date, there should be no amortization of the call premium or interest rate related gain or loss and the gain or loss should be taken into income immediately. Similarly there should be no amortization of any interest rate related gain or loss arising if a convertible bond or preferred stock is disposed of after the expected maturity date.

For liability gains and losses included in the IMR, amortization should be determined in a manner consistent with the determination of associated market value adjustment or assets transferred.

"Calendar years to expected maturity" means the calendar year of expected maturity minus the calendar year of sale date.

For purposes of the grouped method, the following additional assumptions are applicable:

- For fixed income investments, other than residential mortgages and residential mortgage pass-throughs, without a maturity date or sinking fund schedule, a maturity date 30 years from the current year should be used.

- For loan-backed bonds and other structured securities that are valued using currently anticipated prepayments use the remaining weighted average life of principal and interest payments consistent with the prepayment assumptions that would have been used to value the security had the security been repurchased at its sale price.

- For the year ending December 31, 1994, only loan-backed and structured securities that meet the following definition are required to be valued using currently anticipated prepayments:
Loan-backed and structured securities that have potential for loss of a significant portion of the original investment due to changes in interest rates or the prepayment rate of the underlying loans supporting the security. These securities should include, but are not limited to, interest-only structured securities and structured securities purchased at a significant premium over pay value.

- For residential mortgages and residential mortgage pass-throughs other than Real Estate Mortgage Investment Conduits (REMICs), not valued using currently anticipated prepayments, the number of calendar years to expected maturity is defined to be one half of the number of calendar years to final maturity.

- For REMICs and other asset backed investments not valued using currently anticipated prepayments, purchased at the time of original issuance, the calendar year of expected maturity is the calendar year of issue plus the weighted average life (rounded to the nearest whole number) as stated in the Offering Circular, using the prepayment assumption stated in the Circular to be used for Federal Income Taxation.

- For REMICs and other asset-backed investments not valued using currently anticipated prepayments, purchased after the original issuance, it is permissible for the Company to re-compute the weighted average life of the investment based on the same prepayment assumptions used to compute the purchase price, provided that this re-computation is done in a consistent manner for all similar asset-backed investments.

(e) Separate Accounts

Interest Maintenance Reserve (IMR) requirements for investments reported in the separate accounts statement are applied on an account by account basis. If an IMR is required for a separate account, all of the investments in the separate account are subject to the requirement. If an IMR is not required for a separate account, none of the investments in that separate account are subject to the requirement.

An IMR is required for separate accounts valued at book, but is not required for separate accounts valued at market. For example, separate accounts for traditional variable annuities, or variable life insurance do not require an IMR because assets and liabilities are valued at market.

If an IMR is required for investments in the separate accounts statement, it is kept separate from the general accounts IMR and accounted for in the separate accounts statement. For further details see rules as explained in Sec (6) (A) (f).

(f) Negative IMR

A negative IMR balance may be recorded as a negative liability in either the general account or the separate accounts statements of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

The following information is presented to assist in determining the proper accounting:

<table>
<thead>
<tr>
<th>General Account</th>
<th>Separate Accounting</th>
<th>Net</th>
</tr>
</thead>
<tbody>
<tr>
<td>IMR Balance</td>
<td>IMR Balance</td>

</tr>
<tr>
<td>Positive</td>
<td>Negative</td>
<td>Negative (See rule d)</td>
</tr>
</tbody>
</table>
Negative  Positive  Positive (See rule e)
Negative  Positive  Negative (See rule f)

Rules:

a) If both balances are positive, then report each as a liability in its respective statement.

b) If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement. If there is any disallowed negative IMR balance in the general account statement, record the disallowed portion as a positive amount for Disallowed IMR in a write-in line for assets not admitted in Exhibit 14. If there is any disallowed negative IMR balance in the separate accounts statement, determine the change in the disallowed portion and make a direct charge or credit to the surplus account for the Change in Disallowed IMR.

c) If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the separate accounts statement.

d) If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the separate accounts statement, and follow the instructions in b) above for handling the disallowed portion of negative IMR balances in the separate accounts statement.

e) If the general account balances is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the general account statement.

f) If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the general account statement, and follow the instructions in b) above for handling the disallowed portion of negative IMR balances in the general account statement.

(B) Asset Valuation Reserve (AVR). This reserve shall apply to the specific risk characteristics of all the invested asset categories excluding cash, policy loans, premium notes, collateral loans and income receivables. The specific assets to be included in each subcomponent are:

The Default Component

The Bond and Preferred Stock Component shall include all fixed income investments that are corporate or governmental unit obligations, excepting those listed in subsection (g) as exempt from the AVR reserve, preferred stock and loan backed securities as reported in Schedule D, Part 1 and Part 2–Section 1 and Schedule DA, and counterparty exposure arising from derivative transactions as reported in Schedule DB, Part E, Section 1.

The Mortgage Subcomponent shall include all farm, commercial, residential mortgages as reported in Schedule B and Schedule DA.

The Equity Component

The Common Stock Subcomponent shall include all affiliated and unaffiliated common stock investments as reported in Schedule D, Part 2–Section 2.
The Real Estate and Other Invested Asset Subcomponent shall include all real estate reported on Schedule A and all Other Invested Assets as reported on Schedule BA and DA.

(a) Calculation of the AVR:

The current year's AVR by subcomponent is equal to:

- The beginning balance
- plus (minus) the realized capital gains (losses) net of tax as allocated by the company on assets corresponding to the subcomponent
- plus (minus) unrealized capital gains (losses) on assets corresponding to the subcomponent
- plus (minus) transfers between components
- plus an annual contribution
- plus any voluntary contribution
- plus (minus) an adjustment up to zero or down to maximum.

(b) Realized Capital Gains and Losses:

Report all realized credit-related (default) and equity capital gains and (losses), net of capital gains tax applicable to the assets in each component and subcomponent including those realized capital gains and (losses) that are incurred on Separate Accounts assets for which AVR treatment is required. Exclude all interest rate related capital gains and (losses) from the AVR.

A realized gain or loss on a debt security will be a credit related gain or loss if the debt security's beginning NAIC/SVO rating changed by more than one classification at the end of the holding period. The holding period is defined as the period from the date of purchase to the date of sale. For debt securities acquired before January 1, 1991 the debt securities rating as of December 31, 1990 should be the beginning rating used for this purpose. A debt security gain or loss should always be included in this reserve if the bond rating was ever a "6" during the holding period.

Preferred stock that had an NAIC/SVO rating classification of "PSF-4", "PSF-5", "PSF-6", "P-4", "P-5" or "P-6" at any time during the holding period shall be reported as credit related gains and (losses) in the Asset Valuation Reserve.

For preferred stocks acquired before January 1, 1993 the holding period is presumed to have begun on December 31, 1992.

In addition, all gains or losses, net of capital gains taxes, on mortgage loans, where interest is more than 90 days past due, in the process of foreclosure in course of voluntary conveyance, or have had restructured terms over the prior two years, would be classified as credit related gains or losses. Permanent impairment writedowns are also treated as credit losses.

Realized gains or losses net of capital gains tax on portfolio or general hedging instruments should be included with the hedged assets. Gains or losses net of capital gains tax on hedges used as specific hedges should be included only if the specific hedged asset is sold or disposed.

Realized gains or losses on derivative instruments not accounted for as specific (as opposed to general) hedge transactions should be allocated to the component and subcomponent of the assets associated with the derivative instruments used in the general hedge.

Realized gains or losses, net of capital gains resulting from the sale of U.S. Government Securities and the direct or guaranteed securities of agencies which are backed by the full faith and credit of the U.S. Government are exempt from the AVR. This category is detailed in Section 6(B)(g)(i).
The gains or (losses) are to be reported net of applicable capital gains taxes as allocated by the company.

(c) Unrealized Capital Gains and Losses:

Unrealized gains and losses should be summarized by subcomponent asset type and included in the reserve computation including those unrealized capital gains and (losses) that are incurred on Separate Account assets for which AVR treatment is required. The equity method of accounting is allowed in accounting for the operating results of subsidiary, controlled or affiliated companies. If the equity accounting method is used, the amount of the undistributed income or loss reported in Exhibit 2 of the Annual Statement less the amount of any dividends received is to be included as an unrealized capital gain or loss when computing the Common Stock Subcomponent. Unrealized gains and (losses) for Affiliated Life Insurance Companies which are maintaining their own AVR are excluded since the maximum reserve factor for such companies is 0%.

Unrealized gains or losses on derivative instruments not accounted for as hedging transactions should be allocated to the component and subcomponent of the assets associated with the derivative instruments.

(d) Transfers Between Components:

If the sum of a subcomponent's beginning balance, realized gains and losses and unrealized gains and losses is greater than the ending maximum of the subcomponent, and the balance of its sister subcomponent is below its maximum reserve, the excess must be transferred to the other subcomponent of the Default or Equity components up to that subcomponent's maximum.

If after the above transfers, the Equity or Default component is greater than total maximum for the component, the excess may be transferred to the other component or may be released to surplus.

If the balance before transfers of any of the four sub-components is negative, and the balance before transfers of its "sister" subcomponent within the same component is positive, the negative amount should be transferred to the "sister" sub-component to the extent that the transfer does not reduce the positive balance before transfers of the "sister" sub-component to less than 50% of its balance prior to the transfer.

No other transfers may be made without Commissioner approval.

(e) Annual Contribution:

The formula for the annual contribution to a subcomponent is as follows:

\[
\text{The amortization rate times the subcomponent maximum amount minus the accumulated balance. (Accumulated balance is shown on Page 49, Line 6 of the Annual Statement).}
\]

(f) Contribution Rate:

The contribution rate is 20% per year.

(h) Voluntary Contribution to the Reserves:
Companies may make voluntary contributions to the subcomponents. Voluntary contributions will become a permanent part of the AVR once they have been reported and may not be removed in subsequent years.

12. Most state regulations refer to the literature of the NAIC for guidance on the calculation of AVR and IMR. An example is the Texas Administration Code, Title 28 - Insurance, Chapter 7, Corporate and Finance, which states:

(4) Asset valuation reserve (AVR) -- A reserve applied to the specific risk characteristics of all the invested asset categories except cash, policy loans, premium notes, collateral loans, and income receivables. Asset valuation reserves shall be calculated as prescribed by the NAIC and adopted from time to time by the State Board of Insurance under the Texas Administrative Code, Title 28, Chapter 7.

(12) Interest maintenance reserve (IMR) -- A reserve applied to realized capital gains and losses on short-term and long-term fixed investments. These gains and losses are from the disposal of investments as reported in Schedule D, part 1 -- Bonds, or Schedule B -- Mortgage Loans of the current annual statement. The reserve captures the realized capital gains and losses resulting from changes in the general level of interest rates as prescribed by the NAIC and adopted from time to time by the State Board of Insurance under the Texas Administrative Code, Title 28, Chapter 7.

Generally Accepted Accounting Principles

13. AVR and IMR are not addressed in current GAAP literature.

14. Paragraph 28 of FAS 97, as amended by FAS 115, addresses the GAAP accounting for realized gains and losses. It states:

Reporting of Realized Investment Gains and Losses of Investments

28. Statement 60 required that insurance enterprises report realized gains and losses in the statement of earnings below operating earnings and net of applicable income taxes. This Statement precludes that practice. Realized gains and losses shall be reported in the statement of earnings as a component of other income, on a pretax basis, and shall not be deferred to future periods either directly or indirectly. The first sentence of paragraph 50 of Statement 60 is superseded by the following: Realized gains and losses on all investments (except investments that are classified as trading securities and those that are accounted for as hedges as described in FASB Statements No. 52, Foreign Currency Translation, and No. 80, Accounting for Futures Contracts) shall be reported in the statement of earnings as a component of other income, on a pretax basis. Realized gains and losses shall be presented as a separate item in the statement of earnings or disclosed in the notes to the financial statements. Realized gains and losses shall not be deferred, either directly or indirectly.

OTHER SOURCES OF INFORMATION:

15. The draft discussion material from previous Life Codification projects contains the following excerpts:

Chapter 16A - Interest Maintenance Reserve

All U.S. life insurance companies and fraternal benefit societies are required to establish an Interest Maintenance Reserve (IMR) for realized gains and losses resulting from changes in the overall level of interest rates on fixed income investments. The IMR is calculated in accordance
with instructions promulgated by the Valuation of Securities (EX4) Task Force of the National
Association of Insurance Commissioners and contained in the Life Accident and Health Annual
Statement Instructions and the Valuation of Securities manual. Because the instructions for the
calculation of the IMR are periodically revised, the current publications should be consulted.

The purpose of the IMR is to protect surplus from investment transactions that are entered into as
a reaction to interest rate movements. The IMR minimizes the effect that realized capital gains
and losses attributable to interest rate movement have on current year operations by deferring
and amortizing such capital gains and losses, net of tax, over the approximate remaining life of
the investments sold. The IMR applies to realized capital gains and losses, net of tax, on short-
term and long-term fixed income securities, including bonds, notes, preferred stock and
mortgages.

Chapter 16B - Asset Valuation Reserve

All U.S. life insurance companies and fraternal benefit societies must include as a liability in their
statutory financial statement an Asset Valuation Reserve (AVR) on fixed income and equity
investments. The AVR is calculated in accordance with instructions promulgated by the Valuation
of Securities (EX4) Task Force of the National Association of Insurance Commissioners and
contained in the Life, Accident and Health Annual Statement Instructions and the Valuation of
Securities manual. Because the instructions for the calculation of the AVR are periodically revised,
the current publications should be consulted.

The purpose of the AVR is to establish a provision for the volatile incidence of asset losses and
recognize appropriately the long term return expectations for equity type investments. The AVR
provides a mechanism to absorb unrealized and credit-related realized gains and losses on all
invested asset categories excluding cash, policy loans, premium notes, collateral notes and
income receivable.

The AVR contains two components, default and equity, each designed to address specific asset
risk areas. The default component is further divided into the bond and preferred stock
subcomponent and the mortgage subcomponent; the equity component is comprised of the
common stock subcomponent and the real estate and other invested asset subcomponent.
Increases or decreases to the reserve are charged or credited directly to surplus. The AVR is
limited to maximums by subcomponent, and no subcomponent of the AVR may be less than zero.
Transfers between subcomponents or between components may be required or may be allowed
without commissioner approval when negative or certain maximum subcomponent balances
occur.

Statutory Issue Paper No. 8

Title:
Accounting for Pensions

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. The current Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies do not address employers' accounting for pension plans. However, a position paper was prepared by the Study Group of EX4 on Accounting for Insurance Company-Funded Pensions and was adopted by the NAIC. The adopted position does not mandate a specific accounting method but calls for expanded disclosures with regard to pension accounting and is documented in the September 15, 1987 Accounting Practices and Procedures (EX4) Task Force minutes. Under this existing guidance, reporting entities have the option of continuing to recognize pension costs on the pay-as-you-go (Employee Retirement Income Security Act funding) method or adopting the provisions of FASB Statement No. 87, Employers' Accounting for Pensions (FAS 87), which requires recognition of pension costs over the period a participant renders service to the reporting entity and recognition of a liability for unfunded costs.

2. FAS 87 requires recognition of pension costs over the period a participant renders service to the reporting entity and recognition of a liability for unfunded costs. It also permits the recognition of an asset when the pension plan is over funded (i.e., plan assets exceed plan liabilities). FASB Statement No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits (FAS 88), requires recognition of previously unrecognized amounts when a reporting entity settles or curtails a defined benefit plan or provides benefits in connection with the termination of an employee.

3. The purpose of this issue paper is to establish statutory accounting principles for an employer's pension obligations that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

Defined Benefit Plans

4. A defined benefit plan defines the amount of the pension benefit that will be provided to the plan participant at retirement or termination. For such benefit plans, reporting entities shall adopt FAS 87 with a modification to exclude non-vested employees. Therefore, the cost related to services rendered prior to becoming eligible and vested in the plan are recognized as a component of the net periodic pension cost in the period the employee becomes vested. Any intangible asset or prepaid expense resulting from adoption of the provisions of this issue paper shall be considered a nonadmitted asset, as such an asset cannot be readily converted to cash to satisfy policyholder obligations. This is consistent with the
definition of assets and nonadmitted assets set forth in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets.

5. If a reporting entity settles or curtails a defined benefit plan, the reporting entity shall immediately recognize all previously unrecognized amounts as discussed below. A settlement is a transaction which is irrevocable and releases the employer from responsibility for the pension obligation by eliminating the risks relative to the obligation and the assets associated with the plan (e.g., making lump-sum cash payments to plan participants in exchange for their rights to receive specified pension benefits or purchasing nonparticipating annuity contracts to cover vested benefits). If a settlement occurs and the net result is a loss, such loss is recognized at the time of the settlement. If the net result is a gain, such gain is not recognized until the proceeds are received by the reporting entity. A curtailment is an event which significantly alters the make up of the pension plan (e.g., a reduction in the years of service required or the employees covered). If a curtailment occurs, there are generally two components to any gain or loss. Any unrecognized prior service cost shall be recognized as a loss. An increase or decrease in pension benefit obligations due to the curtailment will also result in a gain or loss, and is combined with the prior service cost loss. If the net result of the curtailment is a loss, such loss shall be recognized when it is probable that the curtailment will occur and that the effects can be reasonably estimated. If the net result is a gain, such gain shall not be recognized in earnings until the employees terminate or the plan suspension or amendment is adopted and the proceeds are received by the reporting entity. When such gains are recognized, any excess tax surcharges shall also be recognized.

Defined Contribution Plans
6. A defined contribution plan defines the amount of the employer's contributions to the plan and its allocation to plan participants. The pension benefit provided to the plan participant at retirement or termination depends on the amount of employer and employee contributions, earnings on plan investments and, in some plans, other participant forfeitures.

7. For defined contribution plans, the reporting entity shall expense contributions required by the plan over the period in which the employee vests in those contributions. Contributions to plan participants' accounts made prior to vesting shall be treated as prepaid expenses, and shall be nonadmitted. Contributions required after participants terminate or retire shall be accrued and an expense shall be recorded over the working lives of the participants beginning at the date the participant initially vests in plan contributions.

8. Certain defined contribution plans may define the employer's contribution as a percentage of the plan participants’ individual compensation rather than as a specific dollar amount which is allocated among the plan participants. If an employer's contributions to a defined contribution plan are in excess of those required under the plan and required to be allocated to individual participants, such amounts are recorded as a prepaid expense and nonadmitted under statutory accounting principles.

Disclosures
9. The disclosures required by paragraph 54 of FAS 87 shall be included in the notes to the statutory financial statements considering the modification in this issue paper to include only vested employees. Paragraph 54 of FAS 87 is included in the Relevant GAAP Guidance section of this issue paper.

10. The disclosures required by paragraph 17 of FAS 88 shall be made when an employer recognizes a gain or loss related to a settlement or curtailment of a defined benefit plan or when providing
termination benefits. Paragraph 17 of FAS 88 is included in the Relevant GAAP Guidance section of this issue paper.

**Transition**

11. At the effective date of Codification, the transition obligation or asset shall be determined as the difference between the vested projected benefit obligation and the fair value of plan assets. If prior to the effective date of Codification, the reporting entity has adopted FAS 87 for statutory accounting purposes, the transition obligation or asset calculated above shall be compared to those amounts previously recorded under FAS 87. The difference between these amounts represents an incremental asset or liability. If the reporting entity has not previously adopted FAS 87 for statutory accounting purposes, the entire transition asset or obligation represents the incremental asset or liability.

12. At the effective date of Codification, if the reporting entity calculates an incremental liability, this liability shall be recognized according to one of the two following methods:

   a. The reporting entity may elect to record the entire incremental liability as a direct charge to surplus;

   b. Alternatively, the reporting entity may elect to amortize the incremental liability as a component of net periodic pension cost over a period not to exceed 20 years.

13. At the effective date of Codification, if the reporting entity calculates an incremental asset, this asset shall be recognized according to one of the two following methods:

   a. The reporting entity may elect to record the entire incremental asset as a direct credit to surplus;

   b. Alternatively, the reporting entity may elect to accrue the incremental asset as a component of net periodic pension cost in an amount each period such that total net periodic pension cost may be reduced to an amount not less than zero (i.e., the accrual of the incremental asset may be used to offset current period net periodic pension cost).

An incremental asset resulting from a transition obligation that is less than an amount previously recorded under FAS 87 should first reduce the recorded liability. Any remaining incremental asset shall be recorded as nonadmitted.

**Consolidated/Holding Company Plans**

14. The employees of many reporting entities are members of a plan sponsored by a parent company or holding company. A reporting entity who participates in these plans and is not directly liable for obligations under the plan shall recognize pension expense equal to its allocation from the holding company or parent company of the required contribution to the plan for the period. A liability shall be established for any such contributions due and unpaid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for obligations under the plan, then the requirements outlined above in paragraphs 4 to 13 of this issue paper shall be applied.
DISCUSSION:

15. The conclusions in paragraphs 4 to 13 above adopt FAS 87 and FAS 88, with the following modifications:
   
a. Calculation of the pension obligation shall exclude non-vested employees. Partially vested employees are included only to the extent of their vested amounts.
   
b. Any asset which results from an excess of the fair value of plan assets over the pension obligation shall be recorded as a nonadmitted asset.
   
c. At the date of adoption of this accounting principle, the pension obligation or asset not previously recognized related to vested employees may be recorded immediately or may be amortized over future periods.
   
d. A net gain (net of excess tax surcharge) resulting from the settlement or curtailment of a pension plan is not recognized until the proceeds are received by the reporting entity.

This is consistent with the definition of liabilities as defined in Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets.

16. This issue paper also adopts FASB Emerging Issues Task Force No. 88-1, Determination of Vested Benefit Obligation for a Defined Benefit Pension Plan, FASB Emerging Issues Task Force No. 90-3, Accounting for Employers' Obligations for Future Contributions to a Multiemployer Pension Plan, FASB Emerging Issues Task Force No. 91-7, Accounting for Pension Benefits Paid by Employers after Insurance Companies Fail to Provide Annuity Benefits, and FASB Emerging Issues Task Force No 96-5, Recognition of Liabilities for Contractual Termination Benefits or Changing Benefit Plan Assumptions in Anticipation of a Business Combination.

17. Accounting for any intangible asset or prepaid expense resulting from application of the provisions of this issue paper as a nonadmitted asset is consistent with the recognition concept in the Statement of Concepts which states that:

   The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

18. The transition rules have been modified from FAS 87. For an incremental asset or liability which is not recorded immediately upon adoption of the above provisions, an employer is permitted to amortize the incremental asset or liability as a component of net periodic pension cost over future periods in accordance with paragraphs 12 and 13. FAS 87 requires that any transition amount be amortized on a straight-line basis over the average remaining service period of employees expected to receive benefits (except for employers with all or nearly all inactive employees or those with an average remaining service period of less than 15 years).

19. The guidance as discussed in paragraph 1 above, requires expanded disclosures rather than mandating a specific accounting method. However, this adopted position is inconsistent with the concept
of recognition outlined in the Statutory Statement of Concepts which states: “Liabilities require recognition as they are incurred.” Therefore, adoption of FAS 87, with modifications, will be required for statutory accounting and reporting.

Drafting Notes/Comments
- Postemployment benefits are addressed in Issue Paper No. 13 - Employers' Accounting for Postemployment Benefits.
- Postretirement benefits other than pensions are addressed in Issue Paper No. 14 - Employers' Accounting for Postretirement Benefits Other Than Pensions.
- Other deferred compensation plans, such as Rabbi Trusts and ESOPs, are addressed in a separate issue paper.
- The tax attributes associated with the accounting principles discussed in this paper (i.e., deferred income taxes) are not currently recognized in existing statutory accounting guidance. Accounting principles for federal income taxes are addressed in a separate issue paper.
- Holding company obligations are addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
20. The position adopted by the Accounting Practices and Procedures (EX4) Task Force is summarized in the minutes from its September 15, 1987 meeting. Key points are paraphrased below:

For multi-company plans sponsored by a parent company, the pension expenses would be the amount contributed by the company to the parent company related to the pension plan. This is comparable to the treatment of multi-employer and similar plans under FAS 87.

For plans sponsored by the reporting company, pension expense is the amount to be funded for the period. If the company chooses to adopt FAS 87 and 88, any resulting intangible or prepaid asset would be considered nonadmitted unless approved by the insurer’s state of domicile as appropriate. For self-funded plans, i.e. where the company reflects the assets of the pension plan among its own assets, the amount of accrued pension costs and its location in the balance sheet should be disclosed. Accrued pension costs related to the pension plan would be determined in accordance with accepted actuarial methods.

For companies which report on a GAAP basis, but choose to retain statutory accounting methods for state regulatory reporting, additional footnote disclosures supplementing those outlined below are encouraged but not required.

21. The following observations, among others, were made by the Study Group of EX4:

One of the principal reasons that FAS 87 and 88 were adopted under GAAP was to improve income statement comparability. This comparability has a stronger emphasis on a GAAP income statement than is typical for statutory reporting which is balance sheet oriented.

The liquidation priority of a pension plan liability appears to be behind policyholder liabilities. It appears that unless there is a perfected interest by the pension plan participants or the Pension Benefit Guaranty Corp., that the pension plan stands as a general creditor behind the policyholder. The FASB is less interested in this aspect since the thrust of its position was one of economic over legal substance. However, statutory accounting is on a modified going-concern basis. In addition, the interest of the policyholder is of utmost importance and is primarily responsible for the rationale used in statutory reporting. Nevertheless, the responsibility of the
insurance company to live up to its pension plan obligations on an ongoing basis must be recognized.

If FAS 87 were adopted for SAP, certain issues would need to be addressed such as whether the assets (prepaid pension cost and an intangible asset) and liabilities (accrued pension cost) that may arise should be permitted or required to be reported in the financial statements. It would appear that the prepaid and intangible assets would be considered nonadmitted assets since they represent assets, potential or otherwise, not available to satisfy policyholder obligations. Furthermore, companies with unfunded pension plans could be impaired or rendered insolvent by implementing GAAP basis accounting for pensions.

22. The NAIC Annual Statement Instructions for Life and Accident and Health and for Property and Casualty Insurance Companies specify the required disclosures developed by the Study Group of EX4 and adopted by EX4 which include:

   a. a description of the plan's funding policy,
   b. the method of determination and the amount of pension expense,
   c. the amount of the accumulated benefit obligation, the amount of vested benefits and the fair value of the plan assets valued as of the most recent actuarial valuation date,
   d. any funding waiver requested or obtained from the IRS,
   e. for an unfunded plan, the method of funding the obligation and how the deficiency will be met,
   f. significant matters affecting the year-to-year comparability of the pension information and
   g. the location(s) and amount(s) of liabilities for benefits.

Illustrations of sample disclosures are also provided in the Annual Statement Instructions.

23. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 17, Other Liabilities, contains the following with respect to pension plans:

   **Liabilities for Benefits for Employees and Agents**

A company may be required or desire to establish a liability for certain benefits to employees and agents which are not provided for in other accounts. Examples include: 1. It may be desirable to hold the liability for a nonqualified pension plan in this category in order to assist the tax department in adjusting their tax deductions.

**Generally Accepted Accounting Principles**

24. FAS 87 focuses primarily on single-employer defined benefit plans and requires:

   a. a standardized method for measuring net periodic pension cost (unit credit actuarial method or projected unit credit actuarial method depending on the type of plan),
   b. immediate recognition of a liability (the minimum liability) when the accumulated benefit obligation exceeds the fair value of plan assets with delayed recognition of the offsetting amount as an increase in net periodic pension cost and
   c. various disclosures about the plan including the components of net pension cost and of the projected benefit obligation in the financial statements. (Paraphrased from the “Fundamentals of Pension Accounting” section of the “Summary” section immediately preceding the FAS 87 statement.)
25. The following is a brief paraphrased summary of the key provisions under FAS 87:

FAS 87 requires the recognition of a liability (unfunded accrued pension cost) if net periodic pension cost as determined under FAS 87 exceeds amounts the employer has contributed to the plan. An asset (prepaid pension cost) is recognized if net periodic pension cost is less than amounts the employer has contributed to the plan.

For defined benefit pension plans, an additional pension liability (referred to as the minimum liability) must be recognized when the accumulated benefit obligation (defined in FAS 87) for plan participants exceeds the fair value of the plan assets plus or minus any accrued or prepaid pension expense. If an additional liability is recognized, an equal amount shall be recognized as an intangible asset, provided that the asset recognized shall not exceed the amount of unrecognized prior service cost (defined in FAS 87). If an additional liability required to be recognized exceeds unrecognized prior service cost, the excess (which would represent a net loss not yet recognized as net periodic pension cost) is reported as a reduction in equity, net of any tax benefits that result from considering such losses as temporary differences for purposes of applying the provisions of FASB Statement No. 109, Accounting for Income Taxes.

The intangible asset representing the unrecognized prior service cost (which at the date of initial adoption would be the unrecognized net obligation) is amortized as a component of the net periodic pension cost on a straight-line basis over the average remaining service period of employees expected to receive benefits under the plan, except that, (a) if the average remaining service period is less than 15 years, the employer may elect to use a 15-year period, and (b) if all or almost all of a plan’s participants are inactive, the employer shall use the inactive participants’ average remaining life expectancy period.

26. FAS 87 requires the following disclosures:

54. An employer sponsoring a defined benefit pension plan shall disclose the following:

   a. A description of the plan including employee groups covered, type of benefit formula, funding policy, types of assets held and significant nonbenefit liabilities, if any, and the nature and effect of significant matters affecting comparability of information for all periods presented

   b. The amount of net periodic pension cost for the period showing separately the service cost component, the interest cost component, the actual return on assets for the period, and the net total of other components 13

   13The net total of other components is the net effect during the period of certain delayed recognition provisions of this Statement. That net total includes:

   a. The net asset gain or loss during the period deferred for later recognition (in effect, an offset or a supplement to the actual return on assets)

   b. Amortization of the net gain or loss from earlier periods

   c. Amortization of unrecognized prior service cost

   d. Amortization of the unrecognized net obligation or net asset existing at the date of initial application of this Statement.

   c. A schedule reconciling the funded status of the plan with amounts reported in the employer’s statement of financial position, showing separately:
(1) The fair value of plan assets

(2) The projected benefit obligation identifying the accumulated benefit obligation and the vested benefit obligation

(3) The amount of unrecognized prior service cost

(4) The amount of unrecognized net gain or loss (including asset gains and losses not yet reflected in market-related value)

(5) The amount of any remaining unrecognized net obligation or net asset existing at the date of initial application of this Statement

(6) The amount of any additional liability recognized pursuant to paragraph 36

(7) The amount of net pension asset or liability recognized in the statement of financial position pursuant to paragraphs 35 and 36 (which is the net result of combining the preceding six items)

d. The weighted-average assumed discount rate and rate of compensation increase (if applicable) used to measure the projected benefit obligation and the weighted-average expected long-term rate of return on plan assets

e. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, and the approximate amount of annual benefits of employees and retirees covered by annuity contracts issued by the employer and related parties. Also, if applicable, the alternative amortization method used pursuant to paragraphs 26 and 33, and the existence and nature of the commitment discussed in paragraph 41.

27. FAS 88 prescribes a method for determining the amount to be recognized in earnings when a pension obligation is settled, a plan is curtailed or benefits are provided to employees in connection with their termination of employment. A settlement is a transaction which is irrevocable and releases the employer from responsibility for the pension obligation by eliminating the risks relative to the obligation and the assets associated with the plan. A curtailment is an event which significantly alters the makeup of the pension plan (e.g., a reduction in the years of service required or the employees covered).

28. FAS 88 requires recognition of certain previously unrecognized amounts when certain transactions or events occur, the source and timing of the amount to be recognized in earnings will vary with the nature of the transaction. Generally, if a settlement occurs, a gain or loss is recognized related to previously unrecognized gains or losses from either changes in assumptions or actual results which were different from that assumed. In addition, any unamortized net asset from the implementation of FAS 88 is recognized as a gain. If a curtailment occurs, there are generally two components to any gain or loss. Any unrecognized prior service cost is recognized as a loss. An increase or decrease in pension benefit obligations due to the curtailment will also result in a gain or a loss, and is combined with the prior service cost loss. If the net result of the curtailment is a loss, it is recognized when it is probable that the curtailment will occur and that the effects are reasonably estimable. If the net result is a gain, it is not recognized in earnings until the employees terminate or the plan suspension or amendment is adopted.

29. FAS 88 requires the following disclosures:

17. Disclosure and Presentation
An employer that recognizes a gain or loss under the provisions of this Statement, whether directly related to the disposal of a segment of a business or otherwise, shall disclose the following:

a. A description of the nature of the event(s)

b. The amount of gain or loss recognized.

OTHER SOURCES OF INFORMATION:

30. The NAIC Technical Resource Group Proposed Draft Life Codification, Chapter 23, General Expenses and Taxes, Licenses and Fees, contains the following language:

Pension Costs

Many insurance companies offer their employees pension plans as part of the compensation package for service rendered. Pension plans include defined contribution or defined benefit pension plans. The accounting for each of these types differs.

For defined benefit pension plans, an insurance company is responsible for providing a specified benefit to the plan participants at retirement. The insurance company has the option of recognizing the benefit costs by adoption Financial Accounting Standards Board Statement of Financial Accounting Standard (FAS) No. 87, "Employers' Accounting for Pensions," or based upon funding required under the Employee Retirement Income Security Act (ERISA).

If FAS 87 is adopted, pension service costs must be recognized over the period a participant renders service to the company for qualified and non-qualified (e.g. Top Hat Plans) defined benefit pension plans.

If the ERISA funding method is elected, an insurance company will record the pension service costs for defined benefit pension plans based upon requirements of ERISA for qualified pension plans. Pension service costs will then be recorded in conjunction with funding required by ERISA for such qualified plans on a pay-as-you-go basis. When ERISA dictates additional funding is required, the employer will recognize this funding as a corresponding expense.

If the ERISA funding method is elected for qualified defined benefit pension plans, pension service costs associated with any non-qualified plans must be accrued as earned. Those service costs must be accrued over the working lives of the participants covered under the non-qualified plan.

For defined contribution benefit plans, the insurance company is responsible for making specific contributions to a participant's pension plan account. The insurance company must accrue the contributions required by the plan in the period in which those contributions are earned. Contributions to plan participants' accounts required during the participants' working lives must be expensed over that period. The contributions required after participants terminate or retire require an expense be accrued and a liability established over the working lives of the participants.

If a company makes contributions to the defined contribution plan in excess of those allocated to individual participants, the excess is recorded as a prepaid asset.

Settlements and Curtailments of Pension Plans
Companies that offer their employees defined benefit pension plans periodically settle or curtail the plan.

A settlement is a transaction which is irrevocable, releases the employer from responsibility for the pension, and eliminates the risks relative to the obligation and the assets associated with the plan. For example, lump-sum cash payout to the employees in lieu of their pension rights.

A curtailment is an event which significantly alters the make up of the pension plan. For example, the years of service required is reduced or the employees covered under the plan is decreased.

Settlements and curtailments of pension plans should be accounted for using generally accepted accounting principles.

31. The chapter on Non-Claim Operating Expenses included in the draft discussion material from previous Property/Casualty codification projects contains the following language which contradicts some of the Life Codification language:

Statement of the Financial Accounting Standards Board ("FASB") No. 87, "Employers' Accounting for Pensions" was issued in December 1985 and superseded Accounting Principles Board ("APB") Opinion 8 "Accounting for the Cost of Pension Plans". FASB 87 should be followed in accounting for pension plans. FASB 87 requires that pension plans be accounted for on the accrual basis of accounting and any difference between "Net Period Pension Cost" incurred and the amount actually funded is accrued. GAAP permits the recognition of an asset for the excess of any pension funds over the plan's liabilities. SAP, however, does not permit the recognition of any prepaid pension expense. "Net Periodic Pension Cost" includes the following components:

1. Current service cost. (The present value of future benefits earned for the employee's current service.)

2. Amortization of unrecognized prior service or retroactive benefit costs over the future service periods of those employees active at the inception or plan amendment date. (The present value of future benefits credited for an employee's prior service at the inception or amendment of the plan should be ratably accrued over his remaining service life.)

3. "Gains and losses are changes in the amount of either the projected benefit obligation or plan assets resulting from experience different from that assumed and changes in assumptions." "Because gains and losses may reflect refinements in estimates as well as real changes in economic values and because some gains in one period may be offset by losses in another or vice versa, ..."such gains and losses are not recognized as part of "net pension cost in the period in which they arise". FASB 87 sets forth the minimum and alternative methods of amortizing net gains and losses.

FASB 88 "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits" should be followed when such plans are terminated.

Title:
Subsequent Events

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. The Accounting Practices and Procedures Manuals for Life and Accident and Health Insurance Companies and for Property and Casualty Insurance Companies do not address the accounting treatment for events occurring subsequent to the period covered by statutory financial statements but prior to their issuance. Although general guidance for disclosing material subsequent events is found in the NAIC Annual Statement Instructions (Annual Statement Instructions) and guidance for identifying and disclosing material subsequent events is found in the NAIC Financial Condition Examiners Handbook, specific criteria as to whether a material subsequent event should be recorded in the current financial statements or simply disclosed in the notes to the financial statements is not defined. The purpose of this issue paper is to define “subsequent events” for statutory accounting purposes and to establish the criteria for recording such events in the financial statements and/or disclosing them in the notes to the financial statements.

SUMMARY CONCLUSION:

2. For purposes of statutory accounting, “subsequent events” shall be defined as events or transactions that occur subsequent to the balance sheet date, but prior to the issuance of the statutory financial statements. For purposes of this paper, the issuance of the statutory financial statements includes not only the submission of the Quarterly and Annual Statement but also the issuance of the audit opinion by the reporting entity’s certified public accountant.

3. Material subsequent events shall be considered either:

a. Type I. Events that provide additional evidence with respect to conditions that existed at the date of the balance sheet and affect the estimates inherent in the process of preparing financial statements.

b. Type II. Events that provide evidence with respect to conditions that did not exist at the balance sheet date but arose subsequent to that date.

4. All information that becomes available prior to the issuance of the financial statements relating to a material Type I subsequent event shall be used by management to determine a related accounting estimate (see Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets and Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets). Any changes in estimates resulting from the use of such evidence shall be recorded in the financial statements unless specifically prohibited (e.g., subsequent collection of agents balances over 90 days due when determining nonadmitted agents balances as prohibited by Issue Paper No. 6 - Amounts Due from Agents and Brokers). For material Type I subsequent events, the nature and the amount of the adjustment shall be
disclosed in the notes to the financial statements only if necessary to keep the financial statements from being misleading.

5. Information that becomes available prior to the issuance of the financial statements relating to a material Type II subsequent event shall not be recorded in the financial statements, but shall be disclosed in the notes to the financial statements. If an event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclosure of supplemental pro forma financial data shall be made including the impact on net income, surplus, total assets and total liabilities giving effect to the event as if it had occurred on the date of the balance sheet.

6. The conclusions in this issue paper, including the disclosures in paragraph 5, shall also apply to quarterly statement filings.

DISCUSSION:

7. The above conclusion expands and clarifies the guidance provided in the NAIC Financial Condition Examiners Handbook and the Annual Statement Instructions by requiring that Type I subsequent events be recorded in the financial statements.

8. The Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts) states that "the cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders." The recording of Type I subsequent events provides the regulator relevant information to evaluate the financial condition of an entity. However, in some circumstances, the recording of Type I subsequent events is specifically prohibited within Codification (e.g., subsequent collection of agents balances over 90 days due when determining nonadmitted agents balances).

9. Identifying events that require adjustment of the financial statements under the criteria stated in the conclusion calls for the management of the entity to exercise judgment and accumulate knowledge of the facts and circumstances surrounding the event. For example, a loss on an uncollectible agent's balance as a result of an agent's deteriorating financial condition leading to bankruptcy subsequent to the balance sheet date would be indicative of conditions existing at the balance sheet date, thereby requiring the recording of such event to the financial statements before their issuance. On the other hand, a similar loss resulting from an agent's major casualty loss such as a fire or flood subsequent to the balance sheet date would not be indicative of conditions existing at the balance sheet date and recording of the event to the financial statements would not be appropriate. However, this is a Type II subsequent event which would require disclosure in the notes to the financial statements as described in paragraph 5 above.

10. Additionally, the Statement of Concepts states that "Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity's short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g., notes to the financial statements, management's discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided." Disclosure of Type II subsequent events meets this objective. Examples of Type II events that require disclosure to the financial statements (but should not result in adjustment) are: i) sale of a bond or capital stock issue, ii) purchase of a business, iii) settlement of litigation when the event giving rise to the claim took place subsequent to the balance sheet date and iv) casualty losses resulting from a hurricane or earthquake subsequent to the balance sheet date.
RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

11. The Annual Statement Instructions for Life and Accident and Health Insurance Companies require disclosure of subsequent events in the notes to the financial statements as follows:

   Events Subsequent Instruction:
   Describe any events occurring subsequent to the close of the books or accounts for this statement which may have a material effect on the financial condition of the company.

   Illustration:
   On February 1, 19__, the Board of Directors adopted a plan for recapitalization subject to shareholder approval, which would effect an amendment to the Certificate of Incorporation to increase the authorized common shares from __________to __________.

12. The Annual Statement Instructions for Property and Casualty Insurance Companies is similar to the Life and Accident and Health instructions above.

13. Part 1, Section 5, Report on Full Scope Examination, of the NAIC Financial Condition Examiners Handbook discusses reporting of transactions consummated subsequent to the effective date of the examination as follows:

   Any transaction consummated by a company subsequent to the effective date of an examination, which is for the purpose of adjusting the company’s previously reported financial condition, shall not be recognized in the preparation of the examiner’s financial statement in the report of examination.

   Such transaction may be described by a qualifying statement, or statements, when supported by a reference to the original minutes or document evidencing such subsequent transaction or transactions. Such supporting data shall be set forth in a clearly captioned appendix or appendices to the report.

14. Exhibit G to Part 1 (General) of the NAIC Financial Condition Examiners Handbook provides a list of procedures to assist in identifying subsequent events but does not provide guidance as to the treatment of the events once identified. A list of the procedures are as follows:

EXHIBIT G--
REVIEW OF EVENTS SUBSEQUENT TO THE BALANCE SHEET DATE

Company __________ Examination Date __________ Approved By __________

Generally, the period of review of post-balance sheet events extends from the date of the balance sheet to the date of the examination report, which in most cases is the date of substantial completion of the fieldwork. It is usually not possible, however, to extend all procedures to the same date. If delivery of the examination report is unduly delayed, consideration should be given to extending the review to a later date.
The workpaper should contain specific information as to the scope of investigation of subsequent events and the consideration given to each of them. Procedures related to subsequent events that extend into the subsequent period include, but are not necessarily limited to, the items described below.

1. Scan cash receipts records for evidence of proceeds of loans, significant sales of productive assets or other unusual items.
   Amounts over $ ____________ Date through ______________

2. Scan cash disbursements records for unusual payments and payment of liabilities not recorded as of balance-sheet date.
   Amounts over $ ____________ Date through ______________

3. Review general journal entries for entries that would have a material effect upon the financial statement as of balance sheet date.
   Amounts over $ ____________ Date through ______________

4. Read minutes of meetings to directors, stockholders and important committees up to the report date. If minutes have not been prepared, obtain a written representation from the secretary about matters dealt with at such meetings. Review draft (if any) or proxy statement to be issued to shareholders for matters that may affect the financial statements.

5. Read latest available interim financial statements. Compare them with the financial statements being reported on and obtain explanations for any unusual items noted as a result of the comparison.
   Amounts over $ ____________ Date through ______________

6. Inquire of officers and other executives having responsibility for financial and accounting matters as to whether the interim statements have been prepared on the same basis as that used for the statements under examination. (Indicate identity of statements and periods covered.)
   Amounts over $ ____________ Date through ______________

7. Inquire of officers and other executives having responsibility for financial and accounting matters (limited where appropriate to major locations) as to: (NOTE: Indicate persons with whom discussions were held and date and attach memoranda or comments regarding significant matters discussed. Corporate office inquiries should extend to the report date.)
   a. Whether any substantial contingent liabilities or commitments existed at the balance-sheet date or at the date of inquiry.
   b. Whether there was any significant change in the capital stock or debt to the date of inquiry.
   c. The current status of items in the financial statements being reported on that were accounted for on the basis of tentative, preliminary, or inconclusive data.
   d. Whether any other matters had occurred that would materially affect the financial statements or operations of the company. This includes appropriate inquiries as to subsequent events of material affiliates accounted for by the equity method.
Subsequent Events

Amounts over $ ________________ Date through ________________

8. If the above procedures produce responses that significantly affect the financial statements, they should be confirmed in writing. This may be done in the letter of representations.

Amounts over $ ________________ Date through ________________

Generally Accepted Accounting Principles

15. The primary source of GAAP authoritative guidance for the treatment of subsequent events is AICPA Statement on Auditing Standards No. 1, Section 560, Subsequent Events, which states the following:

.01 An independent auditor's report ordinarily is issued in connection with historical financial statements that purport to present financial position at a stated date and results of operations and cash flows for a period ended on that date. However, events or transactions sometimes occur subsequent to the balance sheet date, but prior to the issuance of the financial statements and auditor's report, that have a material effect on the financial statements and therefore require adjustment or disclosure in the statements. These occurrences hereinafter are referred to as "subsequent events."

.02 Two types of subsequent events require consideration by management and evaluation by the independent auditor.

.03 The first type consists of those events that provide additional evidence with respect to conditions that existed at the date of the balance sheet and affect the estimates inherent in the process of preparing financial statements. All information that becomes available prior to the issuance of the financial statements should be used by management in its evaluation of the conditions on which the estimates were based. The financial statements should be adjusted for any changes in estimates resulting from the use of such evidence.

.04 Identifying events that require adjustment of the financial statements under the criteria stated above calls for the exercise of judgment and knowledge of the facts and circumstances. For example, a loss on an uncollectible trade account receivable as a result of a customer's deteriorating financial condition leading to bankruptcy subsequent to the balance-sheet date would be indicative of conditions existing at the balance-sheet date, thereby calling for adjustment of the financial statements before their issuance. On the other hand, a similar loss resulting from a customer's major casualty such as a fire or flood subsequent to the balance-sheet date would not be indicative of conditions existing at the balance-sheet date and adjustment of the financial statements would not be appropriate. The settlement of litigation for an amount different from the liability recorded in the accounts would require adjustment of the financial statements if the events, such as personal injury or patent infringement, that gave rise to the litigation had taken place prior to the balance-sheet date.

.05 The second type consists of those events that provide evidence with respect to conditions that did not exist at the date of the balance sheet being reported on but arose subsequent to that date. These events should not result in adjustment of the financial statements.¹ Some of these events, however, may be of such a nature that disclosure of them is required to keep the financial statements from being misleading. Occasionally such an event may be so significant that disclosure can best be made by supplementing the historical financial statements with pro forma financial data giving effect to the event as if it had occurred on the date of the balance sheet. It may be desirable to present pro forma statements, usually a balance sheet only, in columnar form on the face of the historical statements.
This paragraph is not intended to preclude giving effect in the balance sheet, with appropriate disclosure, to stock dividends or stock splits or reverse splits consummated after the balance-sheet date but before issuance of the financial statements.

Examples of events of the second type that require disclosure to the financial statements (but should not result in adjustment) are:

a. Sale of a bond or capital stock issue.

b. Purchase of a business.

c. Settlement of litigation when the event giving rise to the claim took place subsequent to the balance-sheet date.

d. Loss of plant or inventories as a result of fire or flood.

e. Losses on receivables resulting from conditions (such as a customer's major casualty) arising subsequent to the balance-sheet date.

Subsequent events affecting the realization of assets such as receivables and inventories or the settlement of estimated liabilities ordinarily will require adjustment of the financial statements (see paragraph .03) because such events typically represent the culmination of conditions that existed over a relatively long period of time. Subsequent events such as changes in the quoted market prices of securities ordinarily should not result in adjustment of the financial statements (see paragraph .05) because such changes typically reflect a concurrent evaluation of new conditions.

When financial statements are reissued, for example, in reports filed with the Securities and Exchange Commission or other regulatory agencies, events that require disclosure in the reissued financial statements to keep them from being misleading may have occurred subsequent to the original issuance of the financial statements. Events occurring between the time of original issuance and reissuance of financial statements should not result in adjustment of the financial statements unless the adjustment meets the criteria for the correction of an error or the criteria for prior period adjustments set forth in Opinions of the Accounting Principles Board.* Similarly, financial statements reissued in comparative form with financial statements of subsequent periods should not be adjusted for events occurring subsequent to the original issuance unless the adjustment meets the criteria stated above.

However, see paragraph .05 as to the desirability of presenting pro forma financial statements to supplement the historical financial statements in certain circumstances.

Statutory Issue Paper No. 10

Title:
Uncollected Premium Balances

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. This issue paper addresses direct and group billed uncollected premiums for Property and Casualty and Accident and Health policies. It does not address uncollected and deferred premiums for life considerations, which are addressed in a separate issue paper. The Accounting Practices and Procedures Manuals for Property and Casualty Insurance Companies and for Life and Accident and Health Insurance Companies (the Manuals) do not provide definitive guidance on when to begin aging premiums. This issue paper puts forth a framework for the accounting and reporting of uncollected premium balances that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

2. Premium transactions result in amounts due to the reporting entity that meet the definition of an asset as set forth in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets. First, an evaluation shall be made to determine nonadmitted amounts. Next an evaluation shall be made of the remaining admitted assets in accordance with Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets (Issue Paper No. 5), to determine whether there is an impairment. This two step process is set forth below:

   a. To the extent that there is no related unearned premium, any uncollected premium balances which are over ninety days due shall be accounted for as a nonadmitted asset. If an installment premium is over ninety days due, the amount over ninety days due plus all future installments that have been recorded on that policy shall be accounted for as nonadmitted assets.

   b. Amounts determined to be uncollectible shall be written off: If, in accordance with Issue Paper No. 5, it is probable the uncollected premium balance is uncollectible, any uncollectible premiums receivable shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible and is therefore not written off, disclosure requirements outlined in Issue Paper No. 5 shall be followed.

3. The following provides additional guidance in determining the nonadmitted portion of uncollected premiums:
a. Amounts classified as nonadmitted assets collected subsequent to date of the statutory financial statements - Such amounts should not be used to adjust the nonadmitted asset otherwise calculated.

b. Determination of the Due Date -
   i. The due date for original and deposit premiums is governed by the effective date of the underlying insurance contract and not the agent/reporting entity contractual relationship.
   ii. The due date for endorsement and installment premiums is governed by the effective date of the endorsement and the contractual due date of the installment.
   iii. The due date for audit premiums and retrospective premiums is governed by policy provisions or contract provisions. If the due date for receivables relating to audits is not addressed by policy provisions or contract provisions, any uncollected premium (either accrued or billed) is nonadmitted.
   iv. These provisions are to be applied to all premium receivables except those arising from force placed insurance obtained by a lender for collateral protection, certain policies, known as a Trustee Sales Guarantees (TSGs), issued by title insurance companies to lenders on defaulted real estate loans and crop/hail policies. For forced placed insurance, the due date for purposes of applying paragraph 2 shall be the date of billing. For TSG policies, the due date for purposes of applying paragraph 2 shall be at the expiration of the grace period given to the defaulted debtor, which is provided by statute. Crop/hail premiums are considered installment premiums in accordance with paragraph 3.b.ii. and accordingly, the due date for purposes of applying paragraph 2 shall be governed by the contractual due date of the installment.

DISCUSSION:

4. The Statement of Concepts states:

   The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

5. Based upon the above concept, uncollected premium balances should reflect only amounts that are available to meet both current and future policyholder obligations when the obligations are due. Therefore, amounts determined to be impaired, regardless of aging, should be charged to income in the period such determination is made. Short-term policies shall also be subject to this collectibility analysis. The adoption of this methodology will more appropriately provide the statutory financial statement reader with an indication of those assets available to meet policyholder obligations. Under the conservatism concept of statutory accounting, uncollected premiums over ninety days due, even if they are determined to be collectible, should be nonadmitted and charged to surplus. Uncollected installment premiums over ninety days due, even if they are determined to be collectible, should be nonadmitted along with all future installments. Additionally, the conservatism concept of statutory accounting will not allow subsequent collection of amounts charged to surplus as nonadmitted assets to reduce the nonadmitted asset. These recoveries will be accounted for in the period received.

6. An exception to the due date guidance is provided for force placed insurance and for certain title insurance policies known as TSGs. Force placed insurance is a type of collateral protection insurance
Uncollected Premium Balances

typically offered to financial institutions and other lenders that make loans secured by collateral. Coverage is obtained by the lender when the collateral securing a loan becomes uninsured by the borrower. Due to the nature of this specific type of insurance, most policies or certificates are not issued, and consequently not billed, until after the effective date of coverage. As a result, the due date for purposes of paragraph 2 is the date of billing. TSGs are title insurance policies issued to lending institutions during the foreclosure process on defaulted real estate loans. TSGs are requested by the lending institution, and premium is booked by the reporting entity at the notice of default date. There is, typically by law, a grace period given to the defaulted debtor to bring the loan current. Since the premium is remitted to the reporting entity from the proceeds of the foreclosed property, this grace period results in a lag period before the premium could be collected. As a result, the due date for purposes of paragraph 2 is the date at which the grace period expires.

Drafting Notes/Comments
- A separate issue paper addresses deferred and uncollected life and annuity premiums.
- A separate issue paper addresses nonadmitted assets for retrospective premiums on direct or assumed business; this issue was addressed and codified by the NAIC in 1993. Guidance is included in Chapter 22 of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies.
- A separate issue paper addresses premiums sold with recourse (premium finance company).
- Reinsurance premiums payable, reinsurance commissions receivable, etc., which are currently reported on the same line item in the Annual Statement are addressed in a separate issue paper.
- Accounting for uncollected agents' balances is addressed in Issue Paper No. 6 - Amounts Due From Agents and Brokers.
- Accounting for bills receivable is addressed in Issue Paper No. 21 - Bills Receivable For Premiums.
- Accounting/aging of retrospective premiums currently reported on line 9.2 or 9.3 is addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
7. The draft discussion material from previous Property/Casualty codification projects suggested aging of all original or renewal premiums receivable to begin as of the effective date of the policy. In addition, the proposed version suggests endorsement premiums begin aging from the effective date of the endorsement and installment premiums begin aging from the contractual due date of the installment. This presentation is consistent with GAAP and provides for a conservative aging process.

8. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 7, Agents' Balances or Uncollected Premiums, page 2, paragraph 2, provides the following guidance:

To satisfy the requirements of the annual statement blank, agents' balances or uncollected premiums over three months due are nonadmitted assets. (See Chapter 9 – Nonadmitted Assets, see excerpt below.)

9. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 9, Nonadmitted Assets, page 1, point 3, reinforces Chapter 7 by stating the following:
Agents Balances or Uncollected Premiums Over Three Months Due: The statutes of most states require that agents' balances or uncollected premiums over three months due be nonadmitted because of the uncertainty of collection.

10. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies, Exhibit 2 - Analysis of Non-Admitted Assets, Line 24.2 - Premiums, Agents' Balances and Installments Booked but Deferred and Not Yet Due, provides additional guidance for nonadmitting installment premiums as follows:

This item should include all future installments on all policies for which one or more installments are over three months past due.

11. The Accounting Practices and Procedures Manuals for Property and Casualty and for Life and Accident and Health Insurance Companies do not address when the aging of uncollected premiums is to commence; however, the draft discussion material from previous Property/Casualty codification projects suggested the following:

**Original or deposit premiums**

Aging is always based on the effective date of the policy or bond regardless of whether the insurer is using a direct billing system or an account current system.

**Endorsement**

Aging is always based on the effective dates of the endorsements.

**Installments**

Aging is always based on the due date of the installment.

12. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 18, pages 3 and 4, discusses uncollected premiums as follows:

**Accident and Health Policies**

Accident and health insurance policies typically provide a grace period after the due date for the premium to be received before the policy is terminated. If the company is relatively assured of collecting the late premium, and has established an appropriate unearned premium reserve, it is permitted to record such due and uncollected premium as an admitted asset.

On accident and health policies, other than group, with premiums payable more frequently than quarterly, all due and unpaid premiums are not admitted if more than one period premium is overdue. Group premiums more than 90 days overdue also are disallowed as an admitted asset.

Because the policyholder can terminate the policy at any time simply by not paying the premium, the company should consider its lapse experience in determining the amount it records as uncollected premiums. Recording older due premiums (although not more than 90 days past due), which have little or no unearned premium reserve, may overstate the company's financial condition.
Generally Accepted Accounting Principles

13. GAAP accounting for uncollectible premiums/receivables is governed by FASB Statement No. 5, Accounting for Contingencies (FAS 5), paragraphs 1, 3 and 8:

1. For the purpose of this Statement, a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a "gain contingency") or loss\(^1\) (hereinafter a "loss contingency") to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.

\(^1\)The term loss is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.

3. When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms probable, reasonably possible, and remote to identify three areas within that range, as follows:

a) Probable. The future event or events are likely to occur.

b) Reasonably possible. The chance of the future event or events occurring is more than remote but less than likely.

c) Remote. The chance of the future event or events occurring is slight.

8. An estimated loss from a loss contingency (as defined in paragraph 1) shall be accrued by a charge to income\(^3\) if both of the following conditions are met:

a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.\(^4\) It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.

b) The amount of loss can be reasonably estimated.

\(^3\)Paragraphs 23-24 of APB Opinion No. 9, Reporting the Results of Operations, describe the rare circumstances in which a prior period adjustment is appropriate. Those paragraphs are not amended by this Statement.

\(^4\)Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

14. The FAS 5 criteria above is used in interpreting information such as historical trending and general information about the stability of the insureds in an effort to evaluate the collectibility of the receivable balance. Accounting for contingencies is discussed in more detail in Issue Paper No. 5.
15. GAAP accounting requires the aging of direct billed premiums to begin from the effective date of the policy. Aging for endorsement premiums should begin from the endorsement's effective date and installment premiums should begin from the installment's contractual due date. Although not specifically stated, this guidance can be deduced through review of FASB Statement of Concepts No. 5, Recognition and Measurement in Financial Statements of Business Enterprises, paragraph 83, as follows:

83. Further guidance for recognition of revenues and gains is intended to provide an acceptable level of assurance of the existence and amounts of revenues and gains before they are recognized. Revenues and gains of an enterprise during a period are generally measured by the exchange values of the assets (goods or services) or liabilities involved, and recognition involves consideration of two factors (a) being realized or realizable and (b) being earned, with sometimes one and sometimes the other being the more important consideration.

a. Realized or realizable. Revenues and gains generally are not recognized until realized or realizable. Revenues and gains are realized when products (goods or services), merchandise, or other assets are exchanged for cash or claims to cash. Revenues and gains are realizable when related assets received or held are readily convertible to known amounts of cash or claims to cash. Readily convertible assets have (i) interchangeable (fungible) units and (ii) quoted prices available in an active market that can rapidly absorb the quantity held by the entity without significantly affecting the price.

b. Earned. Revenues are not recognized until earned. An entity’s revenue-earning activities involve delivering or producing goods, rendering services, or other activities that constitute its ongoing major or central operations, and revenues are considered to have been earned when the entity has substantially accomplished what it must do to be entitled to the benefits represented by the revenues. Gains commonly result from transactions and other events that involve no “earning process,” and for recognizing gains, being earned is generally less significant than being realized or realizable.

16. The renewal or establishment of an insurance policy in exchange for a claim to cash (premium receivable) triggers the realization characteristic of revenue recognition, therefore, the aging of the uncollected premium should commence on the effective date of the new or renewed policy. Endorsement premiums will trigger the realization characteristic on the effective date of the endorsement, while installment premiums will trigger the realization characteristic on the contractual due date of the installment.

17. FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises (FAS 60), also provides some indirect guidance. FAS 60, paragraph 13, requires revenue on short-duration contracts to be recognized over the period of the contract in proportion to the amount of insurance protection provided. The contract period starts with the policy effective date. Therefore, it is reasonable to begin aging from the policy effective date, as this is the date when revenue recognition begins.

OTHER SOURCES OF INFORMATION:

18. The draft discussion material from previous Property/Casualty codification projects proposed extensive modifications to the accounting for agents' balances and uncollected premiums. The following represents a summary of those modifications:

When the original or deposit premium is more than ninety days past due based on an aging referenced to effective date and therefore, not admitted, all premiums subsequently charged on the same policies or bonds are similarly not admitted, except that if the amount of such original or
deposit premiums does not exceed 20% of the subsequently charged premiums in the same policies or bonds, such subsequently charged premiums, if otherwise not themselves more than ninety days overdue, shall be allowed as admitted assets.

19. The same basic concept was also discussed for endorsement premiums and installment premiums. In addition, it discussed certain parameters where a greater than ninety day nonadmitted premium could be accounted for as an admitted asset. The modification was stated as follows:

A premium which has been determined to be not admitted may be treated as admitted if it has been collected within forty-five days of the date of determination and not more than ninety days had elapsed from the billing date to the date of determination and further, that not more than one hundred thirty-five days had elapsed from the effective date of the premium to the date of determination.

Statutory Issue Paper No. 11

Title:
Compensated Absences

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory guidance does not specifically address the accounting for compensated absences (i.e., vested vacation benefits, vested sick pay benefits, and holidays) in either the Accounting Practices and Procedures manuals for Life and Accident and Health or for the Property and Casualty Insurance Companies. The purpose of this issue paper is to establish statutory accounting principles for compensated absences that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

2. A reporting entity shall accrue a liability for employees' compensation for future absences if all of the following conditions are met:

   a. The reporting entity’s obligation relating to employees’ rights to receive compensation for future absences is attributable to employees’ services already rendered,

   b. The obligation relates to rights that vest¹ or accumulate²,

   c. Payment of the compensation is probable, and

   d. The amount can be reasonably estimated.

3. In the unlikely situation in which a reporting entity does not accrue a liability in accordance with paragraph 2 only because the amount cannot be reasonably estimated (i.e., condition d. is not met), that fact and the reasons therefore shall be disclosed in a note to the financial statements. An employer is not required to accrue a liability for nonvesting accumulating rights for compensated absences as the right to receive these benefits is contingent upon future events and continued employment.

4. A reporting entity shall accrue a liability for employees’ compensated absences or, for services reimbursable under service agreements with an affiliate, if all of the above conditions are met.

¹ In this issue paper, vested rights are those for which the reporting entity has an obligation to make payment even if an employee terminates; thus, they are not contingent on an employee’s future service.

² For purposes of this issue paper, accumulate means that earned but unused rights to compensated absences may be carried forward to one or more periods subsequent to that in which they are earned, even though there may be a limit to the amount that can be carried forward.
5. Accounting changes adopted to conform to the provisions of this issue paper shall be accounted for in accordance with Issue Paper No. 3 - Accounting Changes. In the year the principle is adopted, recognition of the liability for compensated absences at the time of adoption that has not previously been recorded shall be recognized through a direct charge to surplus.

Consolidated/Holding Company Plans
6. The employees of many reporting entities are eligible for certain compensated absence benefits granted by a parent company or holding company. An entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation from the parent company or holding company of the benefits earned during the period. A liability shall be established for any such amounts due, but not yet paid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for compensated absence benefits, then the requirements outlined above in paragraphs 2 - 5 shall be applied.

DISCUSSION:

7. Paragraphs 2 - 5 of the Summary Conclusion above adopt FASB Statement No. 43, Accounting for Compensated Absences (FAS 43) with certain modifications to paragraphs 8 and 9. Paragraphs 8 and 9 discuss the effective date and the accounting for the retroactive adoption of FAS 43. This issue paper modifies these paragraphs by requiring the initial adoption of this accounting principle to be recorded as a change in accounting principle consistent with Issue Paper No. 3 (i.e., the cumulative effect of the change will be charged to surplus in the year of adoption).

8. Liability, as defined by Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets, is a probable future sacrifice of economic benefit arising from the present obligation of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transactions or events. Compensated absences, which meet the criteria discussed in the conclusion above, meet this definition of a liability. The recording of a liability for compensated absences is also consistent with presenting financial statements which support the Solvency and Conservatism concepts within the Statement of Concepts.

Drafting Notes/Comments
- Holding company obligations are addressed in a separate issue paper.
- Accounting for pensions is addressed in Issue Paper No. 8 - Accounting for Pensions.
- Employers' accounting for postemployment benefits is addressed in Issue Paper No. 13 - Employers' Accounting for Postemployment Benefits.
- Employers' accounting for postretirement benefits other than pensions is addressed in Issue Paper No. 14 - Employers' Accounting for Postretirement Benefits Other Than Pensions.
RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting Principles
9. Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 17, Other Liabilities, provides general guidance on the accrual of compensated absences as follows:

Liabilities for Benefits for Employees and Agents

A company may be required or desire to establish a liability for certain benefits to employees and agents which are not provided for in other accounts. Examples include:

The company may wish to set up a liability for the salary for accrued but unused vacation hours since vacation hours can legitimately be viewed as "earned" at the end of the work periods for which they are granted.

Generally Accepted Accounting Principles
11. The accrual for compensated absences is governed by FAS 43, Accounting for Compensated Absences. Paragraphs 6, 7, 8 and 9 provide for the determination and treatment of compensated absences.

6. An employer shall accrue a liability for employees’ compensation for future absences if all of the following conditions are met:

a. The employer’s obligation relating to employees’ rights to receive compensation for future absences is attributable to employees’ services already rendered,

b. The obligation relates to rights that vest\(^1\) or accumulate\(^2\),

\(\text{\footnotesize 1 In this Statement, vested rights are those for which the employer has an obligation to make payment even if an employee terminates; thus, they are not contingent on an employee’s future service.}\)

\(\text{\footnotesize 2 For purposes of this Statement, accumulate means that earned but unused rights to compensated absences may be carried forward to one or more periods subsequent to that in which they are earned, even though there may be a limit to the amount that can be carried forward.}\)

c. Payment of the compensation is probable, and

d. The amount can be reasonably estimated.

If an employer meets conditions (a), (b), and (c) and does not accrue a liability because condition (d) is not met, that fact shall be disclosed.
7. Notwithstanding the conditions specified in paragraph 6, an employer is not required to accrue a liability for nonvesting accumulating rights to receive sick pay benefits (that is, compensation for an employee’s absence due to illness) for the reasons stated in paragraph 15.

3 In accounting for compensated absences, the form of an employer’s policy for compensated absences should not prevail over actual practices. For example, if employees are customarily paid “sick pay” benefits even though their absences from work are not actually the result of illness or if employees are routinely allowed to take compensated “terminal leave” for accumulated unused sick pay benefits prior to retirement, such benefits shall not be considered sick pay benefits for purposes of applying the provisions of paragraph 7 but rather should be accounted for in accordance with paragraph 6.

Effective Date and Transition

8. This Statement shall be effective for fiscal years beginning after December 15, 1980, with earlier application encouraged. Accounting changes adopted to conform to the provisions of this Statement shall be applied retroactively. In the year that this Statement is first applied, the financial statements shall disclose the nature of any restatement and its effect on income before extraordinary items, net income, and related per share amounts for each year restated.

9. If retroactive restatement of all years presented is not practicable, the financial statements presented shall be restated for as many consecutive years as practicable and the cumulative effect of applying the Statement shall be included in determining net income of the earliest year restated (not necessarily the earliest year presented). If it is not practicable to restate any prior year, the cumulative effect shall be included in net income in the year in which the Statement is first applied. (See paragraph 20 of APB Opinion No. 20, Accounting Changes.) The effect on income before extraordinary items, net income, and related per share amounts of applying this Statement in a year in which the cumulative effect is included in determining that year’s net income shall be disclosed for that year.

OTHER SOURCES OF INFORMATION:

12. Chapter 22 of the NAIC Technical Resource Group Proposed Draft Life Codification suggested the recording of a compensated absence liability under the following circumstances:

Compensated Absences

Employers pay their employees for absences due to vacations, sick time and holidays. Compensated absences must be accrued if all of the following criteria are met:

a. the employees have rendered services which obligate the employer to pay for future absences;

b. the employees are entitled to compensation even if employment is terminated;

c. payment of the compensation is probable; and

d. the amount can be reasonably estimated.

Salary advances to an employee can be used to reduce the liability for that employee’s compensated absences.

Statutory Issue Paper No. 12

Title:
Accounting for Drafts Issued and Outstanding

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory accounting, as documented in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, provides guidance on the accounting for drafts but does not provide a definition of a draft. This issue paper will establish a definition for “draft” and will codify statutory accounting relating to drafts.

SUMMARY CONCLUSION:

2. For purposes of statutory accounting, a “draft” is defined as an order to pay a sum certain in money, which is signed by the drawer (e.g., the insurance company or its agent), and payable to order or bearer (policyholder) by the drawee (bank) only upon approval by the insurance company once the draft has been presented to the drawee.

3. A reporting entity that utilizes instruments that meet the above definition of drafts shall elect one of the following accounting methods:

   a. Draft Issued Method - When a draft is issued, an increase in paid losses and a related decrease in loss reserves is recorded. Drafts that have not been presented for payment and remain outstanding at the balance sheet date are reflected as a liability.

   b. Draft Honored Method - An increase in paid losses and a related decrease in loss reserves is recorded when the draft is cashed and presented by the bank to the reporting entity for reimbursement. Consequently, under a draft honored method there is no liability for outstanding drafts.

The method elected by a reporting entity to account for drafts issued and outstanding shall remain consistent from year to year. Procedures for changes in the accounting method shall be governed by Issue Paper No. 3 - Accounting Changes.

DISCUSSION:

4. Statutory accounting does not address the characteristics of a draft, however, Chapter 13, Other Liabilities, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies does provide specific guidance on how to account for drafts. This guidance is consistent with GAAP accounting procedures for outstanding drafts as discussed in AICPA Statement of Position 92-4, Auditing Insurance Entities’ Loss Reserves.

5. Drafts and checks have different legal characteristics. A check is payable on demand, whereas a draft must be approved for payment by the issuer (the reporting entity) before it is honored by the bank.
Because of these different characteristics, a draft meets the definition of a liability as defined by NAIC Issue No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets. Outstanding checks are accounted for as a reduction of cash.

Drafting Notes/Comments
None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
6. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 13, Other Liabilities, discusses the accounting for drafts as follows:

Companies may record loss and loss expense drafts written to claimants and policyholders on either a draft issued or a draft honored basis. On an issued system, paid losses and appropriate loss reserve releases are recorded when the draft is issued. Drafts that have not been presented for payment and remain outstanding at the balance sheet date are reflected as a liability under this caption.

Companies on a draft honored system do not record paid losses or release loss reserves until the drafts are cashed and presented by the bank to the company for reimbursement. Consequently, under a draft honored system there is no liability for outstanding drafts.

Generally Accepted Accounting Principles
7. AICPA Statement of Position 92-4, Auditing Insurance Entities' Loss Reserves as incorporated through Appendix L of the AICPA Audit and Accounting Guide: Audits of Property and Liability Insurance Companies, discusses the accounting for drafts as follows:

Drafts outstanding -- Some insurance companies may elect to pay claims by draft rather than by check and may not record the drafts as cash disbursed until the drafts are presented to the insurer by the bank. A liability for drafts outstanding is required only if cash disbursements and claim statistical information are not recorded concurrently, thereby creating a timing difference. Because the claim statistical information is updated to reflect the payment, no loss reserve is recorded for the claim; however, because the draft has not been presented, a drafts outstanding liability is required.

Statutory Issue Paper No. 13

Title:
Employers’ Accounting for Postemployment Benefits

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory practices and procedures do not address accounting for the estimated cost of benefits provided by an employer to former or inactive employees or agents after employment but before retirement (referred to as “postemployment benefits”). Postemployment benefits are all types of benefits provided to former or inactive employees or agents, their beneficiaries, and covered dependents. Those benefits include, but are not limited to, salary continuation, supplemental unemployment benefits, severance benefits, disability-related benefits (including workers’ compensation), job training and counseling, and continuation of benefits such as health care benefits and life insurance coverage.

2. The purpose of this issue paper is to establish statutory accounting principles for postemployment benefits that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. Employers shall accrue a liability for the reporting entity’s obligation to provide postemployment benefits if all of the following conditions are met:
   a. The obligation is attributable to employees’ or agents’ services already rendered,
   b. The obligation relates to rights that vest or accumulate,
   c. Payment of the benefits is probable, and
   d. The amount of the benefits can be reasonably estimated.

4. If those four conditions are not met, the employer must account for postemployment benefits when it is probable that a liability has been incurred and the amount can be reasonably estimated. In the unlikely situation in which a reporting entity does not accrue a liability in accordance with paragraph 3 only because the amount cannot be reasonably estimated, that fact and the reasons therefore shall be disclosed in the notes to the financial statements.

5. Postemployment benefits provided to employees or agents in connection with their termination can include special termination benefits and contractual termination benefits. Special termination benefits are defined as those that are offered only for a short period of time; contractual termination benefits are defined as those required by the terms of a plan only if a specified event, such as a facility closing, occurs. An employer that offers special termination benefits to employees or agents shall recognize a liability and an expense when the employees or agents accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and an expense when it is probable that employees or agents will be entitled to benefits and the amount can be reasonably estimated. The cost of such termination benefits shall include the amount of any lump-sum payments and the present value of any expected future payments.
6. Accounting changes adopted to conform to the provisions of this issue paper shall be accounted for in accordance with Issue Paper No. 3 - Accounting Changes. In the year the principle is adopted, recognition of the liability for postemployment benefits at the time of adoption that has not previously been recorded shall be recognized through a direct charge to surplus.

**Consolidated/Holding Company Plans**

7. The employees of many reporting entities are eligible for certain postemployment benefits granted by a parent company or holding company. An entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation from the parent company or holding company of the benefits earned during the period. A liability shall be established for any such amounts due, but not yet paid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for postemployment benefit obligations, then the requirements outlined in paragraphs 3 to 6 above shall be applied.

**DISCUSSION:**

8. Paragraphs 3 - 6 of the Summary Conclusion above adopt FASB Statement No. 112, *Employers' Accounting for Postemployment Benefits: an amendment of FASB Statements No. 5 and 43* (FAS 112), and the provisions of FASB Statement No. 88, *Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits* (FAS 88), that address termination benefits, both with a modification to adopt the principles in accordance with Issue Paper No. 3 - Accounting Changes.

9. The Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts) states under the concept of recognition that "Liabilities require recognition as they are incurred" and "Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment". In addition, the Statement of Concepts states under the concept of conservatism that "In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting". Requiring reporting entities to follow the guidance in FAS 112 and the termination benefit provisions of FAS 88 is consistent with the recognition and conservatism concepts in the Statement of Concepts.

10. Without guidance on accounting for the cost of postemployment benefits, reporting entities' accounting for such benefits can vary. FAS 112 notes in paragraph 2 that:

   Some employers accrued the estimated cost of those benefits over the related service periods of active employees. Other employers applied a terminal accrual approach and recognized the estimated cost of those benefits at the date of the event giving rise to the payment of the benefits (for example, the death of an active employee, the temporary or permanent disability of an active employee, or the layoff of an employee). Still other employers recognized the cost of postemployment benefits when they were paid (cash basis). Some employers may have used different methods of accounting for different types of benefits.

11. FAS 112 does not provide employers with an option to recognize the effect of adoption over future periods. Paragraph 25 of FAS 112 includes the following statements:
The Board considered whether a provision for delayed recognition of the transition amount was needed. A major objective of transition is to minimize implementation costs and mitigate disruption without unduly compromising the ability of financial statements to provide useful information. An important factor considered by the Board was the potential magnitude of the unrecorded postemployment benefit obligation. Information made available to the Board indicated that postemployment benefits are generally not as significant as pension or other postretirement benefits. The Board concluded that a provision for delayed recognition was not needed to mitigate the financial statement impact of immediately recognizing the transition amount when this Statement is adopted. That provision would have added unnecessary complexity to the application of this Statement, reduced financial statement comparability, and been inconsistent with Statements 5 and 43, which do not provide for delayed recognition at transition.

This issue paper adopts this immediate recognition concept.

Drafting Notes/Comments
- Accounting for postemployment benefits incurred in connection with a restructuring is addressed in a separate issue paper addressing restructuring costs and EITF 94-3.
- Accounting for pensions is discussed in Issue Paper No. 8 - Accounting for Pensions.
- Accounting for compensated absences is addressed in Issue Paper No. 11 - Compensated Absences.
- Accounting for postretirement benefits other than pensions is addressed in Issue Paper No. 14 - Employers’ Accounting for Postretirement Benefits Other Than Pensions.
- Holding company obligations are addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
12. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 17, Other Liabilities, contains the following with respect to liabilities for benefits for employees and agents:

Liabilities for Benefits for Employees and Agents

A company may be required or desire to establish a liability for certain benefits to employees and agents which are not provided for in other accounts. Examples include:

1. It may be desirable to hold the liability or a nonqualified pension plan in this category in order to assist the tax department in adjusting their tax deductions.

2. The company may wish to set up a liability for the salary for accrued but unused vacation hours since vacation hours can legitimately be viewed as “earned” at the end of the work periods for which they are granted.

Generally Accepted Accounting Principles
13. FAS 112, requires employers to recognize the obligation to provide postemployment benefits in accordance with FASB Statement No. 43, Accounting for Compensated Absences (FAS 43), if the obligation is attributable to employees’ services already rendered, employees’ rights to those benefits accumulate or vest, payment of the benefits is probable, and the amount of the benefits can be reasonably estimated. If those four conditions are not met, the employer should account for postemployment benefits when it is probable that a liability has been incurred and the amount can be reasonably estimated in accordance with FASB Statement No. 5, Accounting for Contingencies (FAS 5). If an obligation for postemployment benefits is not accrued in accordance with FAS 5 or FAS 43 only because the amount cannot be reasonably estimated, the financial statements shall disclose that fact.
14. FAS 88 has provisions that address accounting for benefits provided to employees in connection with their termination of employment. Special termination benefits are defined as those that are offered only for a short period of time and contractual termination benefits are defined as those required by the terms of a plan only if a specified event, such as a plant closing, occurs. FAS 88 requires an employer that offers special termination benefits to employees to recognize a liability and a loss when the employees accept the offer and the amount can be reasonably estimated. It also requires an employer that provides contractual termination benefits to recognize a liability and loss when it is probable that employees will be entitled to benefits and the amount can be reasonably estimated. The cost of the termination benefits recognized shall include the amount of any lump-sum payments and the present value of any expected future payments.

OTHER SOURCES OF INFORMATION:

15. The draft discussion material from previous Life codification projects, Chapter 17, Other Liabilities, modified the above language:

Liabilities for Benefits for Employees and Agents

A company must establish a liability for certain benefits to employees and agents which are not provided for in other accounts. Examples include deferred compensation and nonqualified benefit plans for employees and agents.

16. The NAIC Technical Resource Group proposed draft Life codification Chapter 22, General Expenses and Taxes, Licenses and Fees, contains the following guidance:

Employee Termination Benefits

For a variety of reasons, companies pay compensation to employees at termination. Such benefits include disability benefits, death benefits, severance payments, unemployment benefits, etc. These benefits are paid after an employee terminates but are typically based on service previously rendered.

The cost of such post-employment benefits must be spread over the working lives of those expected to receive the benefit. These benefits include all benefits paid to or for former or inactive employees (including their beneficiaries and/or dependents) after employment.

Such compensation must be accrued during an employee’s working life if:

a. the benefit to be paid is earned for service previously rendered;
b. the right to those benefits accumulates, vests or;
c. the payment of the benefits is probable; and
d. the amount can be reasonably estimated.

17. The draft discussion material from previous Property/Casualty codification projects, Chapter 23, Non-Claim Operating Expenses, contains the following language:

Salaries, and Employee Relations and Welfare (Including Post Employment Retirement and Other Benefits)

Salaries and payroll related expenses are usually the second largest expense for most insurance companies. SAP requires that salaries and related expenses be accounted for under the accrual basis of accounting (i.e., expense recorded when incurred and not when paid). Pensions and other post retirement benefit plans for which there is no promulgated SAP should be accounted for in
accordance with GAAP as promulgated by the Financial Accounting Standards Board (FASB). (The preceding may need revision based on final outcome of the FASB 106 Task Force.)

Employee compensation and post retirement benefits include, among other things, the following:

1. Salaries and wages
2. Pension plans.
3. Post retirement benefits other than pensions.
5. Stock purchase and option plans.
6. Other deferred compensation

18. In addition, the draft discussion materials from previous Property/Casualty codification projects discusses deferred compensation and special termination benefits specifically and states the following:

**Other Deferred Compensation**

The accounting for other deferred compensation arrangements, which do not constitute pension plans is governed by APB Opinion No. 12, "Omnibus Opinion". APB 12 provides that deferred compensation contracts should be accounted separately for each employee on the accrual basis. The amount of each accrual cannot be less than the present value of the benefits to be provided (including benefits to beneficiaries) by the terms of the contract. The accruals should be made over the employee’s employment period.

**Special Termination Benefits**

FASB 74 “Accounting for Special Termination Benefits Paid to Employees” [FAS 74] provides that,

... an employer that offers for a short period of time special termination benefits to employees shall recognize a liability and an expense when the employees accept the offer and the amount can be reasonable estimated. The amount shall include any lump sum payments and the present value of any expected future payments.

These arrangements may also effect the estimated costs of pension benefits.

19. It should be noted that although FAS 74 has been superseded by FAS 88, the conclusions reached in FAS 74 were incorporated into FAS 88 (i.e., the cost of special termination benefits should be recognized as a liability and a loss when the employees accept the offer and the amount can be reasonable estimated). See paraphrasing from FAS 88 in the Generally Accepted Accounting Principles section of this paper.

Statutory Issue Paper No. 14

Title:
Employers' Accounting for Postretirement Benefits Other Than Pensions

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Postretirement benefits include all forms of benefits, other than retirement income, provided by an employer to retirees. Those benefits may be defined in terms of specified benefits that are provided to retirees as the need for those benefits arises, such as certain health care benefits, or they may be defined in terms of monetary amounts that become payable on the occurrence of a specified event, such as life insurance benefits. Current statutory accounting addresses employers' accounting for postretirement benefits other than pensions.

2. GAAP guidance has been established by FASB Statement No. 106, Employers' Accounting for Postretirement Benefits Other Than Pensions (FAS 106), and differs from the current statutory guidance.

3. The purpose of this issue paper is to establish statutory accounting principles for postretirement benefits other than pensions that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

4. Employers' accounting for postretirement benefits other than pensions under statutory accounting shall be consistent with existing statutory guidance in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. The principles contained therein shall apply to postretirement benefits other than pensions for all eligible and vested employees and vested former employees including their beneficiaries and covered dependents, pursuant to the terms of an employer's undertaking to provide those benefits. Any asset resulting from an overfunding of the plan shall be recorded as a nonadmitted asset.

Disclosure

5. The disclosures to be made in the notes to the statutory financial statements shall be consistent with current statutory accounting as set forth in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies which are included in paragraph 16 of the relevant guidance section of this issue paper.

Consolidated/Holding Company Plans

6. The employees of many reporting entities are eligible for certain postretirement benefits other than pensions provided by a parent company or holding company. A reporting entity with employees who are eligible for those benefits and is not directly liable for those related obligations shall recognize an expense equal to its allocation of the benefits earned during the period. A liability shall be established for any such amounts due, but not yet paid. The reporting entity shall disclose in the notes to the financial
statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the postretirement benefit expense incurred and the allocation methodology shall also be disclosed in the financial statements. If the reporting entity is directly liable for certain postretirement benefits other than pensions, then the requirements outlined in paragraphs 4 and 5 of this issue paper shall be applied.

DISCUSSION:

7. Current statutory accounting and the accounting codified within this issue paper adopt FAS 106 and Accounting Principles Board Opinion No. 12, Omnibus Opinion–1967, paragraphs 6 through 8 with the following modifications:

a. Any asset which results from an excess of the fair value of plan assets over the postretirement benefit obligation shall be recorded as a nonadmitted asset.

b. Calculation of the postretirement benefit obligation shall exclude non-vested employees. Partially vested employees are included only to the extent of their vested amounts.

c. The disclosures required by this issue paper are modified from those required by FAS 106 in consideration of the modification in this issue paper to include only vested employees.

8. This issue paper adopts FASB Emerging Issues Task Force No. 93-3, Plan Assets under FASB Statement No. 106.

9. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies address employers' accounting for postretirement benefits other than pensions and require that the obligation for such benefits be recognized on an accrual basis for current retirees and fully eligible or vested employees. If the fair value of plan assets exceeds the postretirement obligation and a transition asset results, the asset is considered a nonadmitted asset. At transition, the employer may elect to recognize the unfunded postretirement benefit obligation as a charge to statutory surplus in the period of adoption or amortize it as a component of net periodic postretirement benefit cost over a period of up to twenty years.

10. GAAP guidance is established by FAS 106 and differs from the current statutory guidance in that it requires the accrual of expected postretirement benefits for all current and former employees (including retirees, disabled employees, and other former employees who are expected to receive postretirement benefits), their beneficiaries, and covered dependents, pursuant to the terms of an employer's undertaking to provide those benefits. Two options are provided for recognizing the transition obligation. An employer may choose to immediately recognize the transition obligation as the effect of a change in accounting principle, subject to certain limitations. Alternatively, an employer may choose to recognize the transition obligation on a delayed basis over the plan participants' future service periods, with disclosure of the unrecognized amount. However, that delayed recognition cannot result in less rapid recognition than accounting for the transition obligation on a pay-as-you-go basis.

11. The Statement of Concepts states under the recognition concept that "Liabilities require recognition as they are incurred" and "Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment." In addition, the Statement of Concepts states under the concept of conservatism that "In order to provide a margin of protection for policyholders, the
concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting.” Requiring reporting entities to follow the existing statutory guidance relative to accounting for postretirement benefits other than pensions is consistent with the recognition and conservatism concepts in the Statement of Concepts.

Drafting Notes/Comments
- Federal income taxes are addressed in a separate issue paper.
- Holding company obligations are addressed in a separate issue paper.
- Accounting for pensions is addressed in Issue Paper No. 8 - Accounting for Pensions.
- Accounting for postemployment benefits is addressed in Issue Paper No. 13 - Employers’ Accounting for Postemployment Benefits.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
12. The following is an excerpt from the Accounting Practices and Procedures Manuals for Life and Accident and Health [Chapter 17] and for Property and Casualty [Chapter 13] Insurance Companies:

Postretirement Benefits Other Than Pensions

Postretirement benefits are all forms of benefits, other than retirement income, provided by an employer to retirees. Those benefits may be defined in terms of specified benefits that are provided to retirees as the need for those benefits arises, such as certain health care benefits, or they may be defined in terms of monetary amounts that become payable on the occurrence of a specified event, such as life insurance benefits.

An employer shall account for its postretirement benefits on an accrual basis. The postretirement benefit obligation for current retirees and fully eligible or vested employees at transition (initial adoption date*) is measured by estimating the actuarial present value of benefits expected to be received at retirement using explicit assumptions. A health care cost trend rate assumption is used in the estimation. A health care cost trend rate is an assumption about the annual rate(s) of change in the cost of health care benefits currently provided by the postretirement benefit plan, due to factors other than changes in the composition of the plan population by age and dependency status, for each year from the measurement date until the end of the period in which benefits are expected to be paid. The health care cost trend rates implicitly consider estimates of health care inflation, changes in health care utilization or status of the plan participants.

* For most companies, the transition or initial adoption date is January 1, 1993. For companies whose plans are outside the United States and for defined benefits of employers with no more than 500 plan participants in the aggregate, the transition or initial adoption is January 1, 1995.

Plan assets, if any, shall be segregated or restricted, and measured at fair value.

At transition, an employer may elect to recognize the unfunded postretirement benefit obligation immediately in statutory surplus or amortize it as a component of net periodic postretirement benefit cost over a period of up to twenty years.

In each period, estimated postretirement benefits for newly eligible or vested employees shall be accrued at eligibility date ("estimated eligibility cost"). Interest cost on the postretirement benefit obligation at the beginning of the period shall be recognized during the period. Actuarial gains and losses (other than plan asset gains and losses) arising from differences between assumptions
and actual experience upon subsequent remeasurement of the obligation may be recognized as a component of the net periodic postretirement benefit cost in the current period or amortized. The net actuarial gain or loss shall be included as a component of the net periodic postretirement benefit cost for a year, if, as of the beginning of the year, that unrecognized net gain or loss exceeds 10 percent of the greater of the postretirement benefit obligation or the fair value of plan assets. That gain or loss, if not recognized immediately, shall be amortized over the average life expectancy of the employer's fully vested and retiree group. The method elected must be consistently applied.

Gains or Losses On Plan Assets:

Plan asset gains and losses are differences between the actual return on plan assets (including changes in the fair values of plan assets) during a period and the expected return on plan assets for that period. Amortization of an unrecognized net asset gain or loss shall be included as a component of net postretirement benefit cost for a year if, as of the beginning of the year, that unrecognized net gain or loss exceeds 10 percent of the greater of the postretirement benefit obligation or the fair value of plan assets. That excess shall be amortized over the average life expectancy of the employer's fully vested and retiree group.

Plan amendments:

Plan amendments may include provisions that increase or reduce benefits to retirees and fully eligible employees. The cost of benefit improvements is the increase in the postretirement benefit obligation as a result of the plan amendment, measured at the date of the amendment. That increase shall be amortized over the average life expectancy of the employer's fully vested and retiree group.

A plan amendment can reduce, rather than increase, the postretirement benefit obligation. A reduction in that obligation shall first reduce any existing unrecognized plan amendment cost, and then, reduce any remaining unrecognized transition obligation. The excess, if any, shall be amortized on the same basis as plan amendments that increase benefits.

Financial Statement Presentation:

The net periodic postretirement benefit cost (i.e., the estimated eligibility cost, interest cost, actuarial gains or losses, and any amortization costs) shall be reflected in the income statement. If an employer elects immediate recognition of the initial transition obligation, it shall be accounted for as a change of accounting method (i.e., the initial transition obligation is recorded as an adjustment to statutory surplus).

Transition Asset:

If the fair value of plan assets exceeds the postretirement obligation and a transition asset results, the asset shall be considered a nonadmitted asset.

Defined Contribution Plans:

A defined contribution postretirement benefit plan is a plan that provides postretirement benefits by establishing an individual account for each participant and has terms that specify how contributions to the individual's account are to be determined rather than the amount of postretirement benefits the individual is to receive. Under a defined contribution plan, postretirement benefits a plan participant will receive are limited to the amount contributed to the
Employers' Accounting for Postretirement Benefits Other Than Pensions  

plan participant's account, the returns earned on investments of these contributions, and 
forfeitures of other plan participants' benefits that may be allocated to the plan participant's 
account.

To the extent that an employer's defined contributions to an individual's account are vested or 
irrevocable, the net postretirement benefit cost for a period shall be the contribution called for in 
that period. If a plan calls for contributions for periods after an individual retires, the estimated 
costs shall be accrued at retirement date.

Effective Date:

This policy shall be effective for the first quarter financial statements dated March 31, 1993, 
except that plans outside the United States and for defined benefit plans of employees with no 
more than 500 plan participants in the aggregate, this policy shall be effective for 1st quarter 

13. The NAIC Annual Statement Instructions (Annual Statement Instructions) for Life and Accident 
and Health Insurance Companies contain the following language related to Liabilities, Surplus and Other 
Funds:

Line 13 - General Expenses Due or Accrued

Include: Expenses not yet incurred but which it is anticipated will be incurred in connection with 
accident and health claims at the year-end.

Unfunded postretirement benefit obligation.

14. The Annual Statement Instructions also include the following language with respect to Capital 
and Surplus Account:

Details of Write-ins Aggregated at Line 46 for Gains and Losses in Surplus

Report separately any other changes to Capital and Surplus, not included above, including 
amounts received for subordinated surplus debentures.

Include: The initial transition obligation for unfunded postretirement benefit obligation if a company 
elects to immediately recognize such obligation.

(Charges) or credits for extraordinary amounts of taxes (including interest) paid or 
accrued in prior years.

(Charges) or credits for extraordinary amounts of expenses paid or accrued in prior years.

(See Item 7 on Page d of these instructions.)

15. In addition, the Annual Statement Instructions for Exhibit 5 - General Expenses state:

Line 3.31- Other Employee Welfare
Line 3.32- Other Agent Welfare

Expenses included in this line may be reported on a functional basis.
Include: The net periodic postretirement benefit cost.

Meals to employees. (Companies so desiring may exclude this item from Other Employee Welfare or Other Agent Welfare and include it under Details Aggregated on Line 9.3 for Expenses.)

Contributions to employee associations or clubs.

16. The Annual Statement Instructions also provide guidance on information to be included in the notes to the financial statements:

6. Retirement Plans, Deferred Compensation and Other Postretirement Benefit Plans
Instruction:

c. Postretirement Benefit Plans
   Include the following:

   A description of the plan(s).

   A description of the plan's policy.

   The method of determination and the amount of postretirement benefit expense.

   The amount of the postretirement benefit obligation for retirees and fully eligible or vested employees and the fair value of the plan assets valued as of the most recent actuarial valuation date.

   The amount of the postretirement benefit obligation included on Page 3, Line 13 [Life and Accident and Health] or Lines 2 and 4 [Property and Casualty].

   The amount of the postretirement obligation for non vested employees as of the most recent actuarial date.

   The discount and health care cost trend rate used in the estimations.

   The effect of a one-percentage-point increase in the assumed health care cost trend rates for each future year on (1) the aggregate of the estimated eligibility and interest cost components of net periodic postretirement benefit cost and (2) the postretirement benefit obligation for health care benefits (for purposes of this disclosure, all other assumptions shall be held constant and the effects shall be measured based upon the substantive plan that is the basis of accounting).

   Significant matters affecting the year-to-year comparability of the plan information.

   An employer who is a member of a multi-employer plan shall disclose a description of the plan(s), the method of determination and the amount of postretirement benefit expense for the employer/member and the unfunded postretirement benefit obligation.

Postretirement Defined Contribution Plans
 Include the following:

   A description of the plans, including employee groups covered.
The basis for determining contributions.

The nature and effect of significant matters affecting comparability of information for all periods presented.

The amount of cost recognized during the period.

Sample disclosure is also provided.

17. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies includes the following language with respect to Underwriting and Investment Exhibit - Part 4 - Expenses:

The total management fees and the method(s) used for allocation shall be disclosed in the Notes to Financial Statements. The company shall use the same allocation method(s) on a consistent basis.

Line 9 - Employee Relations and Welfare

Include: The net periodic postretirement benefit cost.

Generally Accepted Accounting Principles
18. The following summary from FAS 106, describes the GAAP methodology and concepts:

Summary

This Statement establishes accounting standards for employers’ accounting for postretirement benefits other than pensions (hereinafter referred to as postretirement benefits). Although it applies to all forms of postretirement benefits, this Statement focuses principally on postretirement health care benefits. It will significantly change the prevalent current practice of accounting for postretirement benefits on a pay-as-you-go (cash) basis by requiring accrual, during the years that the employee renders the necessary service, of the expected cost of providing those benefits to an employee and the employee’s beneficiaries and covered dependents.

The Board’s conclusions in this Statement result from the view that a defined postretirement benefit plan sets forth the terms of an exchange between the employer and the employee. In exchange for the current services provided by the employee, the employer promises to provide, in addition to current wages and other benefits, health and other welfare benefits after the employee retires. It follows from that view that postretirement benefits are not gratuities but are part of an employee’s compensation for services rendered. Since payment is deferred, the benefits are a type of deferred compensation. The employer’s obligation for that compensation is incurred as employees render the services necessary to earn their postretirement benefits.

The ability to measure the obligation for postretirement health care benefits and the recognition of that obligation have been the subject of controversy. The Board believes that measurement of the obligation and accrual of the cost based on best estimates are superior to implying, by a failure to accrue, that no obligation exists prior to the payment of benefits. The Board believes that failure to recognize an obligation prior to its payment impairs the usefulness and integrity of the employer’s financial statements.
The Board's objectives in issuing this Statement are to improve employers' financial reporting for postretirement benefits in the following manner:

a. To enhance the relevance and representational faithfulness of the employer's reported results of operations by recognizing net periodic postretirement benefit cost as employees render the services necessary to earn their postretirement benefits

b. To enhance the relevance and representational faithfulness of the employer's statement of financial position by including a measure of the obligation to provide postretirement benefits based on a mutual understanding between the employer and its employees of the terms of the underlying plan

c. To enhance the ability of users of the employer's financial statements to understand the extent and effects of the employer's undertaking to provide postretirement benefits to its employees by disclosing relevant information about the obligation and cost of the postretirement benefit plan and how those amounts are measured

d. To improve the understandability and comparability of amounts reported by requiring employers with similar plans to use the same method to measure their accumulated postretirement benefit obligations and the related costs of the postretirement benefits.

Similarity to Pension Accounting

The provisions of this Statement are similar, in many respects, to those in FASB Statements No. 87, Employers' Accounting for Pensions, and No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits. To the extent the promise to provide pension benefits and the promise to provide postretirement benefits are similar, the provisions of this Statement are similar to those prescribed by Statements 87 and 88; different accounting treatment is prescribed only when the Board has concluded that there is a compelling reason for different treatment. Appendix B identifies the major similarities and differences between this Statement and employers' accounting for pensions.

Basic Tenets

This Statement relies on a basic premise of generally accepted accounting principles that accrual accounting provides more relevant and useful information than does cash basis accounting. The importance of information about cash flows or the funding of the postretirement benefit plan is not ignored. Amounts funded or paid are given accounting recognition as uses of cash, but the Board believes that information about cash flows alone is insufficient. Accrual accounting goes beyond cash transactions and attempts to recognize the financial effects of noncash transactions and events as they occur. Recognition and measurement of the accrued obligation to provide postretirement benefits will provide users of financial statements with the opportunity to assess the financial consequences of employers' compensation decisions.

In applying accrual accounting to postretirement benefits, this Statement adopts three fundamental aspects of pension accounting: delayed recognition of certain events, reporting net cost, and offsetting liabilities and related assets.

Delayed recognition means that certain changes in the obligation for postretirement benefits, including those changes arising as a result of a plan initiation or amendment, and certain changes in the value of plan assets set aside to meet that obligation are not recognized as they occur. Rather, those changes are recognized systematically over future periods. All changes in the
obligation and plan assets ultimately are recognized unless they are first reduced by other changes. The changes that have been identified and quantified but not yet recognized in the employer's financial statements as components of net periodic postretirement benefit cost and as a liability or asset are disclosed.

Net cost means that the recognized consequences of events and transactions affecting a postretirement benefit plan are reported as a single amount in the employer's financial statements. That single amount includes at least three types of events or transactions that might otherwise be reported separately. Those events or transactions -- exchanging a promise of deferred compensation in the form of postretirement benefits for employee service, the interest cost arising from the passage of time until those benefits are paid, and the returns from the investment of plan assets -- are disclosed separately as components of net periodic postretirement benefit cost.

Offsetting means that plan assets restricted for the payment of postretirement benefits offset the accumulated postretirement benefit obligation in determining amounts recognized in the employer's statement of financial position and that the return on those plan assets offsets postretirement benefit cost in the employer's statement of income. That offsetting is reflected even though the obligation has not been settled, the investment of the plan assets may be largely controlled by the employer, and substantial risks and rewards associated with both the obligation and the plan assets are borne by the employer.

Recognition and Measurement

The Board is sensitive to concerns about the reliability of measurements of the postretirement health care benefit obligation. The Board recognizes that limited historical data about per capita claims costs are available and that actuarial practice in this area is still developing. The Board has taken those factors into consideration in its decisions to delay the effective date for this Statement, to emphasize disclosure, and to permit employers to phase in recognition of the transition obligation in their statements of financial position. However, the Board believes that those factors are insufficient reason not to use accrual accounting for postretirement benefits in financial reporting. With increased experience, the reliability of measures of the obligation and cost should improve.

An objective of this Statement is that the accounting reflect the terms of the exchange transaction that takes place between an employer that provides postretirement benefits and the employees who render services in exchange for those benefits. Generally the extant written plan provides the best evidence of that exchange transaction. However, in some situations, an employer's cost-sharing policy, as evidenced by past practice or by communication of intended changes to a plan's cost-sharing provisions, or a past practice of regular increases in certain monetary benefits may indicate that the substantive plan -- the plan as understood by the parties to the exchange transaction -- differs from the extant written plan. The substantive plan is the basis for the accounting.

This Statement requires that an employer's obligation for postretirement benefits expected to be provided to or for an employee be fully accrued by the date that employee attains full eligibility for all of the benefits expected to be received by that employee, any beneficiaries, and covered dependents (the full eligibility date), even if the employee is expected to render additional service beyond that date. That accounting reflects the fact that at the full eligibility date the employee has provided all of the service necessary to earn the right to receive all of the benefits that employee is expected to receive under the plan.
The beginning of the attribution (accrual) period is the employee's date of hire unless the plan only grants credit for service from a later date, in which case benefits are generally attributed from the beginning of that credited service period. An equal amount of the expected postretirement benefit obligation is attributed to each year of service in the attribution period unless the plan attributes a disproportionate share of the expected benefits to employees' early years of service. The Board concluded that, like accounting for other deferred compensation agreements, accounting for postretirement benefits should reflect the explicit or implicit contract between the employer and its employees.

Single Method

The Board believes that understandability, comparability, and usefulness of financial information are improved by narrowing the use of alternative accounting methods that do not reflect different facts and circumstances. The Board has been unable to identify circumstances that would make it appropriate for different employers to use fundamentally different accounting methods or measurement techniques for similar postretirement benefit plans or for a single employer to use fundamentally different methods or measurement techniques for different plans. As a result, a single method is prescribed for measuring and recognizing an employer's accumulated postretirement benefit obligation.

Amendment to Opinion 12

An employer's practice of providing postretirement benefits to selected employees under individual contracts, with specific terms determined on an individual-by-individual basis, does not constitute a postretirement benefit plan under this Statement. This Statement amends APB Opinion No. 12, Omnibus Opinion--1967, to explicitly require that an employer's obligation under deferred compensation contracts be accrued following the terms of the individual contract over the required service periods to the date the employee is fully eligible for the benefits.

Transition

Unlike the effects of most other accounting changes, a transition obligation for postretirement benefits generally reflects, to a considerable extent, the failure to accrue the accumulated postretirement benefit obligation in earlier periods as it arose rather than the effects of a change from one acceptable accrual method of accounting to another. The Board believes that accounting for transition from one method of accounting to another is a practical matter and that a major objective of that accounting is to minimize the cost and mitigate the disruption to the extent possible without unduly compromising the ability of financial statements to provide useful information.

This Statement measures the transition obligation as the unfunded and unrecognized accumulated postretirement benefit obligation for all plan participants. Two options are provided for recognizing that transition obligation. An employer can choose to immediately recognize the transition obligation as the effect of an accounting change, subject to certain limitations. Alternatively, an employer can choose to recognize the transition obligation in the statement of financial position and statement of income on a delayed basis over the plan participants' future service periods, with disclosure of the unrecognized amount. However, that delayed recognition cannot result in less rapid recognition than accounting for the transition obligation on a pay-as-you-go basis.
Effective Dates

This Statement generally is effective for fiscal years beginning after December 15, 1992, except that the application of this Statement to plans outside the United States and certain small, nonpublic employers is delayed to fiscal years beginning after December 15, 1994. The amendment of Opinion 12 is effective for fiscal years beginning after March 15, 1991.

Paragraph 74 of FAS 106 sets forth disclosure requirements:

74. This statement requires disclosures about an employer's obligation to provide postretirement benefits and the cost of providing those benefits that are intended to enhance the usefulness of the financial statements to investors, creditors, and other users of financial information. An employer sponsoring one or more defined benefit postretirement plans (refer to paragraphs 77 and 78) shall disclose, if applicable, the following information about those plans:

a. A description of the substantive plan(s) that is the basis for the accounting (refer to paragraphs 23-28), including the nature of the plan, any modifications of the existing cost-sharing provisions that are encompassed by the substantive plan(s) (refer to paragraphs 24 and 25), and the existence and nature of any commitment to increase monetary benefits provided by the postretirement benefit plan (refer to paragraph 26), employee groups covered, types of benefits provided, funding policy, types of assets held and significant nonbenefit liabilities, and the nature and effect of significant matters affecting the comparability of information for all periods presented, such as the effect of a business combination or divestiture.

b. The amount of net periodic postretirement benefit cost showing separately the service cost component, the interest cost component, the actual return on plan assets for the period, amortization of the unrecognized transition obligation or transition asset, and the net total of other components 23

23 The net total of other components is generally the net effect during the period of certain delayed recognition provisions of this Statement. That net total includes:

a. The net asset gain or loss during the period deferred for later recognition (in effect, an offset or a supplement to the actual return on plan assets)

b. Amortization of unrecognized prior service cost

c. Amortization of the net gain or loss from earlier periods

d. Any gain or loss recognized due to a temporary deviation from the substantive plan (paragraph 61).

c. A schedule reconciling the funded status of the plan(s) with amounts reported in the employer's statement of financial position, showing separately:

(1) The fair value of plan assets

(2) The accumulated postretirement benefit obligation, identifying separately the portion attributable to retirees, other fully eligible plan participants, and other active plan participants

(3) The amount of unrecognized prior service cost
(4) The amount of unrecognized net gain or loss (including plan asset gains and losses not yet reflected in market-related value)

(5) The amount of any remaining unrecognized transition obligation or transition asset

(6) The amount of net postretirement benefit asset or liability recognized in the statement of financial position, which is the net result of combining the preceding five items

d. The assumed health care cost trend rate(s) used to measure the expected cost of benefits covered by the plan (gross eligible charges) for the next year and a general description of the direction and pattern of change in the assumed trend rates thereafter, together with the ultimate trend rate(s) and when that rate is expected to be achieved

e. The weighted-average of the assumed discount rate(s) and rate(s) of compensation increase (for pay-related plans) used to measure the accumulated postretirement benefit obligation and the weighted-average of the expected long-term rate(s) of return on plan assets and, for plans whose income is segregated from the employer's investment income for tax purposes, the estimated income tax rate(s) included in that rate of return

f. The effect of a one-percentage-point increase in the assumed health care cost trend rates for each future year on (1) the aggregate of the service and interest cost components of net periodic postretirement health care benefit cost and (2) the accumulated postretirement benefit obligation for health care benefits. (For purposes of this disclosure, all other assumptions shall be held constant and the effects shall be measured based on the substantive plan that is the basis for the accounting.)

g. The amounts and types of securities of the employer and related parties included in plan assets, and the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer and related parties

h. Any alternative amortization method used pursuant to paragraphs 53 or 60

i. The amount of gain or loss recognized during the period for a settlement or curtailment and a description of the nature of the event(s) (Refer to paragraphs 90-99.)

j. The cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event(s). (Refer to paragraphs 101 and 102.)

Statutory Issue Paper No. 16

Title:  
Electronic Data Processing Equipment and Software

Status:  
Finalized March 16, 1998

Type of Issue:  
Common Area

SUMMARY OF ISSUE:

1. The current statutory guidance provides that some states permit recording electronic data processing (EDP) equipment and operating system software as admitted assets. This is subject to limitations such as a percentage of total assets, minimum purchase price, and period of depreciation. Application system software may be expensed when purchased, or established as a nonadmitted asset and written off over a period of years not to exceed the software's expected useful life.

2. GAAP requires purchases of EDP equipment and software to be capitalized and depreciated over the expected useful lives of the assets, except for software purchased or leased for research and development purposes, which is required to be expensed at acquisition. There is no authoritative literature in GAAP that addresses capitalization of software developed for internal use, and industry practice is mixed. This issue paper establishes a framework for the accounting and reporting of EDP equipment and software that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. EDP equipment and software generally meet the definition of an asset in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets. EDP equipment and operating system software are admitted assets to the extent they conform to the requirements of this issue paper. Nonoperating system software meet the criteria defining nonadmitted assets; accordingly, such assets shall be reported as nonadmitted assets and charged against surplus.

4. EDP equipment and software shall be depreciated for a period not to exceed three years using methods detailed in Issue Paper No. 67 - Depreciation of Property and Amortization of Leasehold Improvements.

5. The aggregate amount of admitted EDP equipment and operating system software (net of accumulated depreciation) shall be limited to three percent of the reporting entity's capital and surplus, excluding from capital and surplus any EDP equipment and operating system software, net deferred tax assets and net positive goodwill, as of the financial statement date.

6. The following disclosures shall be made in the financial statements:

   a. Depreciation and amortization expense for the period;

   b. For EDP equipment and operating system software, balances of major classes of depreciable assets, by nature or function, at the balance sheet date;
c. For EDP equipment and operating system software, accumulated depreciation and amortization, either by major classes of depreciable assets or in total, at the balance sheet date; and

d. A general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets.

DISCUSSION:

7. Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets states that an asset not readily available to satisfy policyholder obligations "shall be recorded as a nonadmitted asset and charged against surplus." This is consistent with the Statement of Concepts, which states that a reporting entity's "ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due."

8. EDP equipment and operating system software meet the criteria defining admitted assets because they generally have a resale value. The limitation of the depreciation period to three years is deemed appropriate due to the current evolutionary period for such equipment and software. Additionally, the limitation on the amount of EDP equipment and operating system software which may be admitted in an amount not to exceed three percent of capital and surplus (as adjusted by EDP equipment and operating system software, net deferred tax assets and net positive goodwill) is consistent with the conservatism concept of the Statement of Concepts.

9. Nonoperating system software is not considered readily available to satisfy policyholder obligations, particularly due to the nature of internally developed EDP software and the modifications made to purchased EDP software, that make it tailored for use only on the owner's computer system, thereby rendering it unable to be readily resold. Nonadmitting nonoperating software is also consistent with the conservatism concept of the Statement of Concepts.

Drafting Notes/Comments
- FASB Statement No. 2, Accounting for Research and Development Costs (FAS 2), FASB Interpretation No. 6, Applicability of FASB Statement No. 2 to Computer Software (FIN 6) and FASB Statement No. 86, Accounting for the Costs of Computer Software to be Sold, Leased, or Otherwise Marketed (FAS 86) are addressed in Issue Paper No. 17 - Preoperating and Research and Development Costs.
- Furniture, fixtures & equipment are addressed in Issue Paper No. 19 - Furniture, Fixtures and Equipment.
- Leases and sale-leaseback transactions are addressed in Issue Paper No. 22 - Leases

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
10. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies, Chapter 8, Other Admitted Assets, differentiates between operating software and applications software as follows:

1. Various states permit showing the depreciated value of electronic data processing apparatus and related equipment constituting a data processing record keeping or accounting system as an asset. This is subject to limitations such as a percentage of total assets, minimum purchase price and period of depreciation. Operating system software may also qualify as an asset. The operating system is a program or series of programs controlling the data job and task management operations of a computer or a computer network through
Electronic Data Processing Equipment and Software

executive scheduling and monitoring. It increases the productivity of a computer installation by managing the allocation of all available computer resources including the control processing unit, main storage and input/output devices. Applications systems software such as language processors, library routines and debugging aides and other computer software are not considered operating system software and may not be recognized as admitted assets.

11. Chapter 9, Nonadmitted Assets, states: “application systems software may be expensed when purchased or established as a nonadmitted asset and written off over a period of years not to exceed the software’s expected useful life.”

13. In most states the depreciated value of EDP equipment and its related operating software is an admitted asset, generally subject to several restrictions. The restrictions could include the following: requiring permission from the insurance commissioner of the state of domicile, setting a minimum amount that can be capitalized as an asset, establishing a maximum depreciable life (such as 10 years for hardware and five years for software) and limiting the amount that may be admitted to a percentage of total admitted assets or capital and surplus. Applications software is typically nonadmitted.

Generally Accepted Accounting Principles

14. GAAP requires purchases of long-lived equipment to be capitalized at their historical cost and depreciated over the expected useful life of the assets by recording a monthly charge against current income, in accordance with Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins (ARB 43), Chapter 9, Depreciation. This treatment is consistent with the matching concept of GAAP, which requires revenues and expenses to be recognized over the period in which they are earned or incurred.

Statutory Issue Paper No. 17

Title:
Preoperating and Research and Development Costs

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. This issue paper addresses organizational costs, research and development costs and start-up costs for new and existing entities. Current statutory accounting guidance does not specifically address the treatment of such costs. Standard statutory practice is to expense these costs as incurred. GAAP specifically addresses the treatment of research and development costs and costs of development stage enterprises. GAAP provides limited guidance on the treatment of other organizational costs resulting in varied practices.

2. The purpose of this issue paper is to establish specific statutory accounting principles related to preoperating and research and development costs that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. Preoperating, including organization and start up costs, and research and development costs shall be expensed as incurred. Preoperating and research and development costs are incurred for such new projects as: (1) arranging operations for a new company (e.g., legal, actuarial and accounting costs associated with regulatory approval and licensing and issuance of stock); (2) establishing production, sales or service facilities at a new site; (3) changing operations or production significantly; or (4) developing and producing a new product, adopting a new process or offering a new service. Preoperating, including organization and start up costs, and research and development costs specifically exclude tangible assets acquired in connection with such activities.

DISCUSSION:

4. This issue paper adopts FASB Statement No. 2, Accounting for Research and Development Costs (FAS 2) and the related FASB Interpretation No. 6, Applicability of FASB Statement No. 2 To Computer Software (FIN 6) and rejects FASB Statement No. 7, Accounting and Reporting by Development Stage Enterprises (FAS 7). This issue paper also adopts FASB Statement No. 86, Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed (FAS 86), with the exception of paragraphs 5 and 6 and paragraphs 8 through 11, which are rejected.

5. Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets (Issue Paper No. 4) defines an asset as "probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events." Although in some instances preoperating and research and development costs may appear to comply with the definition of an asset established by Issue Paper No. 4, it is not consistent with the Conservatism concept included in the Statement of Concepts to estimate that it is "probable" that an entity in a preoperating phase or a new product still being developed will generate
future economic benefits. Preoperating and research and development costs, therefore, do not meet the
definition of an asset for statutory accounting purposes and as such should be expensed as incurred. This
is consistent with the Recognition concept included in the Statement of Concepts, which states that a
reporting entity's "ability to meet policyholder obligations is predicated on the existence of readily
marketable assets available when both current and future obligations are due."

6. FAS 2 requires research and development costs (e.g., costs related to the development of an
insurance product providing a new form of coverage or modifications to an existing insurance product) to
be expensed as incurred. FAS 7 specifies that the accounting of the cost of a development stage
enterprise should be no different than the accounting for similar costs of a mature enterprise. FAS 7
requires that the recoverability of costs incurred by a development stage enterprise be assessed in order to
identify which costs qualify for capitalization or deferral. It permits recognition of these costs as an asset
if they meet the GAAP criteria for capitalization. Other organizational costs are not specifically
described in GAAP literature resulting in varied practices. Companies which have capitalized these costs
do so under the matching concept of relating costs to revenue. Under this theory, revenue will be realized
through future operations and therefore the costs should be deferred and expensed in the future when the
revenue is recognized. Because the future benefit is rarely certain or measurable and the future period
over which deferred costs might be allocated is usually arbitrary, deferral is not consistent with the
Conservatism and Recognition concepts included in the Statement of Concepts.

7. FAS 86 reaffirms the provisions of FAS 2 for the treatment of software developed to be sold,
leased or otherwise marketed by requiring the related software development costs to be expensed as
incurred, with the exception of software costs incurred subsequent to the research and development phase
but prior to making the software available to the public. Paragraphs 5, 6 and 8 through 11 of FAS 86
allow these costs to be capitalized. For the purposes of this paper, these costs are not considered to be
different from the other costs incurred during a preoperating or research and development period and are
included in the conclusion to expense these costs as incurred.

Drafting Notes/Comments
- Accounting treatment of goodwill, real estate, EDP equipment and software and furniture and
equipment are addressed in separate issue papers.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
8. The majority of states do not specifically address the admission of preoperating costs in their
insurance regulations and statutes. Typically, a reference is made to the treatment of goodwill and all
other intangible assets. An example of this type of state guidance is New York Statutes - Insurance Laws,
Chapter 28 of the Consolidated Insurance Laws, Article 13, Assets and Deposits, which states:

The following shall not be allowed as admitted assets of a domestic or foreign insurer or the United
States branch of an alien insurer in any determination of its financial condition:

(1) Goodwill, trade names, agency plants and other like intangible assets.

9. Several states do make specific reference to organization costs in their insurance regulations and
statutes. For example, Maryland Insurance Statutes - Insurance Laws, Article 48A -- Insurance Code,
Subtitle 5, Assets and Liabilities, explicitly requires the nonadmission of organization costs, as opposed
to expensing them as incurred.
Preoperating and Research and Development Costs

Generally Accepted Accounting Principles

10. FAS 2, paragraph 12, states that “All research and development costs encompassed by this Statement shall be charged to expense when incurred.”

11. FAS 2 contains the following definitions:

8. For purposes of this Statement, research and development is defined as follows:

a) Research is planned search or critical investigation aimed at discovery of new knowledge with the hope that such knowledge will be useful in developing a new product or service (hereinafter “product”) or a new process or technique (hereinafter “process”) or in bringing about a significant improvement to an existing product or process.

b) Development is the translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use. It includes the conceptual formulation, design, and testing of product alternatives, construction of prototypes, and operation of pilot plants. It does not include routine or periodic alterations to existing products, production lines, manufacturing processes, and other on-going operations even though those alterations may represent improvements and it does not include market research or market testing activities.

12. FIN 6, paragraph 5, states:

When software for use in research and development activities is purchased or leased, its cost shall be accounted for as specified by paragraphs 11(c) and 12 of Statement No. 2. That is, the cost shall be charged to expense as incurred unless the software has alternative future uses (in research and development or otherwise).

13. FAS 86 amends FAS 2 and FIN 6 to provide guidance on accounting for software developed internally for sale, lease or other marketing. FAS 86, paragraph 3, states:

All costs incurred to establish the technological feasibility of a computer software product to be sold, leased, or otherwise marketed are research and development costs. These costs shall be charged to expense when incurred as required by FASB Statement No. 2, Accounting for Research and Development Costs.

14. FAS 86, paragraphs 5 and 6, addresses the treatment of the costs of internally developed software that has completed the research and development phase but has not been made available to the public. FAS 86, paragraph 5, states:

Costs of producing product masters incurred subsequent to establishing technological feasibility shall be capitalized. Those costs include coding and testing performed subsequent to establishing technological feasibility. Software production costs for computer software that is to be used as an integral part of a product or process shall not be capitalized until both (a) technological feasibility of the product has been established for the software and (b) all research and development activities for the other components of the product or process have been completed.

15. FAS 86, paragraph 6, states:

Capitalization of computer software costs shall cease when the product is available for general release to customers. Costs of maintenance and customer support shall be charged to expense when related revenue is recognized or when those costs are incurred, whichever occurs first.
16. Paragraphs 8 through 11 of FAS 86 address the accounting and disclosure requirements for software costs capitalized under the provisions of paragraph 5 above.

17. FAS 7 states:

Generally accepted accounting principles that apply to established operating enterprises shall govern the recognition of revenue by a development stage enterprise and shall determine whether a cost incurred by a development stage enterprise is to be charged to expense when incurred or is to be capitalized or deferred. Accordingly, capitalization or deferral of costs shall be subject to the same assessment of recoverability that would be applicable in an established operating enterprise.

Statutory Issue Paper No. 19

Title:
Furniture, Fixtures and Equipment

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. The current statutory accounting guidance allows reporting entities to record furniture and equipment as assets, depreciate those assets, and nonadmit the undepreciated balance in the statutory financial statements. Alternatively, reporting entities may expense furniture and equipment when purchased. Guidance found in state statutes varies widely on the treatment of furniture, fixtures and equipment. GAAP requires purchases of furniture, fixture and equipment to be capitalized and depreciated over the expected useful lives of the assets. This issue paper establishes a framework for the accounting and reporting of furniture and equipment that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

2. Furniture, fixtures and equipment generally meet the definition of assets established in Issue Paper No. 4 o Definition of Assets and Nonadmitted Assets (Issue Paper No. 4). Within that definition, such items also meet the criteria defining nonadmitted assets. As such, the undepreciated portion of these assets shall be reported as nonadmitted assets and charged against surplus. These nonadmitted assets shall be depreciated against net income as the estimated economic benefit expires. This conclusion is a change from current statutory guidance because an acquisition which meets the definition of an asset established in Issue Paper No. 4 may no longer be expensed. This change will promote uniformity in the accounting for furniture, fixtures and equipment.

3. In accordance with the reporting entity’s capitalization policy, immaterial amounts of furniture, fixtures, and equipment, or supplies, can be expensed when purchased.

DISCUSSION:

4. Issue Paper No. 4 defines an asset as “probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.” Issue Paper No. 4 also states that an asset not readily available to satisfy policyholder obligations “shall be recorded as a nonadmitted asset and charged against surplus.” This is consistent with the Statement of Concepts, which states that a reporting entity’s “ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due.” Furniture, fixtures and equipment meet the definition of an asset but are not considered readily available to satisfy policyholder obligations. Therefore, it is in conformity with the above guidance to nonadmit these assets. This is also consistent with the concept of conservatism included in the Statement of Concepts.
RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
5. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies (Chapter 9, Nonadmitted Assets, in both manuals) require the nonadmission of furniture and equipment via one of two accounting methods:

1. The reporting entity may record furniture and equipment as an asset, depreciate it through the Summary of Operations and record the change in the nonadmitted amount through Exhibit 14 for Life and Accident and Health Insurance Companies or Exhibit 2 for Property and Casualty Insurance Companies, which directly affects surplus.

2. The reporting entity may expense furniture and equipment when purchased.

6. Guidance found in state statutes is not consistent on this issue. Some states allow the undepreciated balances of furniture and equipment over a specified cost threshold to be treated as admitted assets, in amounts up to stipulated percentages of the aggregate of all other assets. The threshold for capitalization and the percentage of admitted asset limits permitted vary widely. An example is the Texas Statutes - Insurance Laws, Texas Insurance Code, Chapter 3, Life, Health and Accident Insurance, subchapter A. Terms Defined; Domestic Companies, which allows furniture, fixtures and equipment, including a data processing system, used in connection with the business of an insurance company to be admitted if the total value of the property exceeds $2,000 and constitutes less than 10% of the aggregate other admitted assets of the company. Assets which do not meet the threshold for capitalization (i.e., supplies) are expensed when purchased. Other states place no capitalization threshold on furniture, fixtures and equipment but require the assets to be amortized over a period not to exceed a specified number of years. For example, Florida Administrative Code, Title 38, Chapter 38F-5, Self-Insurers Funds, allows all furniture, fixtures and equipment of self insurers to be admitted as long as the assets are depreciated over a five-year useful life. Some states waive both the threshold for capitalization and the useful life requirement and only place limits on the percentage of admitted assets that the undepreciated balance of furniture, fixtures and equipment may comprise. An example is the Idaho statutes, Insurance Laws, Title 41, Insurance, Chapter 6, Assets and Liabilities, which states, “All office equipment, office furniture, private passenger automobiles, deemed necessary for conduct of insurance business, the aggregate amount of which shall not at any one time exceed one percent (1%) of the other assets of the insurer.”

Generally Accepted Accounting Principles
7. GAAP requires purchases of furniture, fixtures and equipment to be capitalized at their historical cost and depreciated over the expected useful life of the assets by recording a monthly charge against current income, in accordance with Accounting Research Bulletin No. 43, Restatement on Revision of Accounting Research Bulletins, Chapter 9, Depreciation. This treatment is consistent with the matching concept of GAAP, which requires revenues and expenses to be recognized in income over the period in which they are earned or incurred. Furniture, fixtures and equipment are reported in the balance sheet at their historical cost net of accumulated depreciation.

Statutory Issue Paper No. 20

Title:
Gain Contingencies

Status:
Finalized March 16, 1998

Type of Issue:
Common area

SUMMARY OF ISSUE:

1. Current statutory guidance does not address accounting for gain contingencies. GAAP requires contingencies that may result in gains to be disclosed but not recorded in current year income.

2. This issue paper establishes the statutory accounting for gain contingencies that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. For purposes of applying this statutory accounting principle, a “gain” shall be defined as an increase in surplus (net assets) which results from peripheral or incidental transactions of a reporting entity and from all other transactions and other events and circumstances affecting the reporting entity except those that result from revenues or investments by owners. If, on or before the balance sheet date, (a) the transaction or event has been fully completed, and (b) the amount of the gain is determinable, then the transaction or event is considered a gain, and is recognized in the financial statements. This definition excludes increases in surplus that result from activities that constitute a reporting entity’s ongoing major or central operations or activities. Because investment activities are central to an insurer’s operations, increases in surplus that result from such investment activities are excluded from the definition of gains. Revenues are inflows or other enhancements of assets of a reporting entity or settlements of its liabilities (or a combination of both) from providing products, rendering services, or other activities that constitute the reporting entity’s ongoing major or central operations. Investments by owners include any type of capital infused into the surplus of the reporting entity.

4. A “gain contingency” shall be defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible “gain” (as defined in the preceding paragraph) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur (e.g., a plaintiff has filed suit for damages associated with an event occurring prior to the balance sheet, but the outcome of the suit is not known as of the balance sheet date). Gain contingencies shall not be recognized in a reporting entity’s financial statements. However, if subsequent to the balance sheet date but prior to the issuance of the financial statements, the gain contingency is realized, the gain shall be disclosed in the notes to financial statements and the unissued financial statements should not be adjusted to record the gain. A gain is generally considered realizable when noncash resources or rights are readily convertible to known amounts of cash or claims to cash.

5. Gain contingencies shall not be recorded in a reporting entity’s financial statements. The notes to the financial statements shall contain adequate disclosure about the nature of the gain contingency. However, care should be exercised to avoid misleading implications as to the likelihood of realization.
DISCUSSION:

6. This issue paper adopts paragraph 17 of FASB Statement No. 5, Accounting for Contingencies (FAS 5), which provides guidance with respect to the accounting and reporting of gain contingencies.

7. The definition of a "gain", as stated in paragraph 3 above, is consistent with that of FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements (CON 6). This definition of gains excludes investment activities of insurance companies.

8. Disclosure in a note to the financial statements but not recording a gain contingency is consistent with the conservatism and recognition concepts included in the Statement of Concepts. In addition, it prevents the recognition of transactions before the earnings process is completed (as prescribed in the recognition concept in the Statement of Concepts).

Drafting Notes/Comments
- Accounting for loss contingencies is addressed in Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets
- Revenue recognition issues are addressed in separate issue papers
- Income taxes are addressed in a separate issue paper
- Reinsurance agreements are addressed in a separate issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
9. As noted above, current statutory guidance does not address gain contingencies. However, the conservatism and recognition concepts of the Statement of Concepts provide guidance which can be applied to the accounting treatment of gain contingencies. The conservatism concept of the Statement of Concepts states the following:

To the extent that factors or events result in adverse variation from management's accounting estimates, the ability to meet policyholder obligations may be lessened. In order to provide a margin of protection for policyholders, the concept of conservatism should be followed when developing estimates as well as establishing accounting principles for statutory reporting. Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results.

10. The recognition concept of the Statement of Concepts states that "Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed."

Generally Accepted Accounting Principles
11. FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements (CON 6), paragraphs 78 and 82, defines revenues and gains as follows:

Revenues are inflows or other enhancements of assets of an entity or settlements of its liabilities (or a combination of both) from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

Gains are increases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity except those that result from revenues or investments by owners.

12. Additionally, paragraph 88 states the following:
Items that are revenues for one kind of entity may be gains for another, and items that are expenses for one kind of entity may be losses for another. For example, investments in securities that may be sources of revenues and expenses for insurance or investment companies may be sources of gains and losses in manufacturing or merchandising companies.

13. GAAP literature addresses accounting for gain contingencies in both general terms and in the event of gain contingencies which result from specific accounting treatments required by GAAP. FAS 5 provides general guidance for the treatment of gain contingencies. FAS 5, paragraph 17, states the following:

Contingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization.

Adequate disclosure shall be made of contingencies that might result in gains, but care shall be exercised to avoid misleading implications as to the likelihood of realization.

14. Examples of GAAP literature which require a conservative treatment of gain recognition in specific accounting situations include:

1. FASB Statement No. 88, Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits, paragraph 14, which requires gains due to the curtailment of all or a portion of a defined benefit pension plan to be recognized in income only when the related employee terminations occur, as opposed to curtailment losses which must be recognized in income when it is probable that the curtailment will occur and the effects are reasonably estimable.

2. Accounting Principles Board Opinion No. 30, Reporting the Results of Operations--Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions, paragraph 15, which requires gains from the disposal of a segment of a business to be recognized in income at the actual disposal date, as opposed to losses from the disposal of a segment of a business which must be recognized in income at the measurement date (i.e. the date at which management commits to a formal plan to dispose the segment).

Statutory Issue Paper No. 21

Title:
Bills Receivable For Premiums

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Bills receivable, which are generally interest bearing, are used by reporting entities as methods of financing premiums. The Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies provides guidance on the accounting for bills receivable taken for premiums. However, the guidance for bills receivable in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies relates to non-premium loans (which will be addressed in a separate issue paper). This issue paper establishes statutory accounting for bills receivable for premiums that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

2. Bills receivable for premiums meet the definition of assets as set forth in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets. First, an evaluation shall be made to determine nonadmitted amounts. Next, an evaluation shall be made of such assets in accordance with Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets (Issue Paper No. 5) to determine whether there is an impairment. This two step process is set forth below:

   1. Bills receivable shall be accounted for as a nonadmitted asset if either of the following conditions are present:

      a. Past due installment: If any installment is past due, the entire bills receivable balance from that policy is nonadmitted; or

      b. Aggregate bills receivable balance due in excess of the unearned premium on the policy for which the note was accepted: If the aggregate bills receivable balance due exceeds the policy's unearned premium, the amount in excess of the unearned premium is nonadmitted.

3. Amounts determined to be uncollectible shall be written off: If, in accordance with Issue Paper No. 5, it is probable a portion of the bills receivable is uncollectible, any uncollectible bills receivable shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible, disclosure requirements outlined in Issue Paper No. 5 shall be followed.
4. The following shall provide additional guidance in determining the nonadmitted portion of bills receivable:

   a. Amounts classified as nonadmitted assets collected subsequent to the date of the statutory financial statements - Such amounts shall not be used to decrease the nonadmitted asset otherwise calculated.

   b. Determination of the Due Date - The due date is governed by the contractual due date of the installment.

DISCUSSION:

5. The Statement of Concepts states:

   The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

6. Based upon the above concept, bills receivable should reflect only amounts that are available to meet both current and future policyholder obligations when the obligations are due. Therefore, amounts determined to be impaired (i.e., uncollectible), regardless of aging, should be charged to operations in the period such determination is made.

7. Under the conservatism concept of statutory accounting and consistent with current statutory accounting guidance, the entire bill receivable is nonadmitted if the related premium installment is past due. In addition, any excess of the aggregate bill receivable over the unearned premium amount on the policy of any performing bill receivable is nonadmitted. In accordance with the concept of conservatism, subsequent collection of nonadmitted assets should not be considered in the determining period-end nonadmitted assets. These recoveries should be accounted for in the period received.

Drafting Notes/Comments

- Accounting/aging of retrospective premiums currently reported on line 9.2 or line 9.3 is addressed in a separate issue paper.
- Accounting for uncollected agents' balances is addressed in Issue Paper No. 6 - Amounts Due From Agents and Brokers.
- A separate issue paper addresses unearned and unbilled premiums.
- Accounting for uncollected premium balances is addressed in Issue Paper No. 10 - Uncollected Premium Balances.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

8. Chapter 8, *Other Admitted Assets*, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies discusses bills receivable as follows:
(g) Bills receivable taken for premiums are admitted assets provided that the current installment is not past due, and the balance due does not exceed the unearned premium on the policy for which the note was accepted.

9. Chapter 9, Nonadmitted Assets, of the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies discusses bills receivable as follows:

6. Bills Receivable, Taken for Premiums: Bills or notes receivable are used as methods of financing premiums usually in states where installment premiums are not permitted or customary. If any portion of a bill or note receivable is unpaid past the due date of an installment, the entire bill or note is classified as nonadmitted. Also, on bills or notes not past due, the excess of the balance due over the unearned premium on the underlying policy or policies is classified as a nonadmitted asset. To the extent bills receivable are taken for premium for retrospectively rated policies, such bills must meet the same criteria required of accrued retrospective premiums to be reported as an admitted asset.

Generally Accepted Accounting Principles
10. GAAP addresses collectibility issues related to bills receivable in FASB Statement No. 5, Accounting for Contingencies (FAS 5), paragraphs 1, 3 and 8:

1. For the purpose of this Statement (FAS 5), a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a "gain contingency") or loss\(^1\) (hereinafter a "loss contingency") to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.

---
\(^1\)The term loss is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.
---

3. When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms probable, reasonably possible, and remote to identify three areas within that range, as follows:

a) Probable. The future event or events are likely to occur.

b) Reasonably possible. The chance of the future event or events occurring is more than remote but less than likely.

c) Remote. The chance of the future event or events occurring is slight.

8. An estimated loss from a loss contingency (as defined in paragraph 1) shall be accrued by a charge to income\(^3\) if both of the following conditions are met:

a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the
financial statements. It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.

b) The amount of loss can be reasonably estimated.

---

\(^3\)Paragraphs 23-24 of APB Opinion No. 9, Reporting the Results of Operations, describe the rare circumstances in which a prior period adjustment is appropriate. Those paragraphs are not amended by this Statement.

\(^4\)Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

11. The FAS 5 criteria above is used in interpreting information such as historical trending and general information about the financial condition of the insureds in an effort to evaluate the collectibility of a receivable balance. Accounting for contingencies is discussed in more detail in Issue Paper No. 5.

Statutory Issue Paper No. 22

Title:
Leases

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory accounting guidance provides only limited guidance on the accounting for leases and does not clearly differentiate capital and financing leases from operating leases. The Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies state that the form of lease agreements should determine the accounting. However, the manuals also state that lease-purchase transactions should be accounted for in accordance with their substance. Both sections state that GAAP is commonly used as a guideline where not in conflict with statutory accounting principles. This guidance generally has been interpreted to prescribe operating lease treatment for all leases, but to allow sales-type lease treatment by lessors if the criteria established in GAAP are met.

2. The purpose of this issue paper is to establish statutory accounting principles for leases by lessors and lessees that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). It addresses:
   - Accounting and reporting by lessees
   - Accounting and reporting by lessors
   - Sale-leaseback transactions
   - Leveraged leases for lessors
   - Related party leases
   - Disclosures

SUMMARY CONCLUSION:

3. For purposes of statutory accounting principles, a lease is defined as an agreement conveying the right to use property, plant, or equipment (land and/or depreciable assets) usually for a stated period of time. This definition does not include agreements that are contracts for services that do not transfer the right to use property, plant, or equipment from one contracting party to the other (i.e., employee lease contracts). On the other hand, agreements that do transfer the right to use property, plant, or equipment meet the definition of a lease for purposes of statutory accounting principles even though substantial services by the contractor (lessor) may be called for in connection with the operation or maintenance of such assets.

Accounting and Reporting by Lessees
4. All leases shall be considered operating leases. Rent on an operating lease shall be charged to expense over the lease term as it becomes payable, except as provided in paragraphs 5 and 6.
5. As discussed in FASB Technical Bulletin 85-3, *Accounting for Operating Leases with Scheduled Rent Increases*, the effects of scheduled rent increases normally shall be recognized on a straight-line basis over the lease term.

6. Lease agreements may also include incentives for the lessee to sign the lease, such as an up-front cash payment to the lessee, payment of costs for the lessee (such as moving expenses), or the assumption by the lessor of the lessee’s preexisting lease. As discussed in FASB Technical Bulletin 88-1, *Issues Relating to Accounting for Leases: Time Pattern of the Physical Use of the Property in an Operating Lease; Lease Incentives in an Operating Lease; Applicability of Leveraged Lease Accounting to Existing Assets of the Lessor; Money-Over-Money Lease Transactions; Wrap Lease Transactions*, incentives paid to or payments made on behalf of the lessee shall be considered reductions of minimum lease payments (i.e., the payments that the lessee is obligated to make or can be required to make in connection with the leased properties.) These incentives shall be recognized over the lease term on a straight-line basis unless the use of another systematic and rational allocation basis is more representative of the time pattern in which the leased property is physically employed. (The lessee's immediate recognition of expenses or losses (e.g., moving costs, losses on subleases, write-offs of leasehold improvements) shall not be changed by this guidance.)

**Accounting and Reporting by Lessors**

7. All leases, except leveraged leases as defined in paragraph 14, shall be considered operating leases and accounted for by the lessor as follows:

   a. The leased property shall be included in the same balance sheet category it would be had the property not been leased. The property shall be depreciated following the lessor's normal depreciation policies for such assets.

   b. Rental income shall be reported as investment income as it becomes receivable according to the provisions of the lease. However, as discussed in paragraphs 5 and 6 of this issue paper, rentals may be recognized before they become due, if rentals vary from the straight-line basis. The guidance in Issue Paper No. 34 - Investment Income Due and Accrued shall be applied to the receivable balance.

   c. Initial direct costs shall be charged to expense when incurred, and shall not be deferred and allocated over the lease term. Initial direct costs are those incremental costs that the lessor has incurred in directly evaluating, negotiating, administering, and closing a lease transaction.

8. The sale of property subject to an operating lease, or of property that is leased by or intended to be leased by the third-party purchaser to another party, shall not be treated as a sale if the seller or any party related to the seller (related party is defined in Issue Paper No. 25 - Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties, (Issue Paper No. 25)) retains substantial risks of ownership in the leased property.

**Sale-Leaseback Transactions**

9. Sale-leaseback transactions involve the sale of property, plant, or equipment by the owner and a lease of the asset back to the seller. Sale-leaseback accounting, whereby the seller-lessee records the sale, removes the assets and related liabilities from its balance sheet, and accounts for the lease in accordance with the guidance in paragraphs 4-6 of this issue paper, shall be used by the seller-lessee for sale-leaseback transactions only if the transaction includes all of the following:

   a. A normal leaseback (see paragraph 11)
b. Payment terms and provisions that adequately demonstrate the buyer-lessee's initial and continuing investment in the property (see paragraph 12)

c. Payment terms and provisions that transfer all of the other risks and rewards of ownership as demonstrated by the absence of any other continuing involvement by the seller-lessee (see paragraph 12)

d. Admitted assets, if the buyer-lessee is a related party, or either admitted or nonadmitted assets if the buyer-lessee is not a related party. For purposes of this paragraph, related parties include those identified in Issue Paper No. 25 and entities created for the purpose of buying and leasing nonadmitted assets for the reporting entity and/or its affiliates.

When applying sale-leaseback accounting, the sale, and gains or losses thereon, shall be recognized in accordance with the relevant statutory guidance for the asset being sold. For example, sales of real estate shall be accounted for in accordance with Issue Paper No. 40 - Real Estate Investments (Issue Paper No. 40), which adopts FASB Statement No. 66, Accounting for Sales of Real Estate (FAS 66).

10. If criteria a., b., or c. in paragraph 9 are not met the sale of the asset shall be accounted for as a financing or deposit in accordance with FAS 66, which was adopted in Issue Paper No. 40. If criteria 9 d. is not met, the deposit method shall be used. Under the deposit method, the seller recognizes no profit or loss on the sale, does not record notes receivable, continues to report in its financial statements the property and the related existing debt even if it has been assumed by the buyer. Lease payments decrease and collections on the buyer-lessee's note, if any, increase the seller-lessee's deposit account. The property and related debt continue to be in the seller-lessee's balance sheet, and the seller-lessee continues to depreciate the property. Also, a loss shall be recognized by the seller-lessee, if, at any reporting date, the net admitted value of the leased asset exceeds the sum of the balance in the deposit account, the fair value of the unrecorded note receivable, and any debt assumed by the buyer. Under the financing method, the asset will continue to be carried as an admitted asset. The proceeds from the sale are recognized as a borrowing (liability) and equated to the present value of the leaseback rents to determine the interest rate to use to accrue interest on the debt. If there is a change in lease terms such that the sale-leaseback transaction subsequently qualifies for sale-leaseback accounting recognition, sale-leaseback accounting as described in paragraph 9 shall be applied as if the sale had been recognized at the inception of the lease. Otherwise at the end of the lease term any deferred profit shall be recognized.

11. A normal leaseback in the context of a real estate sale-leaseback shall be defined as a lessee-lessee relationship that involves the active use of the property by the seller-lessee in consideration for payment of rent, including contingent rentals that are based on the future operations of the seller-lessee, and excludes other continuing involvement provisions.

12. A continuing involvement provision shall be defined as involvement by the seller-lessee with the leased property that result in the seller-lessee not transferring the risks or rewards of ownership to the buyer-lessee. Examples of continuing involvement are as follows:

a. The seller-lessee has an obligation or an option to repurchase the property or the buyer-lessee can compel the seller-lessee to repurchase the property.

b. The seller-lessee guarantees the buyer-lessee's investment or a return on that investment for a limited or extended period of time.
c. The seller-lessee is required to pay the buyer-lessee at the end of the lease term for a decline in the fair value of the property below the estimated residual value on some basis other than excess wear and tear of the property levied on inspection of the property at the termination of the lease.

d. The seller-lessee provides nonrecourse financing to the buyer-lessee for any portion of the sales proceeds or provides recourse financing in which the only recourse is to the leased asset.

e. The seller-lessee is not relieved of the obligation under any existing debt related to the property.

f. The seller-lessee provides collateral on behalf of the buyer-lessee other than the property directly involved in the sale-leaseback transaction, the seller-lessee or a related party to the seller-lessee guarantees the buyer-lessee's debt, or a related party to the seller-lessee guarantees a return of or on the buyer-lessee's investment.

g. The seller-lessee's rental payment is contingent on some predetermined or determinable level of future operations of the buyer-lessee.

h. The buyer-lessee is obligated to share with the seller-lessee any portion of the appreciation of the property.

13. The buyer-lessee shall account for the purchase in accordance with applicable statutory guidance for the asset acquired and lease in accordance with paragraphs 7-8 of this issue paper.

**Leveraged Leases for Lessors**

14. Generally, leveraged leases are those in which the lessor acquires, through the incurrence of debt (such that the lessor is substantially “leveraged” in the transaction), property, plant or equipment with the intentions to lease the asset(s) to the lessee. Leveraged leases shall be defined as those leases that meet the criteria set forth in paragraph 42 a-d (and the related paragraphs to which 42 refers) of FASB Statement No. 13, *Accounting for Leases* (FAS 13) as amended and interpreted. Leases which meet the preceding definition shall be accounted for in accordance with paragraphs 43-47 (and the related paragraphs to which 43-47 refer) of FAS 13. The lessor shall record its investment net of the nonrecourse debt. In cases where the asset being leased is a nonadmitted asset, any net leveraged lease asset shall be nonadmitted.

**Related-Party Leases**

15. This issue paper applies to arms-length transactions. To the extent that leases between related parties are, in substance, arms-length transactions the guidance in this issue paper shall be applied. The determination of whether related party leases qualify as arms length transactions will be addressed in Issue Paper No. 25.

**Disclosures**

16. The following disclosures shall be made in the notes to the financial statements of lessees:

- A general description of the lessee’s leasing arrangements including, but not limited to, the following:
(1) Rental expense for each period for which an income statement is presented, with separate amounts for minimum rentals, contingent rentals, and sublease rentals. Rental payments under leases with terms of a month or less that were not renewed need not be included.

(2) The basis on which contingent rental payments are determined.

(3) The existence and terms of renewal or purchase options and escalation clauses.

(4) Restrictions imposed by lease agreements, such as those concerning dividends, additional debt, and further leasing.

- Additionally, for leases having initial or remaining noncancelable lease terms in excess of one year:

  (1) Future minimum rental payments required as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding fiscal years.

  (2) The total of minimum rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

- For sale-leaseback transactions:

  (1) A description of the terms of the sale-leaseback transaction, including future commitments, obligations, provisions, or circumstances that require or result in the seller-lessee's continuing involvement.

  (2) For those accounted for as deposits, (a) the obligation for future minimum lease payments as of the date of the latest balance sheet presented in the aggregate and for each of the five succeeding fiscal years and (b) the total of minimum sublease rentals, if any, to be received in the future under noncancelable subleases in the aggregate and for each of the five succeeding years.

When leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the following information with respect to leases shall be disclosed in the financial statements:

- For operating leases:

  (1) The cost and carrying amount, if different, of property on lease or held for leasing by major classes of property according to nature or function, and the amount of accumulated depreciation in total as of the date of the latest balance sheet presented;

  (2) Minimum future rentals on noncancelable leases as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding years;

  (3) Total contingent rentals included in income for each period for which an income statement is presented; and

  (4) A general description of the lessor's leasing arrangements.

- For leveraged leases:

  (1)
(1) a description of the terms including the pretax income from the leveraged leases shall be disclosed in the notes to the financial statements. For purposes of presenting the investment in a leveraged lease in the lessor's balance sheet, the amount of related deferred taxes shall be presented separately (from the remainder of the net investment).

(2) In the notes to the financial statements, separate presentation (from each other) shall be made of pretax income from the leveraged lease, the tax effect of pretax income, and the amount of investment tax credit recognized as income during the period.

(3) When leveraged leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the components of the net investment balance in leveraged leases shall be disclosed in the notes to the financial statements.

DISCUSSION:

17. This issue paper provides more comprehensive guidance on accounting for leases than exists in the current statutory accounting literature. Nevertheless, the principles established are generally consistent with current statutory accounting principles.

18. This issue paper rejects FAS 13, as amended and interpreted, except for certain of the guidance on operating leases, sale-leaseback transactions and leveraged leases (i.e., paragraphs 15, 16(b, c, d), 19(a, b), 23(b, c), 36, 37, 38(b), 39(c) and, 42-47). A complete list of all FASB Statements, Interpretations and Technical Bulletins adopted and rejected by this issue paper is included in the Relevant GAAP Literature section of this paper. FAS 13 was rejected because this issue paper provides that all leases except for leveraged leases, are accounted for as operating leases, whereas the essence of FAS 13 is to classify and account for leases as either capital or operating.

19. The statutory accounting principles differ from GAAP as follows:

- All leases except for leveraged leases for lessors are accounted for as operating leases. Under GAAP, leases are treated as operating or capital by lessees and as operating, sales-type, direct financing or leveraged leases by lessors.

- No distinction is made between current and long term classifications on the balance sheet.

- Sale-leaseback transactions involving related parties and nonadmitted assets are accounted for by the seller-lessee as deposits.

20. In rejecting the FAS 13 guidance on capital and financing leases for all leases other than leveraged leases, the financial statement impact of classification and accounting for the different types of leases under GAAP was considered and is explained and described below for both lessees and lessors:

Lessee

Capital lease - A capital lease is reflected on the lessee's balance sheet as both an asset and a corresponding liability. A capital lease generally produces a declining income statement charge over the term of the lease, represented by the sum of amortization of the capitalized asset, usually straight-line, and a declining interest expense element on the lease obligation balance. The effect is similar to that which would result if the lessee borrowed money and purchased the asset outright instead of leasing it.
Operating lease - An operating lease does not result in an asset or liability being reflected on the lessee's balance sheet. An operating lease normally results in a level income statement charge over the term of the lease reflecting the rent payments required by the lease agreement.

Lessor

Direct financing lease - A direct financing lease is treated as in effect a loan, producing declining revenue similar to interest over the term of the lease. Under the accelerated pattern of revenue recognition provided by a direct financing lease, revenue declines relative to the lessor's declining investment and thus matches the pattern of the lessor's interest carrying costs, either explicit or implicit. The balance sheet effect of the accounting for a direct financing lease is that the lessor's asset is effectively converted from a property classification to a receivable (net investment in the lease).

Sales-type lease - In addition to the effects of the direct financing lease described above, in a sales-type lease the manufacturer or dealer records a sale and the related cost of sales and gross profit at the beginning of the lease. In the balance sheet the treatment converts leased property carried at manufacturing or wholesale cost to a receivable equal to the normal selling price (i.e., the price the asset would sell for in an arms-length transaction).

Leveraged Leases - Generally, leveraged leases are those in which the lessor acquires, through the incurrence of debt (such that the lessor is substantially “leveraged” in the transaction), property, plant or equipment with the intentions to lease the asset(s) to the lessee. Except for the exclusion of leveraged leases from the definition of a direct financing leases, it otherwise meets the definition of a direct financing lease. A leveraged lease involves at least three parties: the lessee, a long-term creditor, and a lessor. The long-term creditor provides financing, which is a significant percentage of the cost of the property, to the lessor which is nonrecourse as to the general credit of the lessor. The lessor’s investment in the property declines after the original investment has been made, often turns negative, and then increases during later years of the lease before it finally is realized. The lessor records the investment in a leveraged lease net of the nonrecourse debt. Income is recognized only in periods in which the net investment is positive.

Operating lease - An operating lease generally produces a level income effect over the term of the lease, represented by the excess of the level rent payments called for by the lease agreement over straight-line depreciation of the leased asset. (This level income from the lease would compare to a generally declining pattern of either explicit or implicit interest carrying costs.) Depreciable life would extend beyond the initial lease term. The rental income and depreciation are shown broad in the income statement as revenue and expense, respectively. For balance sheet purposes, the leased asset is classified with or near property, plant and equipment.

21. Since (a) statutory accounting principles provide for offsetting of obligations against real estate assets, (b) certain assets would be considered nonadmitted assets if capitalized, (c) most leases are considered operating leases under GAAP and (d) leasing is not a significant part of insurance companies business the objectives of statutory accounting would not be appreciably enhanced by adopting the GAAP guidance.

22. In addition, the statutory accounting principles established in this issue paper provide for the deferral of any gains on sales of property with a leaseback, except if certain strict criteria are met. Such accounting meets the conservatism objective in the Statement of Concepts. Furthermore, the statutory accounting principles established for sale-leaseback transactions of nonadmitted assets with related
parties meet the conservatism objective by eliminating the possibility of surplus enhancement through sale-leaseback transactions involving nonadmitted assets.

**Drafting Notes/Comments**
- Accounting for real estate, including sales of real estate, is addressed in Issue Paper No. 40 - Real Estate Investments.
- Accounting for related party transactions is addressed in Issue Paper No. 25, Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties.
- Issue Paper No. 34 - Investment Income Due and Accrued allows investment income not yet due to be considered an admitted asset. Under this issue paper rental income may be recognized before it is due.

**RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE**

**Statutory Accounting**
23. Chapter 8 of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies discusses accounting for leases as follows:

**Investments in Real Estate, Equipment and Other Assets Involving Leases**

The statutory method of accounting for lease and sale leaseback arrangements is governed largely by the form of the agreement to which the insurance company is party. Life insurance companies are encouraged to account for lease purchase transactions with the same objectives in mind as in accounting for all transactions, conservatism and policyholder protection. Financial Accounting Standards Board Statements 13, 28, and 66 are commonly used as guidelines where not in conflict with statutory accounting principles.

24. The accounting treatment as stated in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies is similar to the treatment stated in the preceding paragraph.

25. In the August 5, 1987 meeting of the Emerging Accounting Issues Working Group, a consensus was reached as to the accounting for free rent. The minutes read as follows:

**Accounting for Free Rent**

The recent soft real estate market has given rise to the unusual situation of new tenants receiving "free rent" during initial periods of tenancy. An insurer requested direction as to the appropriate statutory accounting treatment during the term of the lease.

Two alternatives were considered by the working group:

1. A "cash basis" method reflecting no payments during the "free rent" period and then accounting for the monthly rentals as payments are made.

2. A method based on GAAP treatment which would require the spreading of the actual rent to be paid over the full lease period. The "free rent" period would reflect monthly rent expense on an accrual basis. The accrued rent liability would increase during the "free rent" period and be reduced monthly with the cash payment of rent after the initial period.

The working group concluded that the second method was preferable.
26. The Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force discussed the issue of a sale and leaseback of home office buildings in their May 7, 1986 meeting. The minutes are as follows:

**Sale and Leaseback of Home Office Buildings**

The third area of discussion was the sale and leaseback of home office buildings where notes are taken back as part of the purchase price and the result is an increase to the insurers surplus through recognition of gain on the sale.

The issues discussed and the consensus reached were:

1. Should FASB 66 be applicable for statutory purposes?

2. Is there a need for special statutory accounting direction or should each situation be treated individually?

Present statutory accounting probably permits recognition of the gain. The group believes, however, that FASB 66 should be used for guidance by regulators, if not contrary to law, and, at a commissioner's discretion.

27. The Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force discussed the issue of a sale and leaseback of furniture and equipment in their September 11, 1989 meeting. The minutes are as follows:

**Accounting for Sale and Leaseback of Furniture and Equipment**

Mr. Robert Solitro, Director of Examinations for the State of New Hampshire Insurance Department, had requested that this item be placed on the agenda of the working group. His request included an issue summary (Attachment A).

In the situation described, an insurance company would enter into a sale and lease-back agreement with a third party, non-affiliate, in which nonadmitted furniture is sold and then lease-back. As described, the terms of the agreement would provide that future payments to be made by the insurance company would be equal to or greater than the proceeds to be received from the original sale.

The issue identified and addressed by the working group at this meeting was as follows:

Should the transaction be accounted for as an operating lease or a capital lease?

The working group reached the consensus that for sale and leaseback transactions involving furniture and non-EDP equipment guidance should be obtained from FASB No. 13 and related amendments. In a case where it is determined that the transaction results in a capital lease, no surplus enhancement should be recorded.

28. The Emerging Accounting Issues Working Group of the Accounting Practices and Procedures (EX4) Task Force discussed the issue of capital gains and increased real estate valuation through sale-leaseback and repurchase transactions in their December 4, 1989 meeting. The minutes are as follows:

**Capital Gains and Increased Real Estate Valuation Through Sale-Leaseback and Repurchase Transactions**
This topic was raised by Hyrum Gentner, Chief Insurance Examiner of the Utah Insurance Department and John Kay, Senior Examiner in that department (Attachment G). The situation described involved the sale and lease-back of an insurer's real estate with the insurer accepting a note for most of the proceeds of the sale. The lease-back was for 12 months with an option for an additional 19 years. The insurer paid for an option to repurchase the property. A significant gain was realized on the sale. The insurer repurchased the property and used the repurchase cost plus the cost of the repurchase option to determine the book value of the real estate. The result was an increased valuation, slightly less than the realized capital gain on the sale.

Mr. Gentner and Mr. Kay had also indicated that the Utah Department had been faced with three alternatives: (1) to recognize the gain and increased asset valuation, (2) to not recognize the gain and increased asset valuation, and (3) to recognize both and make full disclosure including a comment expressing the Insurance Department concern regarding the nature of the transactions. In connection with the last option, regulations would then be implemented requiring prior written departmental approval for such transactions and specifying the Commissioners authority to establish investment valuation reserves.

After a general discussion of the subject, Norris Clark, chair of the working group was authorized to respond to the Utah Insurance Department stating that the issue had been discussed at the January 22, 1986 (86-1) and May 7, 1986 (86-3) meetings of the working group and that the transactions discussed by Mr. Gentner and Mr. Kay appeared to be of the kind in which no gain should be recognized.

**Generally Accepted Accounting Principles**

29. Accounting for leases is governed by FASB Statement No. 13, *Accounting for Leases*, as amended and interpreted by incorporating FASB Statements, Interpretations, and Technical Bulletins. Some key paragraphs of the FASB Current Text, Section LI0, Leases, follow (note that the Current Text is an integration of currently effective accounting and reporting standards and that the authority of the Current Text is derived from the underlying pronouncements, which remain in force):

.102 For purposes of applying the accounting and reporting standards [herein], leases are classified as follows:

a. Classifications from the standpoint of the lessee:
   (1) Capital leases. Leases that meet one or more of the criteria in paragraph .103.
   (2) Operating leases. All other leases.

b. Classifications from the standpoint of the lessor: [FAS 13, ¶6]
   (1) Sales-type leases. Leases that give rise to manufacturer's or dealer's profit (or loss) to the lessor (that is, the fair value of the leased property at the inception of the lease is greater or less than its cost or carrying amount, if different) and that meet one or more of the criteria in paragraph .103 and both of the criteria in paragraph .104, except as indicated in the following sentence. A lease involving real estate shall be classified as a sales-type lease only if it meets the criterion in paragraph .103(a), in which case the criteria in paragraph .104 do not apply. [FAS 98, ¶22c] Normally, sales-type leases will arise when manufacturers or dealers use leasing as a means of marketing their products. Leases involving lessors that are primarily engaged in financing operations normally will not be sales-type leases if they qualify under paragraphs .103 and .104, but will most often be direct financing leases, described in paragraph .102(b)(2) below. However, a lessor need not be a dealer to realize dealer's profit (or loss) on a transaction, for example, if a lessor, not a dealer, leases an asset that at the inception of the lease has a fair value that is greater or less than its cost or carrying amount, if different, such a transaction is a sales-type lease, assuming the criteria referred to are met. [FAS13, ¶6] Leases of a manufacturing company's equipment sold to a leasing subsidiary that are accounted for as direct financing leases on the subsidiary's financial statements normally would be
sales-type capital leases in the consolidated financial statements. [FAS94, ¶52] A renewal or extension of an existing sales-type or direct financing lease that otherwise qualifies as a sales-type lease shall be classified as a direct financing lease unless the renewal or extension occurs at or near the end of the original term 3 specified in the existing lease, in which case it shall be classified as a sales-type lease (refer to paragraph .113(f)). [FAS27, ¶6]

(2) Direct financing leases. Leases other than leveraged leases that do not give rise to manufacturer's or dealer's profit (or loss) to the lessor but that meet one or more of the criteria in paragraph .103 and both of the criteria in paragraph .104. In such leases, the cost or carrying amount, if different, and fair value of the leased property are the same at the inception of the lease. [FAS13, ¶6] An exception arises when an existing sales-type or direct financing lease is renewed or extended during the term of the existing lease. [FAS27, ¶7] In such cases, the fact that the carrying amount of the property at the end of the original lease term is different from its fair value at that date shall not preclude the classification of the renewal or extension as a direct financing lease (refer to paragraph .113(f)).

(3) Leveraged leases. Leases that meet the criteria of paragraph .144. [FAS13, ¶6]

(4) Operating leases. All other leases, including leases that involve real estate and give rise to manufacturer's or dealer's profit (or loss) to the lessor but do not meet the criterion in paragraph .103(a). [FAS98, ¶22d] Criteria for Classifying Leases (Other Than Leveraged Leases)

.103 The criteria for classifying leases set forth in this paragraph and in paragraph .104 derive from the concept [FAS 13, paragraph 7] that a lease that transfers substantially all of the benefits and risks incident to the ownership of property should be accounted for as the acquisition of an asset and the incurrence of an obligation by the lessee and as a sale or financing by the lessor. All other leases should be accounted for as operating leases. In a lease that transfers substantially all of the benefits and risks of ownership, the economic effect on the parties is similar, in many respects, to that of an installment purchase. [FAS 13, paragraph 60] If at its inception a lease meets one or more of the following four criteria, the lease shall be classified as a capital lease by the lessee. Otherwise, it shall be classified as an operating lease. (Refer to paragraph .150 and Exhibit 150C for an illustration of the application of these criteria.)

a. The lease transfers ownership of the property to the lessee by the end of the lease term.⁴a
b. The lease contains a bargain purchase option.

The lease term is equal to 75 percent or more of the estimated economic life of the leased property. However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease.

c. The present value⁵ at the beginning of the lease term of the minimum lease payments, excluding that portion of the payments representing executory costs, to be paid by the lessee, including any profit thereon, equals or exceeds 90 percent of the excess of the fair value of the leased property to the lessor at the inception of the lease over any related investment tax credit retained by the lessor and expected to be realized by him.⁶ However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease. A lessor shall compute the present value of the minimum lease payments using the interest rate implicit in the lease. A lessee shall compute the present value of the minimum lease payments using its incremental borrowing rate unless (1) it is practicable for him to learn the implicit rate computed by the lessor and (2) the implicit rate computed by the lessor is less than the lessee's incremental borrowing rate. If both of those conditions are met, the lessee shall use the implicit rate. [FAS 13, paragraph 7]
4a This criterion is met in situations in which the lease agreement provides for the transfer of title at or shortly after the end of the lease term in exchange for the payment of a nominal fee, for example, the minimum required by statutory regulation to transfer title. [FAS 98, paragraph 22e]

5 Refer to paragraphs .509 through .511 for supplemental guidance on the interest rate to be used in calculating the present value of minimum lease payments.

6 The 90-percent test is stated as a lower limit rather than as a guideline. [FIN 19, paragraph 4]

.104 From the standpoint of the lessor, a lease involving real estate shall be classified as a sales-type lease only if it meets the criterion in paragraph .103(a) as appropriate under paragraph .102(b)(1). Otherwise, if the lease at inception meets any one of the four criteria in paragraph .103 and in addition meets both of the following criteria, it shall be classified as a sales-type lease, a direct financing lease, a leveraged lease, or an operating lease as appropriate under paragraph .102(b). If the lease does not meet any of the criteria of paragraph .103 or both of the following criteria, the lease shall be classified as an operating lease.

a. Collectibility of the minimum lease payments is reasonably predictable. A lessor shall not be precluded from classifying a lease as a sales-type lease, a direct financing lease, or a leveraged lease simply because the receivable is subject to an estimate of uncollectibility based on experience with groups of similar receivables. [FAS98, ¶22f]

b. No important uncertainties surround the amount of unreimbursable costs yet to be incurred by the lessor under the lease. 7 Important uncertainties might include commitments by the lessor to guarantee performance of the leased property in a manner more extensive than the typical product warranty or to effectively protect the lessee from obsolescence of the leased property. However, the necessity of estimating executory costs to be paid by the lessor (refer to paragraphs .113(a) and .114(a)) shall not by itself constitute an important uncertainty as referred to herein. [FAS13, ¶8]

7 If the property covered by the lease is yet to be constructed or has not been acquired by the lessor at the inception of the lease, the classification criteria of paragraph .104(b) shall be applied at the date that construction of the property is completed or the property is acquired by the lessor. [FAS23, ¶ 7]

.105 If at any time the lessee and lessor agree to change the provisions of the lease, other than by renewing the lease or extending its term, in a manner that would have resulted in a different classification of the lease under the criteria in paragraphs .103 and .104 had the changed terms been in effect at the inception of the lease, the revised agreement shall be considered as a new agreement over its term, and the criteria in paragraphs .103 and .104 shall be applied for purposes of classifying the new lease. Likewise, except when a guarantee or penalty is rendered inoperative as described in paragraphs .108 and .113(e), any action that extends the lease beyond the expiration of the existing lease term, such as the exercise of a lease renewal option other than those already included in the lease term, shall be considered as a new agreement, which shall be classified according to the provisions of paragraphs .102 through .104. Changes in estimates (for example, changes in estimates of the economic life or of the residual value of the leased property) or changes in circumstances (for example, default by the lessee), however, shall not give rise to a new classification of a lease for accounting purposes. [FAS13, ¶9]
Accounting and Reporting by Lessees

Operating Leases

.111 Normally, rental on an operating lease shall be charged to expense over the lease term as it becomes payable. If rental payments are not made on a straight-line basis, \(^{13a}\) rental expense nevertheless shall be recognized on a straight-line basis unless another systematic and rational basis is more representative of the time pattern in which use benefit is derived from the leased property, in which case that basis shall be used. [FAS 13, paragraph 15]

\(^{13a}\) Refer to paragraphs .525 through .527F for supplemental guidance on accounting for operating leases with scheduled rent increases and lease incentives.

.112 The following information with respect to leases shall be disclosed in the lessee's financial statements or the footnotes thereto. (Refer to paragraphs .151 and .152 for illustrations.)

b. For operating leases having initial or remaining noncancelable lease terms in excess of one year:

(1) Future minimum rental payments required as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding fiscal years.

(2) The total of minimum rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

c. For all operating leases, rental expense for each period for which an income statement is presented, with separate amounts for minimum rentals, contingent rentals, and sublease rentals. Rental payments under leases with terms of a month or less that were not renewed need not be included.

d. A general description of the lessee's leasing arrangements including, but not limited to, the following:

(1) The basis on which contingent rental payments are determined.

(2) The existence and terms of renewal or purchase options and escalation clauses.

(3) Restrictions imposed by lease agreements, such as those concerning dividends, additional debt, and further leasing. [FAS 13, paragraph 16]

Sales-Type Leases

.113 Sales-type leases shall be accounted for by the lessor as follows:

a. The minimum lease payments (net of amounts, if any, included therein with respect to executory costs to be paid by the lessor, together with any profit thereon) plus the unguaranteed residual value accruing to the benefit of the lessor shall be recorded as the gross investment in the lease.\(^{13b}\) [FAS13, ¶17] The estimated residual value used to compute the unguaranteed residual value accruing to the benefit of the lessor shall not exceed the amount estimated at the inception of the lease.\(^4\) [FAS23, ¶9] However, if the sales-type lease involves real estate, the lessor shall account for the transaction under the provisions of Section R10, "Real Estate," in the same manner as a seller of the same property. [FAS98, ¶22g]
Paragraphs .536 and .537 further discuss residual value retained by a lessor that sells rental payment.

If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or preacquisition period, the effect of any increases that have occurred shall be considered in the determination of "the estimated residual value of the leased property at the inception of the lease" for purposes of the paragraph. [FAS23, ¶9]

b. The difference between the gross investment in the lease in (a) above and the sum of the present values of the two components of the gross investment shall be recorded as unearned income. The discount rate to be used in determining the present values shall be the interest rate implicit in the lease. The net investment in the lease shall consist of the gross investment less the unearned income. The unearned income shall be amortized to income over the lease term so as to produce a constant periodic rate of return on the net investment in the lease. However, other methods of income recognition may be used if the results obtained are not materially different from those which would result from the prescribed method. The net investment in the lease shall be subject to the same considerations as other assets in classification as current or noncurrent assets in a classified balance sheet. [FAS13, ¶17] Contingent rentals shall be included in the determination of income as accruable. [FAS29, ¶13] [(Refer to paragraph .165 for an illustration involving contingent rentals.)]

15 This is the interest method described in Section 169, paragraph .108 and footnote 4. [FAS13, ¶12, fn 11]

c. The present value of the minimum lease payments (net of executory costs, including any profit thereon), computed at the interest rate implicit in the lease, shall be recorded as the sales price. The cost or carrying amount, if different, of the leased property, plus any initial direct costs, less the present value of the unguaranteed residual value accruing to the benefit of the lessor, computed at the interest rate implicit in the lease, shall be charged against income in the same period.

d. The estimated residual value shall be reviewed at least annually. If the review results in a lower estimate than had been previously established, a determination must be made as to whether the decline in estimated residual value is other than temporary. If the decline in estimated residual value is judged to be other than temporary, the accounting for the transaction shall be revised using the changed estimate. The resulting reduction in the net investment shall be recognized as a loss in the period in which the estimate is changed. An upward adjustment of the estimated residual value shall not be made.

16 Paragraphs .514 through .517 discuss upward adjustment of guaranteed residential values.

e. In leases containing a residual guarantee or a penalty for failure to renew the lease at the end of the lease term, following the method of amortization described in (b) above will result in a balance of minimum lease payments receivable at the end of the lease term that will equal the amount of the guarantee or penalty at that date. In the event that a renewal or other extension of the lease term renders the guarantee or penalty inoperative, the existing balances of the minimum lease payments receivable and the estimated residual value shall be adjusted for the changes resulting from the revised agreement (subject to the limitation on the residual value imposed by subparagraph (d) above) and the net adjustment shall be charged or credited to unearned income. [FAS13, ¶17]
Residual guarantees and termination penalties that serve to extend the lease term are excluded from minimum lease payments and are thus distinguished from those guarantees and penalties referred to in this paragraph. [FAS13, ¶17 fn 17]

f. Except for a change in the provisions of a lease that results from a refunding by the lessor of tax-exempt debt, including an advance refunding, in which the perceived economic advantages of the refunding are passed through to the lessee by a change in the provisions of the lease agreement and the revised agreement is classified as a direct financing lease (refer to paragraph .110), a change in the provisions of a lease, a renewal or extension of an existing lease, and a termination of a lease prior to the expiration of the lease term shall be accounted for as follows: [FAS22, ¶15]

(1) If the provisions of a lease are changed in a way that changes the amount of the remaining minimum lease payments and the change either (a) does not give rise to a new agreement under the provisions of paragraph .105 or (b) does give rise to a new agreement but such agreement is classified as a direct financing lease, the balance of the minimum lease payments receivable and the estimated residual value, if affected, shall be adjusted to reflect the change (subject to the limitation on the residual value imposed by subparagraph (d) above), and the net adjustment shall be charged or credited to unearned income. If the change in the lease provisions gives rise to a new agreement classified as an operating lease, the remaining net investment shall be removed from the accounts, the leased asset shall be recorded as an asset at the lower of its original cost, present fair value, or present carrying amount, and the net adjustment shall be charged to income of the period. The new lease shall thereafter be accounted for as any other operating lease.

(2) Except when a guarantee or penalty is rendered inoperative as described in subparagraph (e) above, a renewal or an extension of an existing lease shall be accounted for as follows:
(a) If the renewal or extension is classified as a direct financing lease, it shall be accounted for as described in subparagraph (f)(1) above.
(b) If the renewal or extension is classified as an operating lease, the existing lease shall continue to be accounted for as a sales-type lease to the end of its original term, and the renewal or extension shall be accounted for as any other operating lease. [FAS13, ¶17]
(c) If a renewal or extension that occurs at or near the end of the term of the existing lease is classified as a sales-type lease, the renewal or extension shall be accounted for as a sales-type lease. [FAS27, ¶8]

(3) A termination of the lease shall be accounted for by removing the net investment from the accounts, recording the leased asset at the lower of its original cost, present fair value, or present carrying amount, and the net adjustment shall be charged to income of the period. [FAS13, ¶17]

18 A renewal or extension that occurs in the last few months of an existing lease is considered to have occurred at or near the end of the existing lease term. [FAS27, ¶8]

g. If prior to the expiration of the lease term a change in the provisions of a lease results from a refunding by the lessor of tax-exempt debt, including an advance refunding, in which the perceived economic advantages of the refunding are passed through to the lessee and the
revised agreement is classified as a direct financing lease by the lessor, the change shall be accounted for as follows: 20

(1) If a change in the provisions of a lease results from a refunding of tax-exempt debt, including an advance refunding that is accounted for as an early extinguishment of debt, the lessor shall adjust the balance of the minimum lease payments receivable and the estimated residual value, if affected (that is, the gross investment in the lease), in accordance with the requirements of paragraphs .114(c) and .113(f)(1). The adjustment of unearned income shall be the amount required to adjust the net investment in the lease to the sum of the present values of the two components of the gross investment based on the interest rate applicable to the revised lease agreement. The combined adjustment resulting from applying the two preceding sentences shall be recognized as a gain or loss in the current period. [Paragraphs .162 and .163 illustrate the accounting prescribed by this paragraph.]

(2) If a change in the provisions of the lease results from an advance refunding that is not accounted for as an early extinguishment of debt at the date of the advance refunding, the lessor shall systematically recognize, as revenue, any reimbursements to be received from the lessee for costs related to the debt to be refunded, such as unamortized discount or issue costs or a call premium, over the period from the date of the advance refunding to the call date of debt to be refunded. [FAS22, ¶12

---

19 An advance refunding involves the issuance of new debt to replace existing debt with the proceeds from the new debt placed in trust or otherwise restricted to retire the existing debt at a determinable future date or dates. [FAS22, ¶1, fn1] Section D14, “Debt: Extinguishments,” provides criteria for determining whether the advance refunding should be recognized as an extinguishment of the existing debt at the date of the advance refunding. FAS76, ¶10

20 This paragraph prescribes the accounting for a direct financing lease by governmental units that classify and account for leases of that kind [FAS22, ¶12, fn4]

---

Accounting and Reporting by Lessors

Operating Leases

.115. Operating leases shall be accounted for by the lessor as follows:

a. The leased property shall be included with or near property, plant, and equipment in the balance sheet. The property shall be depreciated following the lessor’s normal depreciation policy, and in the balance sheet the accumulated depreciation shall be deducted from the investment in the leased property.

b. Rent shall be reported as income over the lease term as it becomes receivable according to the provisions of the lease. However, if the rentals vary from a straight-line basis, the income shall be recognized on a straight-line basis unless another systematic and rational basis is more representative of the time pattern in which use benefit from the leased property is diminished, in which case that basis shall be used.

c. Initial direct costs shall be deferred and allocated over the lease term in proportion to the recognition of rental income. However, initial direct costs may be charged to expense as incurred if the effect is not materially different from that which would have resulted from the use of the method prescribed in the preceding sentence. [FAS 13, paragraph 19]
Leases

Refer to paragraphs .525 through .527F for supplemental guidance on accounting for operating leases with scheduled rent increases and lease incentives.

d. If, at the inception of the lease, the fair value of the property in an operating lease involving real estate that would have been classified as a sales-type lease except that it did not meet the criterion in paragraph .103(a) is less than its cost or carrying amount, if different, then a loss equal to that difference shall be recognized at the inception of the lease. [FAS 98, paragraph 22j]

Sale-Leaseback Transactions

.128 Sale-leaseback transactions involve the sale of property by the owner and a lease of the property back to the seller. A sale of property that is accompanied by a leaseback of all or any part of the property for all or part of its remaining economic life shall be accounted for by the seller-lessee in accordance with the provisions of paragraph .129 [except that a sale-leaseback involving real estate, property improvements, or integral equipment shall be accounted for in accordance with the provisions of paragraphs .130A through .130M]. A sale of property that is accompanied by a leaseback of all or any part of the property for all or part of its remaining economic life shall be accounted for by the buyer-lessee in accordance with the provisions of paragraph .130. [FAS28, paragraph 2] [See paragraphs .544 through .545 for supplemental guidance in accounting for sale-leaseback transactions when nonrecourse debt is obtained using the lease rentals or lease rentals and the leased asset as collateral and the nonrecourse debt is sold with the asset to a third party investor (a wrap lease transaction)].

The terms property improvements and integral equipment are discussed in paragraph .130A and footnote 32a.

.129 If the lease meets one of the criteria for treatment as a capital lease (refer to paragraph .103), the seller-lessee shall account for the lease as a capital lease; otherwise, as an operating lease. Any profit or loss on the sale shall be deferred and amortized in proportion to the amortization of the lease asset, if a capital lease, or in proportion to the related gross rental charged to expense over the lease term, if an operating lease, unless:

a. The seller-lessee relinquishes the right to substantially all of the remaining use of the property sold (retaining only a minor portion of such use), in which case the sale and the leaseback shall be accounted for as separate transactions based on their respective terms. However, if the amount of rentals called for by the lease is unreasonable under market conditions at the inception of the lease, an appropriate amount shall be deferred or accrued, by adjusting the profit or loss on the sale, and amortized as specified in the introduction of this paragraph to adjust those rentals to a reasonable amount.

Profit or loss on the sale is used in this paragraph to refer to the profit or loss that would be recognized on the sale if there were no leaseback. For example, on a sale of real estate subject to Section R10, the profit on the sale to be deferred and amortized in proportion to the leaseback would be the profit that could otherwise be recognized in accordance with that section. [FAS28, ¶3]

If the leased asset is land only, the amortization shall be on a straight-line basis over the lease term. [FAS13, ¶33, fn23]

Substantially all and minor are used here in the context of the concepts underlying the classification criteria of this section. In that context, a test based on the 90-percent recovery criterion of paragraph .103(d) could be used as a guideline; that is, if the present value of a reasonable amount of rental for the leaseback represents...
10 percent or less of the fair value of the asset sold, the seller-lessee could be presumed to have transferred to the [buyer-lessor] the right to substantially all of the remaining use of the property sold, and the seller-lessee could be presumed to have retained only a minor portion of such use. [FAS28, ¶3a]

b. The seller-lessee retains more than a minor part but less than substantially all of the use of the property through the leaseback and realizes a profit on the sale in excess of (1) the present value of the minimum lease payments over the lease term, if the leaseback is classified as an operating lease, or (2) the recorded amount of the leased asset, if the leaseback is classified as a capital lease. In that case, the profit on the sale in excess of either the present value of the minimum lease payments or the recorded amount of the leased asset, whichever is appropriate, shall be recognized at the date of the sale. For purposes of applying this provision, the present value of the minimum lease payments for an operating lease shall be computed using the interest rate that would be used to apply the 90 percent recovery criterion of paragraph .103(d).

c. If the lease meets the criteria in paragraphs .103 and .104, the [buyer-lessor] shall record the transaction as a purchase and a direct financing lease; otherwise, the [buyer-lessor] shall record the transaction as a purchase and an operating lease. [FAS 13, paragraph 34]
Sale-Leaseback Accounting

130B Sale-leaseback accounting is a method of accounting for a sale-leaseback transaction in which the seller-lessee records the sale, removes all property and related liabilities from its balance sheet, recognizes gain or loss from the sale in accordance with [paragraphs .129 and .130A through .130M] and Section R10, and classifies the leaseback in accordance with this section. [FAS98, paragraph 70]

Criteria for Sale-Leaseback Accounting

130C Sale-leaseback accounting shall be used by a seller-lessee only if a sale-leaseback transaction includes all of the following:

a. A normal leaseback as described in paragraph .130D
b. Payment terms and provisions that adequately demonstrate the buyer-lessee's initial and continuing investment in the property (refer to paragraphs .111 through .119 of Section R10)
c. Payment terms and provisions that transfer all of the other risks and rewards of ownership as demonstrated by the absence of any other continuing involvement by the seller-lessee described in paragraphs .130G through .130I of this section and paragraphs .128 through .142 and .144 through .146 of Section R10. [FAS98, paragraph 7]

.130D A normal leaseback is a lessee-lessee relationship that involves the active use of the property by the seller-lessee in consideration for payment of rent, including contingent rentals that are based on the future operations of the seller-lessee, and excludes other continuing involvement provisions or conditions described in paragraphs .130G through .130I of this section. The phrase active use of the property by the seller-lessee refers to the use of the property during the lease term in the seller-lessee's trade or business, provided that subleasing of the leased back property is minor. If the present value of a reasonable amount of rental for that portion of the leaseback that is subleased is not more than 10 percent of the fair value of the asset sold, the leased back property under sublease is considered minor. Active use of the property may involve the providing of services where the occupancy of the property is generally transient or short-term and is integral to the ancillary services being provided. Those ancillary services include, but are not limited to, housekeeping, inventory control, entertainment, bookkeeping, and food services. Thus, the use of property by a seller-lessee engaged in the hotel or bonded warehouse business or the operation of a golf course or a parking lot, for example, is considered active use. [FAS98, paragraph 8]

32c Paragraphs .130A through .130M distinguish between contingent rentals that are based on the future operations of the seller-lessee and those that are based on some predetermined or determinable level of future operations of the buyer-lessee. The latter type of contingent rental is addressed in paragraph .130H(e) of this section. [FAS98, ¶8, fn4]

32d The term minor is used here in the context of the definition in footnote 30 to paragraph .129. [FAS98, ¶8, fn6]

Terms of the Sale-Leaseback Transaction

130E Terms of the sale-leaseback transaction that are substantially different from terms that an independent third-party lessor or lessee would accept represent an exchange of some stated or unstated rights or privileges. Those rights or privileges shall be considered in evaluating the
continuing involvement provisions in paragraphs .130G through .130l of this section. Those terms or conditions include, but are not limited to, the sales price, the interest rate, and other terms of any loan from the seller-lessee to the buyer-lessee. The fair value of the property used in making that evaluation shall be based on objective evidence, for example, an independent third-party appraisal or recent sales of comparable property. [FAS98, ¶9]

Continuing Involvement

.130F A sale-leaseback transaction that does not qualify for sale-leaseback accounting because of any form of continuing involvement by the seller-lessee other than a normal leaseback shall be accounted for by the deposit method or as a financing, whichever is appropriate under Section R10. The provisions or conditions described in paragraphs .130G through .130l of this section are examples of continuing involvement for the purpose of applying paragraphs .130A through .130M. [FAS98, ¶10]

.130G Paragraphs .128 thorough .142 and .144 thorough .146 of Section R10 describe forms of continuing involvement by the seller-lessee with the leased property that result in the seller-lessee not transferring the risks or rewards of ownership to the buyer-lessee. Two examples of continuing involvement specified in those paragraphs that are frequently found in sale-leaseback transactions are provisions or conditions in which:

a. The seller-lessee has an obligation or an option \(^{32e}\) to repurchase the property or the buyer-lessee can compel the seller-lessee to repurchase the property.

b. The seller-lessee guarantees the buyer-lessee’s investment or a return on that investment for a limited or extended period of time. [FAS98, ¶11]

\(^{32e}\) A right of first refusal based on a bona fide offer by a third party ordinarily is not an obligation or an option to repurchase. An agreement that allows the seller-lessee to repurchase the asset in the event no third-party offer is made is an option to repurchase. [FAS98, ¶11, fn7]

.130H Other provisions or conditions that are guarantees and that do not transfer all of the risks of ownership shall constitute continuing involvement for the purpose of applying paragraphs .130A through .130M to sale-leaseback transactions and include, but are not limited to, the following:

a. The seller-lessee is required to pay the buyer-lessee at the end of the lease terms for a decline in the fair value of the property below the estimated residual value on some basis other than excess wear and tear of the property levied on inspection of the property at the termination of the lease.

b. The seller-lessee provides nonrecourse financing to the buyer-lessee for any portion of the sales proceeds or provides recourse financing in which the only recourse is to the leased asset.

c. The seller-lessee is not relieved of the obligation under any existing debt related to the property.

d. The seller-lessee provides collateral on behalf of the buyer-lessee other than the property directly involved in the sale-leaseback transaction, the seller-lessee or a related party to the seller-lessee guarantees the buyer-lessee’s debt, or a related party to the seller-lessee guarantees a return of or on the buyer-lessee’s investment.

e. The seller-lessee’s rental payment is contingent on some predetermined or determinable level of future operations of the buyer-lessee. \(^{32f}\) [FAS98, ¶12]
Leases

.130 Paragraphs .130A through .130M distinguish between contingent rentals that are based on the future operations of the seller-lessee and those that are based on some predetermined or determinable level of future operations of the buyer-lessee. [FAS98, ¶8, fn4]

.1301 The following provisions or conditions also shall be considered examples of continuing involvement for the purpose of applying paragraphs .130A through .130M to sale-leaseback transactions:

a. The seller-lessee enters into a sale-leaseback transaction involving property improvements or integral equipment without leasing the underlying land to the buyer-lessee.

b. The buyer-lessee is obligated to share with the seller-lessee any portion of the appreciation of the property.

c. Any other provision or circumstance that allows the seller-lessee to participate in any future profits of the buyer-lessee or the appreciation of the leased property, for example, a situation in which the seller-lessee owns or has an option to acquire any interest in the buyer-lessee. [FAS98, ¶13]

.130K In addition to the [other] disclosure requirements of this section and Section R10, the financial statements of a seller-lessee shall include a description of the terms of the sale-leaseback transaction, including future commitments, obligations, provisions, or circumstances that require or result in the seller-lessee's continuing involvement. [FAS98, ¶17]

.130L The financial statements of a seller-lessee that has accounted for a sale-leaseback transaction by the deposit method or as a financing according to the provisions of this section and Section R10 also shall disclose:

a. The obligation for future minimum lease payments as of the date of the latest balance sheet presented in the aggregate and for each of the five succeeding fiscal years.

b. The total of minimum sublease rentals, if any, to be received in the future under noncancelable subleases in the aggregate and for each of the five succeeding fiscal years. [FAS98, ¶18]
Accounting for and Reporting for Leveraged Leases

.143 From the standpoint of the lessee, leveraged leases shall be classified and accounted for in the same manner as nonleveraged leases. The balance of this section deals with leveraged leases from the standpoint of the lessor. [FAS13, paragraph 41]

.144 For the purposes of this section, a leveraged lease is defined as one having all the following characteristics:

a. Except for the exclusion of leveraged leases from the definition of a direct financing lease as set forth in paragraph .102(b)(2), it otherwise meets that definition. Leases that meet the definition of sales-type leases set forth in paragraph .102(b)(1) shall not be accounted for as leveraged leases but shall be accounted for as prescribed in paragraph .113.

b. It involves at least three parties: a lessee, a long-term creditor, and a lessor (commonly called an equity participant).

c. The financing provided by the long-term creditor is nonrecourse as to the general credit of the lessor (although the creditor may have recourse to the specific property leased and the unremitted rentals relating to it). The amount of financing is sufficient to provide the lessor with substantial leverage in the transaction.

d. The lessor's net investment, as defined in paragraph .145, declines during the early years once the investment has been completed and rises during the later years of the lease before its final elimination. Such decreases and increases in the net investment balance may occur more than once.

A lease meeting the preceding definition shall be accounted for by the lessor using the method prescribed in paragraphs .145 through .149. An exception arises if the investment tax credit is accounted for other than stated in paragraphs .145 and .146, in which case the lease shall be classified as a direct financing lease and accounted for in accordance with paragraph .114. A lease not meeting the definition of a leveraged lease shall be accounted for in accordance with its classification under paragraph .102(b). [FAS 13, ¶42]

[36a Paragraphs .536 and .537 further discuss residual value retained by a lessor that sells rental payments.]

37 It is recognized that the investment tax credit may be accounted for other than as prescribed here, as provided by Congress in the Revenue Act of 1971. [FAS13, ¶42, fn24]

.145 The lessor shall record its investment in a leveraged lease net of the nonrecourse debt. The net of the balances of the following accounts shall represent the initial and continuing investment in leveraged leases:

a. Rentals receivable, net of that portion of the rental applicable to principal and interest on the nonrecourse debt.

b. A receivable for the amount of investment tax credit to be realized on the transaction.

c. The estimated residual value of the lease asset. The estimated residual value shall not exceed the amount estimated at the inception of the lease except as provided in footnote 38.

d. Unearned and deferred income consisting of (1) the estimated pretax lease income (or loss), after deducting the initial direct costs, remaining to be allocated to income over the lease term and (2) the investment tax credit remaining to be allocated to income over the lease term.

[37a Footnote 502 further discusses nonrecourse debt collateralized by a lease receivable]

38 If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or preacquisition period, the effect of

IP 22–22
any increases that have occurred shall be considered in the determination of "the estimated residual value of the leased property at the inception of the lease" for purposes of this paragraph. [FAS23, ¶10]

The investment in leveraged leases less deferred taxes arising from differences between the pretax accounting income and taxable income shall represent the lessor's net investment in leveraged leases for purposes of computing periodic net income from the lease as described in paragraph .146. [FAS13, ¶43]

.146 Given the original investment and using the projected cash receipts and disbursements over the term of the lease, the rate of return on the net investment in the years 39 in which it is positive shall be computed. The rate is that rate which when applied to the net investment in the years in which the net investment is positive will distribute the net income to those years (refer to Exhibit 154C) and is distinct from the interest rate implicit in the lease. In each year whether positive or not, the difference between the net cash flow and the amount of income recognized, if any, shall serve to increase or reduce the net investment balance. The net income recognized shall be composed of three elements: two, pretax lease income (or loss) and investment tax credit, shall be allocated in proportionate amounts from the unearned and deferred income included in net investment, as described in paragraph .145; the third element is the tax effect of the pretax lease income (or loss) recognized, which shall be reflected in tax expense for the year. The tax effect of the difference between pretax accounting income (or loss) and taxable income (or loss) for the year shall be charged or credited to deferred taxes. The accounting prescribed in paragraph .145 and in this paragraph is illustrated in paragraph .154. [FAS13, ¶44]

39 The use of the term years is not intended to preclude application of the accounting prescribed in this paragraph to shorter accounting periods. [FAS13, ¶44, fn 25]

.147 If the projected net cash receipts 40 over the term of the lease are less than the lessor's initial investment, the deficiency shall be recognized as a loss at the inception of the lease. Likewise, if at any time during the lease term the application of the method prescribed in paragraphs .145 and .146 would result in a loss being allocated to future years, that loss shall be recognized immediately. This situation might arise in cases in which one of the important assumptions affecting net income is revised (refer to paragraph .148). [FAS13, ¶45]

40 For purposes of this paragraph, net cash shall be gross cash receipts less gross cash disbursements exclusive of the lessor's initial investment. [FAS13, ¶44, fn 26]

.148 Any estimated residual value and all other important assumptions affecting estimated total net income from the lease shall be reviewed at lease annually.41 If during the lease term the estimate of the residual value is determined to be excessive and the decline in the residual value is judged to be other than temporary or if the revision of another important assumption changes the estimated total net income from the lease, the rate of return and the allocation of income to positive investment years shall be recalculated from the inception of the lease following the method described in paragraph .146 and using the revised assumption. The accounts constituting the net investment balance shall be adjusted to conform to the recalculated balances, and the change in the net investment shall be recognized as a gain or loss in the year in which the assumption is changed. An upward adjustment of the estimated residual value shall not be made.41a The accounting prescribed in this paragraph is illustrated in paragraph .154. [FAS13, ¶46]

41 Refer to paragraphs .521 through .524 for supplemental guidance on the effect of a change in income tax rate on the accounting for leveraged leases.]
[\textsuperscript{41a} Paragraphs .536 and .537 further discuss residual value retained by a lessor that sells rental payments.]

Accounting for Income Taxes

.148A Section 127, "Income Taxes," does not change (a) the pattern of recognition of after-tax income for leveraged leases as required by this section or (b) the allocation of the purchase price in a purchase business combination to acquired leveraged leases as required by paragraphs .140 through .142. Integration\(\textsuperscript{[41b]}\) of the results of income tax accounting for leveraged leases with the other results of accounting for income taxes under Section 127 is required when deferred tax credits related to leveraged leases are the only source (refer to paragraph .120 of Section 127) for recognition of a tax benefit for deductible temporary differences and carryforwards not related to leveraged leases. A valuation allowance is not necessary if deductible temporary differences and carryforwards will offset taxable amounts from future recovery of the net investment in the leveraged lease. However, to the extent that the amount of deferred tax credits for a leveraged lease as determined under this section differs from the amount of the deferred tax liability related to the leveraged lease that would otherwise result from applying the requirements of Section 127, that difference is preserved and is not a source of taxable income for recognition of the tax benefit of deductible temporary differences and operating loss or tax credit carryforwards. \[FAS109, ¶256\]

\[\textsuperscript{[41b]}\] Integration is an issue when all of the following exist:

a. The accounting for a leveraged lease requires recognition of deferred tax credits.

b. The requirements of Section 127 limit the recognition of a tax benefit for deductible temporary differences and carryforwards not related to the leveraged lease.

c. Unrecognized tax benefits could offset taxable amounts that result from future recovery of the net investment in the leveraged lease.

In those circumstances, integration shall be required. However, integration should not override any results that are unique to income tax accounting for leveraged leases, for example, the manner of recognizing the tax effect of an enacted change in tax rates. \[FAS109, ¶126\]

.148B Paragraph .141 requires that the tax effect of any difference between the assigned value and the tax basis of a leveraged lease at the date of a business combination not be accounted for as a deferred tax credit. Section 127 does not change that requirement. Any tax effects included in unearned and deferred income as required by this section are not offset by the deferred tax consequences of other temporary differences or by the tax benefit of operating loss or tax credit carryforwards. However, deferred tax credits that arise after the date of a business combination are accounted for in the same manner as described above for leveraged leases that were not acquired in a purchase business combination. \[FAS109, ¶257\] \[Exhibit 185A in Section 127 presents an example that integrates the\] accounting for leveraged leases \[as required by this section\] and the accounting for income taxes required by Section 127. \[FAS109, ¶258\]

Disclosures

.149 For purposes of presenting the investment in a leveraged lease in the lessor's balance sheet, the amount of related deferred taxes shall be presented separately (from the remainder of the net investment). In the income statement or the notes thereto, separate presentation (from each other) shall be made of pretax income from the leveraged lease, the tax effect of pretax income, and the amount of investment tax credit recognized as income during the period. When leveraged leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the components of the net investment balance in leveraged leases as set forth in paragraph .145 shall be disclosed in the footnotes to the financial statements. Paragraph .154
contains an illustration of the balance sheet, income statement and footnote presentation for a leveraged lease. [FAS13, ¶47]

.401 Bargain purchase option. A provision allowing the lessee, at his option, to purchase the leased property for a price that is sufficiently lower than the expected fair value of the property at the date the option becomes exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured. [FAS 13, paragraph 5d].

.402 Bargain renewal option. A provision allowing the lessee, at [the lessee's] option, to renew the lease for a rental sufficiently lower than the fair rental of the property at the date the option becomes exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured. [FAS13, ¶5e]

.404 Contingent rentals. The increases or decreases in lease payments that result from changes occurring subsequent to the inception of the lease in the factors (other than the passage of time) on which lease payments are based, except as provided in the following sentence. Any escalation of minimum lease payments relating to increases in construction or acquisition cost of the leased property or for increases in some measure of cost or value during the construction or preconstruction period, as discussed in footnote 13, shall be excluded from contingent rentals. Lease payments that depend on a factor directly related to the future use of the leased property, such as machine hours of use or sales volume during the lease term, are contingent rentals and, accordingly, are excluded from minimum lease payments in their entirety. However, lease payments that depend on an existing index or rate, such as the consumer price index or the prime interest rate, shall be included in minimum lease payments based on the index or rate existing at the inception of the lease; any increases or decreases in lease payments that result from subsequent changes in the index or rate are contingent rentals and thus affect the determination of income as accruable. [FAS29, ¶11]

.406 Estimated economic life of leased property. The estimated remaining period during which the property is expected to be economically usable by one or more users, with normal repairs and maintenance, for the purpose for which it was intended at the inception of the lease, without limitation by the lease term. [FAS 13, paragraph 5g].

.409 Fair value of the leased property. The price for which the property could be sold in an arms-length transaction between unrelated parties. The following are examples of the determination of fair value:

a. When the lessor is a manufacturer or dealer, the fair value of the property at the inception of the lease will ordinarily be its normal selling price, reflecting any volume or trade discounts that may be applicable. However, the determination of fair value shall be made in light of market conditions prevailing at the time, which may indicate that the fair value of the property is less than the normal selling price and, in some instances, less than the cost of the property.

b. When the lessor is not a manufacturer or dealer, the fair value of the property at the inception of the lease will ordinarily be its cost, reflecting any volume or trade discounts that may be applicable. However, when there has been a significant lapse of time between the acquisition of the property by the lessor and the inception of the lease, the determination of fair value shall be made in light of market conditions prevailing at the
inception of the lease, which may indicate that the fair value of the property is greater or less than its cost or carrying amount, if different, (refer to paragraph .102). [FAS 13, paragraph 5c].

.412 Interest rate implicit in the lease. The discount rate that, when applied to (a) the minimum lease payments, excluding that portion of the payments representing executory costs to be paid by the lessor, together with any profit thereon, and (b) the unguaranteed residual value accruing to the benefit of the lessor causes the aggregate present value at the beginning of the lease term to be equal to the fair value of the leased property to the lessor at the inception of the lease, minus any investment tax credit retained by the lessor and expected to be realized by him. (This definition does not necessarily purport to include all factors that a lessor might recognize in determining his rate of return, for example, see paragraph .146.) [FAS 13, paragraph 5k]

---

403 If the lessor is not entitled to any excess of the amount realized on disposition of the property over a guaranteed amount, no unguaranteed residual value would accrue to the lessor's benefit. [FAS 13, paragraph 5k, footnote 8]

.413 Lease. An agreement conveying the right to use property, plant, or equipment (land or depreciable assets or both) usually for a stated period of time. [FAS 13, paragraph 1].

.414 Lease term. The fixed noncancelable term of the lease plus (a) all periods, if any, covered by bargain renewal options (as defined in paragraph .402), (b) all periods, if any, for which failure to renew the lease imposes a penalty (as defined in paragraph .418A) on the lessee in such amount that a renewal appears, at the inception of the lease, to be reasonably assured, (c) all periods, if any, covered by ordinary renewal options during which a guarantee by the lessee of the lessor's debt directly or indirectly related to the leased property is expected to be in effect or a loan from the lessee to the lessor directly or indirectly related to the leased property is expected to be outstanding, (d) all periods, if any, covered by ordinary renewal options preceding the date as of which a bargain purchase option is exercisable, and (e) all periods, if any, representing renewals or extensions of the lease at the lessor's option; however, in no case shall the lease term be assumed to extend beyond the date a bargain purchase option becomes exercisable. A lease that is cancelable (1) only upon the occurrence of some remote contingency, (2) only with the permission of the lessor, (3) only if the lessee enters into a new lease with the same lessor, or (4) only if the lessee incurs a penalty in such amount that continuation of the lease appears, at inception, reasonably assured shall be noncancelable for purposes of this definition. [FAS 98, paragraph 22a]

405 Paragraphs 5.01 through 5.05 address fiscal funding clauses in lease agreements.

405a The phrase indirectly related to the leased property is used in this paragraph to describe provisions or conditions that in substance are guarantees of the lessor's debt or loans to the lessor by the lessee that are related to the leased property but are structured in such a manner that they do not represent a direct guarantee or loan. Examples include a party related to the lessee guaranteeing the lessor's debt on behalf of the lessee, or the lessee financing the lessor's purchase of the leased asset using collateral other than the leased property. [FAS 98, paragraph 22a]

.415 Lessees incremental borrowing rate. The rate that, at the inception of the lease, the lessee would have incurred to borrow over a similar term the funds necessary to purchase the leased asset. 406
Leases

.406 Paragraphs .509 through .511 further discuss the interest rate used in calculating the present value of the minimum lease payments.

.417 Minimum lease payments.

(a) From the standpoint of the lessee: The payments that the lessee is obligated to make or can be required to make in connection with the leased property. [FAS 13, paragraph 5j]. (Contingent rentals, as defined in paragraph .404, shall be excluded from minimum lease payments.) [FAS 29, paragraph 10] However, a guarantee by the lessee of the lessors debt and the lessees obligation to pay (apart from the rental payments) executory costs in connection with the leased property shall be excluded. If the lease contains a bargain purchase option, only the minimum rental payments over the lease term (as defined in paragraph .413) and the payment called for by the bargain purchase option shall be included in the minimum lease payments. Otherwise, minimum lease payments include the following:

1. The minimum rental payments called for by the lease over the lease term.

2. Any guarantee by the lessee or any party related to the lessee of the residual value at the expiration of the lease term, whether or not payment of the guarantee constitutes a purchase of the leased property. When the lessor has the right to require the lessee to purchase the property at termination of the lease for a certain or determinable amount, that amount shall be considered a lessee guarantee. When the lessee agrees to make up any deficiency below a stated amount in the lessors realization of the residual value, the guarantee to be included in the minimum lease payments shall be the stated amount, rather than an estimate of the deficiency to be made up.

3. Any payment that the lessee must make or can be required to make upon failure to renew or extend the lease at the expiration of the lease term, whether or not the payment would constitute a purchase of the lease property. In this connection, it should be noted that the definition of lease term (refer to paragraph .413) includes all...
periods, if any, for which failure to renew the lease imposes a penalty on the lessee in an amount such that renewal appears, at the inception of the lease, to be reasonably assured. If the lease term has been extended because of that provision, the related penalty shall not be included in the minimum lease payments.

(b). From the standpoint of the lessor: The payments described above plus any guarantee of the residual value or of rental payments beyond the lease term by a third party unrelated to either the lessee or the lessor, provided the third party is financially capable of discharging the obligations that may arise from the guarantee. [FAS 13, paragraph 5j]

\[410\] If the guarantor is related to the lessor, the residual value shall be considered as unguaranteed.

.418A Penalty. Any requirement that is imposed or can be imposed on the lessee by the lease agreement or by factors outside the lease agreement to disburse cash, incur or assume a liability, perform services, surrender or transfer an asset or rights to an asset or otherwise forego an economic benefit, or suffer an economic detriment. Factors to consider when determining if an economic detriment may be incurred include, but are not limited to, the uniqueness of purpose or location of the property, the availability of a comparable replacement property, the relative importance or significance of the property to the continuation of the lessee's line of business or service to its customers, the existence of leasehold improvements or other assets whose value would be impaired by the lessee vacating or discontinuing use of the leased property, adverse tax consequences, and the ability or willingness of the lessee to bear the cost associated with relocation or replacement of the leased property at market rental rates or to tolerate other parties using the leased property. [FAS98, ¶22b]

.419 Related parties. A parent company and its subsidiaries, an owner company and its joint ventures (corporate or otherwise) and partnerships, and an investor (including a natural person) and its investees, provided that the parent company, owner enterprise, or investor has the ability to exercise significant influence over operating and financial policies of the related party, as significant influence is defined in section 182, paragraph 104. In addition to the examples of significant influence set forth in that paragraph, significant influence may be exercised through guarantees of indebtedness, extensions of credit, or through ownership of warrants, debt obligations, or other securities. If two or more enterprises are subject to the significant influence of a parent company, owner enterprise, investor (including a natural person), or common officers or directors, those enterprises shall be considered related parties with respect to each other. [FAS 13, paragraph 5a].

30. FAS 66, *Accounting for Sales of Real Estate*, defines the deposit method of accounting as follows:

Deposit Method

65. Under the deposit method, the seller does not recognize any profit, does not record notes receivable, continues to report in its financial statements the property and the related existing debt even if it has been assumed by the buyer, and discloses that those items are subject to a sales contract. The seller continues to charge depreciation to expense as a period cost for the property for which deposits have been received. Cash received from the buyer, including the initial investment and subsequent collections of principal and interest, is reported as a deposit on the contract except that, for sales that are not retail land sales, portions of cash received that are designated by the contract as interest and are not subject to refund offset carrying charges (property taxes and interest on existing debt) on the property. Interest collected that is subject to
refund and is included in the deposit account before a sale is consummated is accounted for as part of the buyer's initial investment at the time the sale is consummated. [FAS66, ¶7]

66. When a contract is canceled without a refund, deposits forfeited are recognized as income. When deposits on retail land sales are ultimately recognized as sales, the interest portion is recognized as interest income.

67. The seller's balance sheet presents nonrecourse debt assumed by the buyer among the liabilities; the debt assumed is not offset against the related property. The seller reports the buyer's principal payments on mortgage debt assumed as additional deposits with corresponding reductions of the carrying amount of the mortgage debt.

31. FASB Technical Bulletin 85-3, Accounting for Operating Leases with Scheduled Rent Increases, provides the following guidance:

Question

1. Certain operating lease agreements specify scheduled rent increases over the lease term. Such scheduled rent increases may, for example, be designed to provide an inducement or "rent holiday" for the lessee, to reflect the anticipated effects of inflation, to ease the lessee's near-term cash flow requirements, or to acknowledge the time value of money. For operating leases that include scheduled rent increases, is it ever appropriate for lessees or lessors to recognize rent expense or rental income on a basis other than the straight-line basis required by Statement 13?

Response

2. The effects of those scheduled rent increases, which are included in minimum lease payments under Statement 13, should be recognized by lessors and lessees on a straight-line basis over the lease term unless another systematic and rational allocation basis is more representative of the time pattern in which the leased property is physically employed. Using factors such as the time value of money, anticipated inflation, or expected future revenues to allocate scheduled rent increases is inappropriate because these factors do not relate to the time pattern of the physical usage of the leased property. However, such factors may affect the periodic reported rental income or expense if the lease agreement involves contingent rentals, which are excluded from minimum lease payments and accounted for separately under Statement 13, as amended by Statement 29.

32. FASB Technical Bulletin 88-1, Issues relating to Accounting for Leases: Time Pattern of the Physical Use of the Property in an Operating Lease, Lease Incentives in an Operating Lease, Applicability of Leveraged Lease Accounting to Existing Assets of the Lessor, Money-Over-Money Lease Transactions, Wrap Lease Transactions, provides the following guidance on operating leases:

TIME PATTERN OF THE PHYSICAL USE OF THE PROPERTY IN AN OPERATING LEASE

References: FASB Statement No. 13, Accounting for Leases, paragraph 15

FASB Technical Bulletin No. 85-3, Accounting for Operating Leases with Scheduled Rent Increases

Question 1

1. A lease agreement may include scheduled rent increases designed to accommodate the lessee's projected physical use of the property. For example, rents may escalate in contemplation of the lessee's physical use of the property even though the lessee takes possession of or
controls the physical use of the property at the inception of the lease, or rents may escalate under a master lease agreement as the lessee adds additional equipment to the leased property or requires additional space or capacity (hereinafter referred to as additional leased property). For operating leases that include those provisions, how should the rental payment obligation be recognized by the lessee and lessor in accordance with paragraph 15 of Statement 13 and Technical Bulletin 85-3?

Response

2. Both the lessee and the lessor should recognize the lease payments under Statement 13 and Technical Bulletin 85-3 as follows:

   a. If rents escalate in contemplation of the lessee's physical use of the leased property, including equipment, but the lessee takes possession of or controls the physical use of the property at the beginning of the lease term, all rental payments, including the escalated rents, should be recognized as rental expense or rental revenue on a straight-line basis in accordance with paragraph 15 of Statement 13 and Technical Bulletin 85-3 starting with the beginning of the lease term.

   b. If rents escalate under a master lease agreement because the lessee gains access to and control over additional leased property at the time of the escalation, the escalated rents should be considered rental expense or rental revenue attributable to the leased property and recognized in proportion to the additional leased property in the years that the lessee has control over the use of the additional leased property. The amount of rental expense or rental revenue attributed to the additional leased property should be proportionate to the relative fair value of the additional property, as determined at the inception of the lease, in the applicable time periods during which the lessee controls its use.

Background

3. This issue involves how to apply Technical Bulletin 85-3 to lease agreements that escalate rents in contemplation of the lessee's projected use of the property. The issue arises from paragraph 2 of Technical Bulletin 85-3, which states "... scheduled rent increases, which are included in minimum lease payments under Statement 13, should be recognized by lessors and lessees on a straight-line basis over the lease term UNLESS ANOTHER SYSTEMATIC AND RATIONAL ALLOCATION BASIS IS MORE REPRESENTATIVE OF THE TIME PATTERN IN WHICH THE LEASED PROPERTY IS PHYSICALLY EMPLOYED" (emphasis added).

4. This Technical Bulletin considers the right to control the use of the leased property as the equivalent of physical use. When the lessee controls the use of the leased property, recognition of rental expense or rental revenue should not be affected by the extent to which the lessee utilizes that property.

5. This Technical Bulletin makes a distinction between agreements that give the lessee the right to control the use of the leased property at the beginning of the lease term and those that do not. Escalated rents under agreements that give the lessee the right to control the use of the entire leased property at the beginning of the lease term should be included in the minimum lease payments and recognized on a straight-line basis over the lease term. When the agreement provides that the lessee gains control over additional leased property, rental expense or rental revenue should be recognized based on the relative fair value of the additional property leased and the period during which the lessee has the right to control the use of the additional property. This is the intent of Statement 13 and Technical Bulletin 85-3.
LEASE INCENTIVES IN AN OPERATING LEASE

References: FASB Statement No. 13, Accounting for Leases, paragraphs 15, 19, and 35-40

FASB Technical Bulletin No. 79-15, Accounting for Loss on a Sublease Not Involving the Disposal of a Segment

FASB Technical Bulletin No. 85-3, Accounting for Operating Leases with Scheduled Rent Increases

Question 2

6. An operating lease agreement with a new lessor may include incentives for the lessee to sign the lease, such as an up-front cash payment to the lessee, payment of costs for the lessee (such as moving expenses), or the assumption by the lessor of the lessee’s preexisting lease with a third party. For operating leases that include such incentives, should lessees or lessors ever recognize those incentives as rental expense or rental revenue other than on a straight-line basis in accordance with paragraph 15 of Statement 13 and Technical Bulletin 85-3?

Response

7. Payments made to or on behalf of the lessee represent incentives that should be considered reductions of rental expense by the lessee and reductions of rental revenue by the lessor over the term of the new lease. Similarly, losses incurred by the lessor as a result of assuming a lessee’s preexisting lease with a third party should be considered an incentive by both the lessor and the lessee. Incentives should be recognized on a straight-line basis over the term of the new lease in accordance with paragraph 15 of Statement 13, Technical Bulletin 85-3, and paragraphs 1-5 above.

8. The lessee’s immediate recognition of expenses or losses, such as moving expenses, losses on subleases, or the write-off of abandoned leasehold improvements, is not changed by this Technical Bulletin. Rather, this Technical Bulletin addresses the question of when to recognize the incentive related to the new lessor’s assumption of that expense or loss. The new lessor and the lessee should independently estimate any loss attributable to the assumption of a preexisting lease with a third party. For example, the lessee’s estimate of the incentive could be based on a comparison of the new lease with the market rental rate available for similar lease property or the market rental rate from the same lessor without the lease assumption, and the lessor should estimate any loss based on the total remaining costs reduced by the expected benefits from the sublease or use of the assumed leased property.

9. For example, in conjunction with an operating lease of property for eight years, the lessor assumes the lessee’s preexisting lease with a third party that has four years remaining. Assume that the old lease payment is $800 per year and the new lease payment is $1,200 per year. Also assume that the lessor estimates the loss on the assumed lease of $1,000 over its remaining term based on the ability to sublease the property for $550 per year. The lessee estimates the incentive as $960 based on a comparison of the preexisting lease rate to current rates for similar property. The accounting for that incentive is as follows:

</tbody>
</table>

To record cash payment on new lease and amortization of incentive over the new lease term

Background

10. Some have suggested that incentives paid to or incurred on behalf of the lessee by the lessor are not part of the normal lessee-lessee relationship and should be recognized in income by the lessee in the period paid or incurred by the lessor. This Technical Bulletin views those incentives as an inseparable part of the new lease agreement that must be recognized as reductions to rental expense and rental revenue on a straight-line basis over the term of the new lease in accordance with paragraph 15 of Statement 13, Technical Bulletin 85-3, and paragraph 2 above.

**State Regulations**
- No additional guidance obtained from state statutes or regulations.
Statutory Issue Paper No. 23

Title:
Property Occupied by the Company

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. A reporting entity is required to record its investment in real estate that is occupied by the company as a separate line item in the Invested Asset section of the statutory balance sheet. Additionally, a reporting entity is required to record rental income and expense related occupancy of its own building. Under GAAP, property used predominantly in a reporting entity’s operations is classified as an asset outside of invested assets. Additionally, GAAP prohibits the recognition of imputed investment income and rental expense for real estate used in the business.

2. The purpose of the issue paper is to establish statutory accounting principles for home office that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. For statutory accounting purposes, any real estate which is owned by and is more than 50% occupied by the reporting entity and its affiliates shall be considered “real estate occupied by the company.” “More than 50% occupied” shall mean that the square footage occupied by the reporting entity and its affiliates totals more than 50% of the rentable square footage of the property, including common areas. This shall include property occupied by the reporting entity which is not necessarily home office (e.g., claims processing, data processing and branch centers). Property which does not meet this 50% requirement shall be classified as property held for the production of income or property held for sale.

4. A reporting entity’s investment in property occupied by the company meets the definition of an asset as defined in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets (Issue Paper No. 4) and is an admitted asset to the extent it conforms to the requirements of this issue paper. The asset shall be recorded in accordance with Issue Paper No. 40 - Real Estate Investments (Issue Paper No. 40) (e.g., initial capitalization, valuation, including impairments of value, depreciation, interest expense on encumbrances, etc.). A reporting entity shall include in both its income and expenses an amount for rent relating to its occupancy of its own buildings. The amount recorded shall be at a rate comparable to rent received from others and/or rental rates of like property in the same area. If this is unavailable, it shall be derived from consideration of the repairs, expenses, taxes, and depreciation incurred, plus interest added at an average fair rate on the book value of the reporting entity’s investment in its home office building.
DISCUSSION:

5. The conclusion above clarifies current statutory accounting to include specific guidance on the definition of property occupied by the company. Additionally, the conclusion above changes current guidance to require property occupied by the reporting entity to be evaluated for impairment as specified in accordance with Issue Paper No. 40. Current statutory guidance requires property occupied by the company to be valued at depreciated cost (net of any encumbrances). FASB Statement No. 121, Accounting for the Impairment of Long-Lived Assets and Long-Lived Assets to Be Disposed Of (FAS 121), is adopted in Issue Paper No. 40. The conclusion above rejects paragraph 52 of FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises (FAS 60).

6. Recording property occupied by the company, net of any encumbrances, as an admitted asset is consistent with the Recognition Concept included in the Statement of Concepts. The Recognition Concept states,

The ability to meet policyholder obligations as predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which may be unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

Though in a depressed market it may take longer to liquidate than other invested assets, it is generally accepted that real estate is a marketable asset which is available to meet policyholder obligations.

7. So that the statement of operations and yield on invested assets of a reporting entity occupying its own real estate are comparable with a reporting entity that leases its offices under operating leases, rental income and expense are reported for the real estate occupied by the reporting entity. The rent charged should be comparable to the income that would be produced if the reporting entity was renting the real estate to a third party.

Drafting Notes/Comments
- Accounting for real estate is addressed in Issue Paper No. 40 - Real Estate Investments.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
8. Chapter 4, Real Estate, in the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies (Life/A&H Accounting Practices and Procedures Manual) contains the following guidance on reporting for real estate occupied by the reporting entity:

Directly-owned real estate is reported separately in the statutory financial statement. Holdings so reported are classified as properties (a) occupied by the company, (b) acquired in satisfaction of debt, and (c) investments in real estate. These classes may include real estate owned under contract of sale.

In the statutory financial statement, a company must include in both its income and expenses an amount for rent relating to its occupancy of its own buildings. This amount can be the estimate current market rental value of the space involved, or it can be the amount derived from consideration of the repairs, expenses, taxes, and depreciation incurred, plus interest added at an average fair rate on the book value of the company's investment in its home office building. The
figure thus determined, being both charged to expenses and credited to income, has no effect either on the company's overall net income or surplus.

Rent on Company-Owned Office Building

Real estate income from company-owned property includes rent received from the leasing of space to others and also an imputed rental charge for the portion of the building occupied by the company. This rental charge is made on the theory that such space can be rented to others; therefore, the company is entitled to income on its investment. Some states require that this rent be comparable to rent received from others and/or rental rates of like property in the same area. It should be noted that an offsetting charge is made to rent expense.

**Generally Accepted Accounting Principles**

12. FAS 60, *Accounting and Reporting by Insurance Enterprises*, contains the guidance relating to real estate occupied by the reporting entity. It states:

Real Estate Used in the Business

52. Real estate shall be classified either as an investment or as real estate used in the enterprise's operations, depending on its predominant use. Depreciation and other real estate operating costs shall be classified as investment expenses or operating expenses consistent with the balance sheet classification of the related asset. Imputed investment income and rental expense shall not be recognized for real estate used in the business.

13. FAS 121 contains the following guidance for real estate occupied by the reporting entity:

Assets to Be Held and Used

Recognition and Measurement of Impairment

4. An entity shall review long-lived assets and certain identifiable intangibles to be held and used for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable.

5. The following are examples of events or changes in circumstances that indicate that the recoverability of the carrying amount of an asset should be assessed:

   a. A significant decrease in the market value of an asset

   b. A significant change in the extent or manner in which an asset is used or a significant physical change in an asset
c. A significant adverse change in legal factors or in the business climate that could affect the value of an asset or an adverse action or assessment by a regulator.

d. An accumulation of costs significantly in excess of the amount originally expected to acquire or construct an asset.

e. A current period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with an asset used for the purpose of producing revenue.

6. If the examples of events or changes in circumstances set forth in paragraph 5 are present or if other events or changes in circumstances indicate that the carrying amount of an asset that an entity expects to hold and use may not be recoverable, the entity shall estimate the future cash flows expected to result from the use of the asset and its eventual disposition. Future cash flows are the future cash inflows expected to be generated by an asset less the future cash outflows expected to be necessary to obtain those inflows. If the sum of the expected future cash flows (undiscounted and without interest charges) is less than the carrying amount of the asset, the entity shall recognize an impairment loss in accordance with this Statement. Otherwise, an impairment loss shall not be recognized; however, a review of depreciation policies may be appropriate.1

7. An impairment loss recognized in accordance with paragraph 6 shall be measured as the amount by which the carrying amount of the asset exceeds the fair value of the asset. The fair value of an asset is the amount at which the asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for the measurement, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information available in the circumstances. The estimate of fair value shall consider prices for similar assets and the results of valuation techniques to the extent available in the circumstances. Examples of valuation techniques include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis.

8. In estimating expected future cash flows for determining whether an asset is impaired (paragraph 6), and if expected future cash flows are used in measuring assets that are impaired (paragraph 7), assets shall be grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets.

9. Estimates of expected future cash flows shall be the best estimate based on reasonable and supportable assumptions and projections. All available evidence should be considered in developing estimates of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. If a range is estimated for either the amount or timing of possible cash flows, the likelihood of possible outcomes shall be considered in determining the best estimate of future cash flows.
10. In limited circumstances, the test specified in paragraph 6 will be applicable at only the entity level because the asset being tested for recoverability does not have identifiable cash flows that are largely independent of other asset groupings. In those instances, if the asset is not expected to provide any service potential to the entity, the asset shall be accounted for as if abandoned or held for disposal in accordance with the provisions of paragraph 15 of this Statement. If the asset is expected to provide service potential, an impairment loss shall be recognized if the sum of the expected future cash flows (undiscounted and without interest charges) for the entity is less than the carrying amounts of the entity's assets covered by this Statement.

11. After an impairment is recognized, the reduced carrying amount of the asset shall be accounted for as its new cost. For a depreciable asset, the new cost shall be depreciated over the asset's remaining useful life. Restoration of previously recognized impairment losses is prohibited.

Statutory Issue Paper No. 24

Title:
Discontinued Operations and Extraordinary Items

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory accounting guidance does not define nor does it address the accounting treatment for the disposal of a segment of a business or extraordinary items.

2. GAAP guidance contained in Accounting Principles Board Opinion No. 30, Reporting the Results of Operations - Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions, as amended (APB 30) defines discontinued operations, requires accrual of losses associated with the disposal of a segment of a business and states that results of operations of discontinued operations should be disclosed as a separate line item in the balance sheet and in the income statement after income from the on-going operations of the reporting entity, net of applicable income taxes. It also contains guidance on the calculation of the gain or loss on the disposal of a segment of the business. Gains on the disposal of a segment of the business are not to be recorded until realized.

3. APB 30 also defines extraordinary items and requires extraordinary items to be disclosed as a separate line item in the income statement after income from the on-going operation of the reporting entity, net of applicable income taxes.

4. The purpose of this issue paper is to establish statutory accounting principles related to the accounting and reporting for the effects of the disposal of a segment of a business and extraordinary items that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

Discontinued Operations

5. If a loss is expected from the proposed sale or abandonment of a segment of business, the estimated loss shall be accrued at the measurement date, as defined in paragraph 13 below, in accordance with Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets. If a gain is expected, it shall be recognized when realized, in accordance with Issue Paper No. 20 - Gain Contingencies, which ordinarily is the disposal date.

6. The determination of whether a gain or loss results from the disposal should be made at the measurement date based on estimates at that date of the net realizable value of the segment after giving consideration to any estimated costs and expenses directly associated with the disposal and, if a plan of disposal is to be carried out over a period of time and contemplates continuing operations during that period, to any estimated income or losses from operations. If it is expected that net losses from operations will be incurred between the measurement date and the expected disposal date, the computation of the
gain or loss on disposal should also include an estimate of such amounts. If it is expected that net income will be generated from operations during that period the computation should include the estimated net income, limited however to the amount of any loss otherwise recognizable for the disposal, with any remainder accounted for when realized. Any changes in the original estimate shall be accounted for in accordance with Issue Paper No. 3 - Accounting Changes.

7. The results of a reporting entity’s discontinued operations shall be reported consistently with the entity’s reporting of continuing operations (i.e. no separate line item presentation in the balance sheet or statement of operations aggregating current and future losses from the measurement date).

8. Additionally, the notes to the financial statements for the period encompassing the measurement date and the year subsequent shall contain the following:

   a. The identity of the segment of business that has been or will be discontinued,
   b. The expected disposal date, if known (see definition in paragraph 13 below),
   c. The expected manner of disposal,
   d. A description of the remaining assets and liabilities of the segment at the balance sheet date and the estimated payout pattern,
   e. The amounts related to the discontinued operations and the effect on the statement of operations including the balance sheet and income statement line items which have been affected.

9. If material revisions are made to the estimates of the cost to dispose of a segment in years subsequent to the disclosure required in paragraph 8 above, the nature and the effect of the revisions to the estimates shall be disclosed for the period in which the revision was made including the effect on income or loss from operations and the effect on the carrying amount of the remaining assets and liabilities of the segment at the balance sheet date.

Extraordinary Items

10. Extraordinary items, as defined in paragraph 13 below, shall be reported consistently with the reporting entity’s reporting of continuing operations (i.e. no separate line item presentation in the balance sheet or statement of operations). Such items shall not be charged directly to surplus unless specifically addressed elsewhere within the codification.

11. The nature of an extraordinary event or transaction and the principle items entering into the determination of an extraordinary gain or loss shall be disclosed in the notes to the financial statements. This disclosure shall include the line items which have been affected by the estimate of the extraordinary item.

12. Material events or transactions that are either unusual or occur infrequently, but not both, are not considered extraordinary items. However, such material events or transactions shall be disclosed in the notes to the financial statements.

Definitions

13. For purposes of statutory accounting, the following definitions shall apply:

   “Discontinued operations” shall be defined as the operations of a segment of a business that has been sold, abandoned, spun off, or otherwise disposed of or, although still operating, is the subject of a formal plan for disposal.
A “segment” of a business shall be defined as a component of an entity, likely in the form of a subsidiary, whose activities represent a separate major type of business or class of customer. The assets, results of operations, and activities of a segment must be clearly distinguished, physically and operationally and for financial reporting purposes, from the other assets, results of operations, and activities of the entity. The fact that the results of operations of the segment being sold or abandoned cannot be separately identified strongly suggests that the transaction should not be classified as the disposal of a segment of the business. The disposal of a segment of a business should be distinguished from other disposals of assets incident to the evolution of the entity’s business, such as the disposal of a line of business or the shifting of marketing activities from one location to another.

“Measurement date” shall be defined as the date on which management having authority to approve the action commits itself to a formal plan to dispose of a segment of the business, whether by sale or abandonment. The plan, at a minimum, should include identification of the major assets to be disposed of, the expected method of disposal, the period expected to be required for completion of the disposal, an active program to find a buyer if disposal is to be by sale, the estimated results of operations of the segment from the measurement date to the disposal date (defined below), and the estimated proceeds or salvage to be realized by disposal.

“Disposal date” shall be defined as the date of closing the sale if the disposal is by sale or the date that operations cease if the disposal is by abandonment.

“Extraordinary items” shall be defined as those events or transactions which meet both of the following criteria:

(a) Unusual nature - the underlying event or transaction possesses a high degree of abnormality and is clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the reporting entity, taking into account the environment in which the reporting entity operates.

(b) Infrequency of occurrence - the underlying event or transaction would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the reporting entity operates.

DISCUSSION:

14. The conclusion above adopts the accounting principles relating to the accounting for the disposal of a segment of a business included in APB No. 30, paragraphs 13 through 18. These paragraphs define certain terminology relevant to the disposal of a segment and set forth criteria for recording a related loss. The conclusion above also adopts the definition of an extraordinary item included in paragraph 20 of APB 30. It rejects all other paragraphs relating to the accounting and reporting of discontinued operations, extraordinary items and unusual or infrequently occurring events and transactions. The conclusion above adopts the interpretations of APB 30 included in Accounting Interpretation of Accounting Principles Board Opinion 30, Reporting the Results of Operations (AIN-APB 30), relating to the definition of extraordinary items and terminology relevant to the disposal of a segment and the criteria for recording a related loss. It rejects all other interpretations of APB 30 relating to the accounting and reporting of discontinued operations, extraordinary items and unusual or infrequently occurring events and transactions. This statement also adopts FASB Emerging Issues Task Force No. 85-36, Discontinued Operations with Expected Gain and Interim Operating Losses.

15. This issue paper rejects FASB Emerging Issues Task Force No. 94-3, Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs
16. As stated above, statutory accounting guidance does not address the accounting and reporting for discontinued operations and extraordinary items and industry practice is varied. Predominant practice has been to accrue losses resulting from discontinued operations, however, practice varies as to the presentation of the loss. Some entities record extraordinary items as a charge directly to surplus; other entities do not separate extraordinary items from the results of continuing operations.

17. The conclusion above requires a loss associated with discontinued operations to be recorded at the measurement date. This is consistent with the conservatism concept in the Statement of Concepts. Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets requires an estimated loss from a loss contingency to be recorded when (a) it is probable that a loss will be incurred and (b) the amount of the loss can be reasonably estimated.

Drafting Notes/Comments
- None

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
18. Statutory guidance does not address the accounting treatment for the disposal of a segment or extraordinary items.

Generally Accepted Accounting Principles
19. Accounting Principles Board Opinion No. 30, Reporting the Results of Operations - Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions (APB 30), discusses discontinued operations and extraordinary items in the following excerpts:

Income Statement Presentation and Disclosure

8. Discontinued Operations of a Segment of a Business. For purposes of this Opinion, the term discontinued operations refers to the operations of a segment of a business as defined in paragraph 13 that has been sold, abandoned, spun off, or otherwise disposed of or, although still operating, is the subject of a formal plan for disposal (see paragraph 14). The Board concludes that the results of continuing operations should be reported separately from discontinued operations and that any gain or loss from disposal of a segment of a business (determined in accordance with paragraphs 15 and 16) should be reported in conjunction with the related results of discontinued operations and not as an ordinary item. Accordingly, operations of a segment that has been or will be discontinued should be reported separately as a component of income before extraordinary items and the cumulative effect of accounting changes (if applicable) in the following manner:

Income from continuing operations before income taxes ² $XXXX
Provision for income taxes XXX
Income from continuing operations ² $XXXX

Discontinued operations(Note_____):
Income (loss) from operations of discontinued Division X (less applicable income taxes of $______) $XXXX
Loss on disposal of Division X, including provision of $_____ for operating losses during phase-out period (less applicable income taxes of $_____)

Net Income

Amounts of income taxes applicable to the results of discontinued operations and the gain or loss from disposal of the segment should be disclosed on the face of the income statement or in related notes. Revenues applicable to the discontinued operations should be separately disclosed in the related notes.

---

2 These captions should be modified appropriately when an entity reports an extraordinary item and/or the cumulative effect of a change in accounting principle in accordance with APB Opinion No. 20, Accounting Changes. The presentation of per share data will need similar modification.

---

11. In the absence of discontinued operations and changes in accounting principles, the following main captions should appear in an income statement if extraordinary items are reported (paragraphs 17-19 of APB Opinion No. 9):

Income before extraordinary items $XXXX

Extraordinary items of less applicable income taxes of $_____ (Note_____)

Net income $XXXX

---

4 This caption should be modified appropriately when an entity reports the cumulative effect of an accounting change.

---

The caption extraordinary items should be used to identify separately the effects of events and transactions, other than the disposal of a segment of a business, that meet the criteria for classification as extraordinary as discussed in paragraphs 19-24. Descriptive captions and the amounts for individual extraordinary events or transactions should be presented, preferably on the face of the income statement, if practicable; otherwise disclosure in related notes is acceptable. The nature of an extraordinary event or transaction and the principal items entering into the determination of an extraordinary gain or loss should be described. The income taxes applicable to extraordinary items should be disclosed on the face of the income statement; alternatively disclosure in the related notes is acceptable. The caption net income should replace the three captions shown above if the income statement includes no extraordinary items.

Accounting for the Disposal of a Segment of a Business

13. For purposes of this Opinion, the term segment of a business refers to a component of an entity whose activities represent a separate major line of business or class of customer. A segment may be in the form of a subsidiary, a division, or a department, and in some cases a joint venture or other nonsubsidiary investee, provided that its assets, results of operations, and activities can be clearly distinguished, physically and operationally and for financial reporting
purposes, from the other assets, results of operations, and activities of the entity. Financial statements of current and prior periods that include results of operations prior to the measurement date (as defined in paragraph 14) should disclose the results of operations of the disposed segment, less applicable income taxes, as a separate component of income before extraordinary items (see paragraph 8). The fact that the results of operations of the segment being sold or abandoned cannot be separately identified strongly suggests that the transaction should not be classified as the disposal of a segment of the business. The disposal of a segment of a business should be distinguished from other disposals of assets incident to the evolution of the entity's business, such as the disposal of part of a line of business, the shifting of production or marketing activities for a particular line of business from one location to another, the phasing out of a product line or class of service, and other changes occasioned by technological improvements. The disposal of two or more unrelated assets that individually do not constitute a segment of a business should not be combined and accounted for as a disposal of a segment of business.

14. Definition of Measurement and Disposal Dates. For purposes of applying the provisions of this Opinion, the measurement date of a disposal is the date on which the management having authority to approve the action commits itself to a formal plan to dispose of a segment of the business, whether by sale or abandonment. The plan of disposal should include, as a minimum, identification of the major assets to be disposed of, the expected method of disposal, the period expected to be required for completion of the disposal, an active program to find a buyer if disposal is to be by sale, the estimated results of operations of the segment from the measurement date to the disposal date, and the estimated proceeds or salvage to be realized by disposal. For purposes of applying this Opinion, the disposal date is the date of closing the sale if the disposal is by sale or the date that operations cease if the disposal is by abandonment.

15. Determination of Gain or Loss on Disposal of a Segment of a Business. If a loss is expected from the proposed sale or abandonment of a segment, the estimated loss should be provided for at the measurement date. If a gain is expected, it should be recognized when realized, which ordinarily is the disposal date. The determination of whether a gain or a loss results from the disposal of a segment of a business should be made at the measurement date based on estimates at that date of the net realizable value of the segment after giving consideration to any estimated costs and expenses directly associated with the disposal and, if a plan of disposal is to be carried out over a period of time and contemplates continuing operations during that period, to any estimated income or losses from operations. If it is expected that net losses from operations will be incurred between the measurement date and the expected disposal date, the computation of the gain or loss on disposal should also include an estimate of such amounts. If it is expected that income will be generated from operations during that period the computation of the gain or loss should include the estimated income, limited however to the amount of any loss otherwise recognizable from the disposal; any remainder should be accounted for as income when realized. The Board believes that the estimated amounts of income or loss from operations of a segment between measurement date and disposal date included in the determination of loss on disposal should be limited to those amounts that can be projected with reasonable accuracy. In the usual circumstance, it would be expected that the plan of disposal would be carried out within a period of one year from the measurement date and that such projections of operating income or loss would not cover a period exceeding approximately one year.

5 If financial statements for a date prior to the measurement date have not been issued, and the expected loss provides evidence of conditions that existed at the date of such statements and affects estimates inherent in the process of preparing them, the financial statements should be adjusted for any change in estimates
resulting from the use of such evidence. (See Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures, paragraph 560.03.)

6 When disposal is estimated to be completed within one year and subsequently is revised to a longer period of time, any revision of the net realizable value of the segment should be treated as a change in estimate (see paragraph 25).

16. Gain or loss from the disposal of a segment of a business should not include adjustments, costs, and expenses associated with normal business activities that should have been recognized on a going-concern basis up to the measurement date, such as adjustments of accruals on long-term contracts or write-down or write-off of receivables, inventories, property, plant, and equipment used in the business, equipment leased to others, deferred research and development costs, or other intangible assets. However, such adjustments, costs, and expenses which (a) are clearly a direct result of the decision to dispose of the segment and (b) are clearly not the adjustments of carrying amounts or costs, or expenses that should have been recognized on a going-concern basis prior to the measurement date should be included in determining the gain or loss on disposal. Results of operations before the measurement date should not be included in the gain or loss on disposal.

17. Costs and expenses directly associated with the decision to dispose include items such as severance pay, additional pension costs, employee relocation expenses, and future rentals on long-term leases to the extent they are not offset by sub-lease rentals.

18. Disclosure. In addition to the amounts that should be disclosed in the financial statements (paragraph 8), the notes to financial statements for the period encompassing the measurement date should disclose:

a. the identity of the segment of business that has been or will be discontinued,
b. the expected disposal date, if known (see paragraph 14),
c. the expected manner of disposal,
d. a description of the remaining assets and liabilities of the segment at the balance sheet date, and
e. the income or loss from operations and any proceeds from disposal of the segment during the period from the measurement date to the date of the balance sheet.

For periods subsequent to the measurement date and including the period of disposal, notes to the financial statements should disclose the information listed in (a), (b), (c), and (d) above and also the information listed in (e) above compared with the prior estimates.

7 Consideration should be given to disclosing this information by segregation in the balance sheet of the net assets and liabilities (current and noncurrent) of the discontinued segment. Only liabilities which will be assumed by others should be designated as liabilities of the discontinued segment. If the loss on disposal cannot be estimated within reasonable limits, this fact should be disclosed.

20. Extraordinary items are events and transactions that are distinguished by their unusual nature and by the infrequency of their occurrence. Thus, both of the following criteria should be met to classify an event or transaction as an extraordinary item:

a. Unusual nature—the underlying event or transaction should possess a high degree of abnormality and be of a type clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the entity, taking into account the environment in which the entity operates. (See discussion in paragraph 21.)
b. Infrequency of occurrence-the underlying event or transaction should be of a type that would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the entity operates. (See discussion in paragraph 22.)

21. Unusual Nature. The specific characteristics of the entity, such as type and scope of operations, lines of business, and operating policies should be considered in determining ordinary and typical activities of an entity. The environment in which an entity operates is a primary consideration in determining whether an underlying event or transaction is abnormal and significantly different from the ordinary and typical activities of the entity. The environment of an entity includes such factors as the characteristics of the industry or industries in which it operates, the geographical location of its operations, and the nature and extent of governmental regulation. Thus, an event or transaction may be unusual in nature for one entity but not for another because of differences in their respective environments. Unusual nature is not established by the fact that an event or transaction is beyond the control of management.

22. Infrequency of Occurrence. For purposes of this Opinion, an event or transaction of a type not reasonably expected to recur in the foreseeable future is considered to occur infrequently. Determining the probability of recurrence of a particular event or transaction in the foreseeable future should take into account the environment in which an entity operates. Accordingly, a specific transaction of one entity might meet that criterion and a similar transaction of another entity might not because of different probabilities of recurrence. The past occurrence of an event or transaction for a particular entity provides evidence to assess the probability of recurrence of that type of event or transaction in the foreseeable future. By definition, extraordinary items occur infrequently. However, mere infrequency of occurrence of a particular event or transaction does not alone imply that its effects should be classified as extraordinary. An event or transaction of a type that occurs frequently in the environment in which the entity operates cannot, by definition, be considered as extraordinary, regardless of its financial effect.

23. Certain gains and losses should not be reported as extraordinary items because they are usual in nature or may be expected to recur as a consequence of customary and continuing business activities. Examples include:
   
a. Write down or write-off of receivables, inventories, equipment leased to others, deferred research and development costs, or other intangible assets.

b. Gains or losses from exchange or translation of foreign currencies, including those relating to major devaluations and revaluations.

c. Gains or losses on disposal of a segment of a business.

d. Other gains or losses from sale or abandonment of property, plant, or equipment used in the business.

e. Effects of a strike, including those against competitors and major suppliers.

f. Adjustment of accruals on long-term contracts.

In rare situations, an event or transaction may occur that clearly meets both criteria specified in paragraph 20 of this Opinion and thus gives rise to an extraordinary gain or loss that includes one or more of the gains or losses enumerated above. In these circumstances, gains or losses such as (a) and (d) above should be included in the extraordinary item if they are a direct result of a major casualty (such as an earthquake), an expropriation, or a prohibition under a newly enacted law or regulation that clearly meets both criteria specified in paragraph 20. However, any portion of such losses which would have resulted from a valuation of assets on a going concern basis should not be
included in the extraordinary items. Disposals of a segment of a business should be accounted for pursuant to paragraph 13 and presented in the income statement pursuant to paragraph 8 even though the circumstances of the disposal meet the criteria specified in paragraph 20.

Adjustment of Amounts Reported in Prior Periods

25. Circumstances attendant to disposals of a segment of a business and extraordinary items frequently require estimates, for example, of associated costs and occasionally of associated revenue, based on judgment and evaluation of the facts known at the time of first accounting for the event. Each adjustment in the current period of a loss on disposal of a business segment or of an element of an extraordinary item that was reported in a prior period [should not be reported as a prior period adjustment unless it meets the criteria for a prior period adjustment as defined in paragraph 23 of APB Opinion No. 9. An adjustment that does not meet such criteria] should be separately disclosed as to year of origin, nature, and amount and classified separately in the current period in the same manner as the original item. If the adjustment is the correction of an error, the provisions of APB Opinion No. 20, Accounting Changes, paragraphs 36 and 37 should be applied.

Disclosure of Unusual or Infrequently Occurring Items

26. A material event or transaction that is unusual in nature or occurs infrequently but not both, and therefore does not meet both criteria for classification as an extraordinary item, should be reported as a separate component of income from continuing operations. The nature and financial effects of each event or transaction should be disclosed on the face of the income statement or, alternatively, in notes to the financial statements. Gains or losses of a similar nature that are not individually material should be aggregated. Such items should not be reported on the face of the income statement net of income taxes or in any manner inconsistent with the provisions of paragraphs 8 and 11 of this Opinion or in any other manner that may imply that they are extraordinary items. Similarly, the earnings per share effects of those items should not be disclosed on the face of the income statement. 8

8 Exceptions to the final two sentences of this paragraph are specified in the following AICPA industry audit guides: Audits of Banks, p. 36; Audits of Fire and Casualty Insurance Company, p. 66; and Audits of Stock Life Insurance Companies, p. 89.

20. Note that the bracketed section of APB 30, paragraph 25 was amended by FASB Statement No. 16, Prior Period Adjustments.

OTHER SOURCES OF INFORMATION:

21. The NAIC Technical Resource Group proposed draft life codification, Chapter 28, Unassigned Surplus, includes the following:

Extraordinary Items

Extraordinary items are events and transactions that are distinguished by their unusual nature and by the infrequency of their occurrence. Both of the following criteria should be met to classify an event or transaction as an extraordinary item:

a. Unusual nature - the underlying event or transaction should possess a high degree of abnormality and be of a type clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the entity, taking into consideration the environment in which the entity operates.
b. Infrequency of occurrence - the underlying event or transaction should be of a type that would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the entity operates.

Unusual Nature. The specific characteristics of the entity, such as type and scope of operations, lines of business, and operating policies should be considered in determining ordinary and typical activities of an entity. The environment in which an entity operates is a primary consideration in determining whether an underlying event or transaction is abnormal and significantly different from the ordinary and typical activities of the entity. The environment of an entity includes such factors as the characteristics of its products and the geographic location of its operations. Thus, an event or transaction may be unusual in nature for one entity but not for another because of differences in their respective environments. Unusual nature is not established by the fact that an event or transaction is beyond the control of management.

Infrequency of Occurrence. An event or transaction of a type not reasonably expected to recur in the foreseeable future is considered to occur infrequently. Determining the probability of recurrence of a particular event or transaction in the foreseeable future should take into account the environment in which the entity operates. Accordingly, a specific transaction of one entity might meet that criterion and a similar transaction of another entity might not because of different probabilities of recurrence. The past occurrence of an event or transaction for a particular entity provides evidence to assess the probability of recurrence of that type of event or transaction in the foreseeable future. By definition, extraordinary items occur infrequently. However, mere infrequency of occurrence of a particular event or transaction does not alone imply that its effects should be classified as extraordinary. An event or transaction of a type that occurs frequently in the environment in which the entity operates cannot, by definition, be considered as extraordinary, regardless of the financial effect.

Materiality. An extraordinary event or transaction, if material, shall be classified separately in the Summary of Operations. Items shall be evaluated individually and not in the aggregate in determining whether an event or transaction is material.

Even though they do not meet the criteria for an extraordinary item, if material, gains and losses from extinguishment of debt, significant asset disposition after a pooling, discontinuation of accounting for the effects of certain types of regulation, shall be classified as an extraordinary item.

Title:
Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties

Status:
Finalized June 23, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Transactions with affiliates and other related parties are entered into in the ordinary course of business by reporting entities. Transactions may involve an exchange of assets and liabilities between the related parties or the performance of services. Such transactions may not necessarily be on an arm's length basis. Current statutory literature provides guidance on accounting for certain transactions between affiliates, which is based on whether the transactions are considered economic or non-economic transactions. It also requires reporting entities to disclose transactions with affiliates in the notes to the financial statements.

2. GAAP provides limited guidance on accounting for related party transactions, and there is no discussion regarding accounting for economic versus non-economic transactions with related parties. Rather, existing GAAP guidance focuses on disclosure of related party transactions with specific GAAP literature dealing with related party issues where there is a perceived potential for abusive accounting practices (e.g. sale lease-back transactions, equity accounting, nonmonetary transactions, etc.).

3. The purpose of this issue paper is to establish statutory accounting principles and disclosure requirements for related party transactions that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

4. Related parties are defined as entities that have common interests as a result of ownership, control, or affiliation by contract. Related parties shall include but are not limited to the following:

   a. Affiliates of the reporting entity, as defined in paragraph 5;

   b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;

   c. The principal owners of the reporting entity;

   d. The management of the reporting entity, its parent or affiliates (including directors);

   e. Members of the immediate families of principal owners and management of the reporting entity, its parent or affiliates and their management;
f. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;

g. A party which can directly or indirectly significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;

h. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;

i. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and partnerships, joint ventures and limited liability companies. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of a person or entity, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship, (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. The 10% ownership threshold shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in a company and a second member of the group has an 8% interest in the same company the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. These presumptions can be overcome by predominant evidence to the contrary, however, they shall stand until overcome by such predominant contradictory evidence. A reporting entity with 10% or more of the voting interest shall evaluate all facts and circumstances relating to the investment and reach a judgment about whether the presumption of control is overcome. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting interest of an investee.

8. Related party transactions are subject to abuses because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny.
Related Party Loans

9. Loans or advances (including debt, public or private) made by a reporting entity to its parent or principal owner shall be admitted if approval for the transaction has been obtained from the domiciliary commissioner and the loan or advance is determined to be collectible based on the parent or principal owner’s independent payment ability. An affiliate’s ability to pay shall be determined after consideration of the liquid assets or revenues available from external sources (i.e. determination shall not include dividend paying ability of the subsidiary making the loan or advance) which are available to repay the balance and/or maintain its account on a current basis. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets (Issue Paper No. 5), it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

10. Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm’s-length transactions as defined in paragraph 13. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner) that are economic transactions as defined in paragraph 13 shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with Issue Paper No. 5 it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

11. Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month’s payment shall be nonadmitted assets.

12. Indirect loans are loans or extensions of credit to any person who is not an affiliate, where the reporting entity makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the reporting entity making the loans or extensions of credit. The admissibility of indirect loans made by a reporting entity for the benefit of its parent or principal owner shall be determined in accordance with the guidelines in paragraph 9. Indirect loans made for the benefit of all other related parties shall be evaluated and accounted for consistent with loans and advances to related parties as described in paragraphs 10 and 11.

Transactions Involving the Exchange of Assets or Liabilities

13. An arm's length transaction is defined as a transaction in which willing parties, each being reasonably aware of all relevant facts and neither under compulsion to buy, sell or loan, would be willing to participate. A transaction between related parties involving the exchange of assets or liabilities shall be designated as either an economic transaction or non-economic transaction. An economic transaction shall be defined as an arm's length transaction which results in the transfer of risks and rewards of ownership and represents a consummated act thereof, i.e. “permanence.” The appearance of permanence is also an important criterion in assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed. If subsequent events or transactions reverse the effect of an earlier transaction prior to the issuance of the financial statements, the reversal shall be considered in determining whether economic substance existed in the case of the original transaction. Subsequent events are addressed in Issue Paper No. 9 - Subsequent Events. An economic transaction must represent a bonafide business purpose demonstrable in measurable terms. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction. The statutory accounting shall follow the substance of the transaction and not the form of the transaction.
14. In determining whether there has been a transfer of the risks and rewards of ownership in the transfer of assets or liabilities between related parties, the following—and any other relevant facts and circumstances related to the transaction—shall be considered:

a. Whether the seller has a continuing involvement in the transaction or in the financial interest transferred, such as through the exercise of managerial authority to a degree usually associated with ownership;
b. Whether there is an absence of significant financial investment by the buyer in the financial interest transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer;
c. Whether repayment of debt that constitutes the principal consideration in the transaction is dependent on the generation of sufficient funds from the asset transferred;
d. Whether limitations or restrictions exist on the buyer’s use of the financial interest transferred or on the profits arising from it;
e. Whether there is retention of effective control of the financial interest by the seller.

15. A transaction between related parties may meet the criteria for treatment as an economic transaction at one level of financial reporting but may not meet such criteria at another level of financial reporting. An example of such a transaction is a reporting entity purchasing securities at market value from an affiliated reporting entity that carried the securities at amortized cost. This transaction meets the criteria of an economic transaction at this level of financial reporting and therefore the selling reporting entity would record a gain and the acquiring reporting entity would record the securities at their cost (market value on the transaction date). At the common parent level of reporting, this transaction has resulted in the mere inflation of surplus, and therefore, is a non-economic transaction. The parent reporting entity shall defer the net effects of any gain or increase in surplus resulting from such transactions by recording a deferred gain and an unrealized loss. The deferred gain shall not be recognized by the parent reporting entity unless and until arms-length transaction(s) with independent third parties give rise to appropriate recognition of the gain.

16. A non-economic transaction shall be defined as any transaction that does not meet the criteria of an economic transaction. Similar to the situation described in paragraph 15, transfers of assets from a parent reporting entity to a subsidiary, controlled or affiliated entity shall be treated as non-economic transactions at the parent reporting level because the parent has continuing indirect involvement in the assets.

17. When accounting for a specific transaction reporting entities shall use the following valuation methods:

a. Economic transactions between related parties shall be recorded at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus (see paragraph 15);
b. Non-economic transactions between reporting entities, which meet the definition of related parties above, shall be recorded at the lower of existing book values or fair values at the date of the transaction;
c. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified;

d. Transactions which are designed to avoid statutory accounting practices shall be included as if the reporting entity continued to own the assets or be obligated for a liability directly instead of through a subsidiary.

Examples of transactions that would be deemed to be non-economic include, security swaps of similar issues between or among affiliated companies, and swaps of dissimilar issues accompanied by exchanges of liabilities between or among affiliates.

**Transactions Involving Services**

18. Transactions involving services being provided by a related party may not be arm’s-length. Amounts charged for services provided may not be at current market rates for such services or may be based on allocations of costs. Determining market rates for services is difficult because the circumstances surrounding each transaction are unique. Unlike transactions involving the exchange of assets and liabilities between related parties, transactions for services create income on one party’s books and expense on the second party’s books and therefore do not lend themselves to the mere inflation of surplus. These arrangements may be subject to regulatory approval.

19. Transactions involving services provided between related parties shall be recorded at the amount charged. Regulatory scrutiny of related party transactions where amounts charged for services do not meet the fair and reasonable standard established by Appendix A-440, may result in (a) amounts charged being recharacterized as dividends or capital contributions, (b) transactions being reversed, (c) receivable balances being nonadmitted, (d) or other regulatory action. Expenses that result from cost allocations shall be allocated subject to the same fair and reasonable standards, and the books and records of each party shall disclose clearly and accurately the precise nature and details of the transaction. See Issue Paper No. 94—Allocation of Expenses for additional discussion regarding the allocation of expenses.

**Disclosure**

20. The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions by type of related party may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm’s-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

a. The nature of the relationships involved;

b. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, and any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:
1. Date of transaction,
2. Explanation of transaction,
3. Name of reporting entity,
4. Name of affiliate,
5. Description of assets received by reporting entity,
6. Statement value of assets received by reporting entity,
7. Description of assets transferred by reporting entity, and
8. Statement value of assets transferred by reporting entity.

c. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period;
d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement;
e. Any guarantees or undertakings, written or otherwise, for the benefit of an affiliate or related party which result in a material contingent exposure of the reporting entity’s or any related party’s assets or liabilities;
f. A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party. This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements and agency contracts, which remove assets otherwise recordable (and potentially nonadmitted) on the reporting entity’s financial statements;
g. The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity significantly different from those that would have been obtained if the enterprises were autonomous. The relationship shall be disclosed even though there are no transactions between the enterprises.
h. The amount deducted from the value of an upstream intermediate company or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated company, in accordance with the NAIC Purposes and Procedures of the Securities Valuation Office, “Procedures for Valuing Common Stocks and Stock Warrants.”

DISCUSSION:

21. This issue paper adopts FASB Statement No. 57, Related Party Disclosures (FAS 57) with a modification to paragraph 2, to require disclosure of compensation arrangements, expense allowances, and other similar items in the ordinary course of business. It expands the current statutory guidance on accounting and disclosure of transactions with affiliates to include all material related party transactions whereas current statutory guidance requires disclosures for transactions with affiliates, a more narrowly defined group. This modification was made because the nature of dealings with any related party can not be assumed to be at arm’s length. The current statutory guidance with respect to accounting for transfers of assets between affiliates that are considered to be non-economic transactions (generally at lower of cost or market) differs from the GAAP guidance for accounting for transfers and exchanges between companies under common control. Current statutory guidance is considered appropriate because of the need to focus on individual reporting entities and the needs of individual states to monitor the obligations.
of individual reporting entities. GAAP guidance is established in Accounting Interpretations of APB Opinion No. 16, #39, Transfers and Exchanges Between Companies Under Common Control (AIN-APB 16, #39), which requires transfers and exchanges to be at historical cost similar to that in pooling of interests accounting. As a result, this issue paper rejects AIN-APB 16, #39. The complete requirements under current statutory guidance and FAS 57 are included in the Relevant Statutory Accounting and GAAP Guidance section below.

22. This issue paper adopts the current statutory guidance with respect to accounting for transfers of assets between affiliates and further expands that guidance to include all transactions (including transactions which relate to the transfer of liabilities) with related parties. It also replaces the 30 day rule by requiring the reversal of any gain or loss recognized on a transaction that subsequently does not meet the appearance of permanence. This issue paper also requires any net increase in the surplus of a parent reporting entity that results from transactions between affiliates where there is no demonstrable and measurable betterment to the parent company reporting entity other than the mere inflation of surplus to be reported as a deferred gain and shall not be recognized by the parent reporting entity until an arms length transaction with a third party gives rise to the recognition.

23. This issue paper adopts current statutory guidance with modification to recognize loans made to a reporting entity’s parent or principal owner as an admitted asset if regulatory approval for the transaction has been obtained and the loan appears to be collectible based on the parent’s independent ability to pay. Commissioner approval is considered necessary as an additional independent evaluation of such loans or advances due to the highly sensitive nature of such transactions and the significant potential for abuse. This independent evaluation is considered necessary to determine the admissibility of such loans or advances because a reporting entity could be induced by its parent or principal owner to enter into a loan or advance that it would not otherwise consider. Additionally, advances to providers under capitation arrangements that exceed one month’s payment shall be nonadmitted. Loans to all other related parties shall be nonadmitted if they do not meet the criteria of an arm’s length transaction. Current statutory accounting requires disclosures to include a description of related party transactions as well as other information necessary to obtain an understanding of the transaction. Subparagraph 20 b amends the exclusion to this requirement from non-insurance transactions which involve less than 1/2% of 1% of the total assets of the largest affiliated reporting entity to non-insurance transactions which involve less than 1/2% of 1% of the total admitted assets of the reporting entity.

24. The accounting and disclosure requirements adopted by the conclusion above are consistent with the Statement of Concepts which states:

Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.

Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity’s short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g. notes to financial statements, management’s discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided.

25. Additionally, such disclosures provide the statutory financial statement user information necessary in evaluating a reporting entity’s statutory financial position and results of operations and in assessing the reporting entity’s dependence on such relationships to continue operations.
Drafting Notes/Comments
- Accounting for investments in subsidiaries is addressed in Issue Paper No. 46 - Accounting for Investments in Subsidiary, Controlled and Affiliated Entities.
- Accounting for business combinations is addressed in Issue Paper No. 68 - Business Combinations and Goodwill.
- Accounting for holding company obligations are addressed in Issue Paper No. 95 - Holding Company Obligations.
- Accounting and disclosures for related party reinsurance transactions are addressed in Issue Paper No. 74 - Life, Deposit-Type and Accident and Health Reinsurance and Issue Paper No. 75 - Property and Casualty Reinsurance.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
26. The NAIC Annual Statement Instructions for Life and Accident and Health Insurance Companies (Annual Statement Instructions) provide the following guidance with respect to reporting information on transactions with affiliates in the notes to the financial statements:

5. Information Concerning Parent, Subsidiaries and Affiliates

Instruction:

a. If the company is directly or indirectly owned or controlled by any other company, corporation, group of companies, partnership or individual, give full particulars.

b. List and describe transactions by the company or any affiliated insurer with any affiliate. Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total assets of the largest affiliated insurer, and cost allocation transactions that are based upon generally accepted accounting principles. The following information should be provided:

1. Date of transaction.
2. Explanation of transaction,
3. Name of insurer,
4. Name of affiliate,
5. Description of assets received by insurer,
6. Statement value of assets received by insurer,
7. Description of assets transferred by insurer,
8. Statement value of assets transferred by insurer.

c. If the company holds investments in its parent, affiliates, or subsidiaries, disclose the total statement value for each such asset category not included in Schedule D, Summary By Country.

d. If the Company owns shares of an upstream intermediate or ultimate parent, either directly or indirectly via a downstream subsidiary, controlled or affiliated company, disclose the amount deducted from the value of such company or companies, in accordance with the Purposes and Procedures manual of the Securities Valuation Office of the NAIC.

e. Describe any guarantees or undertakings for the benefit of an affiliate which result in a material contingent exposure of the company's or any affiliated insurer's assets to liability, if not disclosed in Note 15. Report the total amount of guarantees for affiliates.
f. Describe management or service contracts and all cost-sharing arrangements, other than cost allocation arrangements based upon generally accepted accounting principles, involving the company or any affiliated insurer.

27. The Annual Statement Instructions provide illustrations for the above required disclosures.

28. The Annual Statement Instructions also require the preparation of Schedule Y - Information Concerning Activities of Insurer Members of a Holding Company Group. Part 2 of this schedule—Summary of Insurer's Transactions with Any Affiliates—was designed to provide an overview of transactions among holding company system members. A common schedule is prepared for inclusion in each of the individual annual statements and the consolidated annual statement. The intent of the schedule is to demonstrate the scope and direction of major fund and/or surplus flows throughout the holding company system. The instructions to the schedule provide detailed guidance on a column by column basis. This schedule requires additional disclosures that are not required or are in more detail than the information contained in the notes to the financial statements. The instructions for the schedule include the following guidance:

Include the aggregate transactions, for the reporting period, within each category involving the parent company (companies), all insurance companies in the Holding Company System, and all other companies in the system with which an insurance company member had a transaction. Exclude: transactions of a non-insurer with an insurance company that are of a routine nature (i.e., the purchase of insurance coverage) and cost allocation transactions that are based upon generally accepted principles of accounting.

If the insurer is both a payor and a recipient of amounts in any category, the net of these amounts should be reported on one line. Amounts of transactions that result in an increase in surplus should be shown as positive figures and transactions that result in a decrease in surplus should be reported enclosed in parentheses.

If the nature of the transactions reported in Part 2 require explanation, report such in an explanatory note immediately following Part 2.

29. The NAIC Annual Statement Instructions for Property and Casualty Insurance Companies contain guidance substantially consistent with paragraphs 26 to 28 above.

30. The NAIC Annual Statement Instructions for Health Maintenance Organizations contain guidance substantially consistent with paragraphs 26 to 28 above.

31. The Introduction to the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies provides the following definition of terms used in connection with transactions with affiliates:

"Arm's-length" Transactions

An "arm's-length" transaction can be defined as a transaction in which a willing buyer and a willing seller, each being reasonably aware of all relevant facts and neither under compulsion to buy or sell, would be willing to participate.
"Affiliate"

An "affiliate" of, or person "affiliated" with a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

"Control"

The term "control" (including the terms "controlling by" and "under common control with") means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies, representing 10% or more of the voting securities of any other person.

32. The Introduction to the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies provides the following guidance with respect to accounting for assets transferred between affiliates:

Accounting for Assets Transferred Between Affiliates

Economic vs. Non-economic Gains

An economic transaction is an arm's-length transaction which results in the transfer of risks and rewards of ownership and represents a consummated act thereof, i.e. "permanence." Such a transaction must represent a bona fide business purpose demonstrable in measurable terms, such as the creation of a tax benefit, a betterment in cash flow position, etc. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction.

A bona fide business purpose would exist, for example, if an asset was transferred in order to create a specific advantage/benefit. The advantage/benefit must inure to the benefit of the insurance company. A bona fide business purpose would not exist if the transaction was initiated for the purpose of the inflation (deflation) of a particular company's financial statements including effects on the balance sheet or income statement.

Transfer of risks and rewards of ownership - "determining that the risks and other incidents of ownership have been transferred to the buyer requires an examination of the underlying facts and circumstances. The following circumstances may raise the question about the transfer of risks:

1. A continuing involvement by the seller in the transaction or in the assets transferred, such as through the exercise of managerial authority to a degree usually associated with ownership, perhaps in the form of a remarketing agreement or a commitment to operate the property.

2. Absence of significant financial investment by the buyer in the asset transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer.

3. Repayment of debt that constitutes the principal consideration in the transaction dependent on the generation of sufficient funds from the asset transferred.

4. Limitations or restrictions on the purchaser's use of the asset transferred or on the profits from it.
5. Retention of effective control of the asset by the seller.

The first three items on the list are suggested by the Securities Exchange Commission Staff Accounting Bulletin 30; the last two are found in SEC Accounting Series Release No. 95, “Accounting for Real Estate Transactions where circumstances indicate that profits were not earned at the time the transactions were recorded”.*

Security swaps of similar issues between or amongst affiliated companies would be considered as a non-economic transaction. Swaps of dissimilar issues accompanied by exchanges of liabilities between or amongst affiliates are considered non-economic transactions.

The appearance of permanence is also an important criterion in establishing the economic substance of a transaction. If subsequent events or transactions reverse the effect of an earlier transaction, the question is raised as to whether economic substance existed in the case of the original transaction. Basically, in order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed.

It is important to note that in today’s environment, where many of the transactions are complex and involve great uncertainty, it will be necessary to exercise professional judgment in the evaluation of whether economic substance exists as it is not possible to establish detailed guidelines sufficient to cover the realm of all possible transactions.

In the case of any gain from transfer of securities or other assets to an affiliate where it appears that, within a period beginning 30 days before the date of such transfer and ending 30 days after such date, the company has acquired by transfer from an affiliate, or has entered into a contract or option to acquire, substantially identical securities or assets, then no gain on the transfer to the affiliate shall be recognized in the Annual Statement.

The following is the exception to the 30-day rule:

1. Swaps of repurchased securities. The agreements must be formalized in writing and provide adequate collateral as defined by either statute or security valuation manual.

2. Gains on transfers which involve real estate will not be recognized if transferred back or repurchased within an 18-month period.

**General Accounting Guidelines**

When accounting for a specific transaction, the following valuation methods should be used. If the transaction involves the transfer of assets not covered by the attached [table] then the following general guidelines should be used:

- Economic based transfers between affiliates should be recorded at prevailing fair market values at the date of the transfer.

- Non-economic based transfers between affiliated insurers should be recorded at the lower of existing book values or prevailing fair market values at the date of transfer.

- Non-economic based transfers between an insurer and a non-insurance affiliate should be recorded at the prevailing fair market value at the date of transfer; however, to the extent that the transfer results in a gain, that gain should be deferred until such time as permanence can be verified.
Transactions which are designed to avoid statutory accounting practices shall be included as if the insurer continued to own the assets directly instead of through a subsidiary. Therefore, the assets of a subsidiary will be valued as they would constitute lawful investments for the insurer if acquired or held by the insurer. (e.g., transaction dealing with agents' balances, furniture and equipment.)

- Assets may be valued on a different basis if held by a life insurer versus a property and casualty insurer; therefore, a regulator must take this into consideration when using the general guidelines.

- In the absence of specific guidelines or where doubt exists as to the propriety of a special accounting method the Insurance Department of the state of domicile should be consulted.

(2) Based on current market interest rates.
(3) LCM (Lower of Cost or Market) would apply under scenario involving depreciated assets.

33. The Insurance Holding Company System Model Laws, Regulations and Guidelines, which has been adopted by various states, specifies that certain disclosures be made in Form B of an insurer's...
registration statement (insurers required to file registration statements with the NAIC do so on the format prescribed by the NAIC). Form B instructions are as follows:

ITEM 5. TRANSACTIONS AND AGREEMENTS

Briefly describe the following agreements in force, and transactions currently outstanding or which have occurred during the last calendar year between the registrant and its affiliates:

a. Loans, other investments, or purchases, sales or exchanges of securities of the affiliates by the Registrant or of the Registrant by its affiliates;

b. Purchases, sales or exchanges of assets;

c. Transactions not in the ordinary course of business;

d. Guarantees or undertakings for the benefit of an affiliate which result in an actual contingent exposure of the Registrant's assets to liability, other than insurance contracts entered into in the ordinary course of the registrant's business;

e. All management agreements, service contracts and all cost-sharing arrangements;

f. Reinsurance agreements;

g. Dividends and other distributions to shareholders;

h. Consolidated tax allocation agreements; and

i. Any pledge of the registrant's stock and/or of the stock of any subsidiary or controlling affiliate, for a loan made to any member of the insurance holding company system.

No information need be disclosed if such information is not material for purposes of Section 4 of the Act.

Sales, purchases, exchanges, loans or extensions of credit, investments or guarantees involving one-half of 1% or less of the registrant's admitted assets as of the 31st day of December next preceding shall not be deemed material.

Note: Commissioner may by rule, regulation or order provide otherwise.

The description shall be in a manner as to permit the proper evaluation thereof by the Commissioner, and shall include at least the following: the nature and purpose of the transaction, the nature and amounts of any payments or transfers of assets between the parties, the identity of all parties to the transaction, and relationship of the affiliated parties to the registrant.

34. Section 5 of the Insurance Holding Company System Regulatory Act also contains the following guidance:

(2) The following transactions involving a domestic insurer and any person in its holding company system may not be entered into unless the insurer has notified the commissioner in writing of its intention to enter into the transaction at least thirty (30) days prior thereto, or such shorter period as the commissioner may permit, and the commissioner has not disapproved it within that period.

(a) Sales, purchases, exchanges, loans, extensions of credit, or investments, provided the transactions are equal to or exceed:
(i) With respect to nonlife insurers, the lesser of three percent (3%) of the insurer's admitted assets or twenty-five percent (25%) of surplus as regards policyholders as of the 31st day of December next preceding;

(ii) With respect to life insurers, three percent (3%) of the insurer's admitted assets as of the 31st day of December next preceding;

(b) Loans or extensions of credit to any person who is not an affiliate, where the insurer makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the insurer making the loans or extensions of credit.

35. The NAIC Model Law for HMO Investment Guidelines, contains the following:

Section 3. Excessive Commissions Prohibited—Interest of Officers and Directors.

(2) No such HMO shall knowingly invest in or loan upon any property, directly or indirectly, whether real or personal, in which any officer or director of such HMO has a financial interest, nor shall any such HMO make a loan of any kind to any officer or director of such HMO, except that this Section shall not apply in circumstances where the financial interest of such officer or director is only nominal, trifling or so remote as not to give rise to a conflict of interest. In any case, the Director may approve a transaction between an HMO and its officers or directors under this Section if he is satisfied that (a) the transaction is entered into in good faith for the advantage and benefit of the company, and (b) the amount of the proposed investment or loan does not violate any other provision of this Article nor exceed the reasonable, normal value of the property or the interest which the HMO proposed to acquire, and that the transaction is otherwise fair and reasonable, and (c) the transaction will not adversely affect, to any substantial degree, the liquidity of the company's investments or its ability thereafter to comply with requirements of this Article or the payment of its claims and obligations.

36. The NAIC Financial Condition Examiners Handbook, Section I, Part IV, Conducting Examinations, contains the following guidance:

a. Affiliates Defined

Affiliates exist when there is a relationship that offers the potential for self-dealing, transactions at less than arm's length, favorable treatment, or the ability to direct the outcome of events differently from what might result in the absence of that relationship.

Some examples of affiliates are:

- A company's affiliates
- Principal owners
- Management (including directors)
- Entities for which investments are accounted for by the equity method
- Pension and profit-sharing trusts managed by or under the trusteeship of management

An affiliate also includes any other person with which the reporting entity may deal if one party controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interests. A third person also is affiliated if it can significantly influence the management or operating policies of the transacting parties or if it has an ownership interest in one of the transacting parties and can
significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests.

b. Affiliated Transactions Defined

An affiliated transaction is any direct or indirect transaction between the reporting entity and an affiliate. Affiliated Transactions include transactions between:

- A parent company and its subsidiaries
- Subsidiaries of a common parent
- The reporting entity and:
  (1) Other affiliated businesses
  (2) Management (including directors)
  (3) Principal owners
  (4) Pension and profit-sharing trusts managed by or under the trusteeship of management
  (5) Other parties having the ability to exert significant influence

Generally Accepted Accounting Principles

37. FAS 57 provides the following guidance:

INTRODUCTION

1. The FASB has been asked to provide guidance on disclosures of transactions between related parties. Examples of related party transactions include transactions between (a) a parent company and its subsidiaries; (b) subsidiaries of a common parent; (c) an enterprise and trusts for the benefit of employees, such as pension and profit-sharing trusts that are managed by or under the trusteeship of the enterprise's management; (d) an enterprise and its principal owners, management, or members of their immediate families; and (e) affiliates. Transactions between related parties commonly occur in the normal course of business. Some examples of common types of transactions with related parties are: sales, purchases, and transfers of realty and personal property; services received or furnished, for example, accounting, management, engineering, and legal services; use of property and equipment by lease or otherwise; borrowings and lendings; guarantees; maintenance of bank balances as compensating balances for the benefit of another; intercompany billings based on allocations of common costs; and filings of consolidated tax returns. Transactions between related parties are considered to be related party transactions even though they may not be given accounting recognition. For example, an enterprise may receive services from a related party without charge and not record receipt of the services.

--------

1 Terms defined in the glossary (Appendix B) are in boldface type the first time they appear in this Statement.

--------

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Disclosures

2. Financial statements shall include disclosures of material related party transactions, other than compensation arrangements, expense allowances, and other similar items in the ordinary course of business. However, disclosure of transactions that are eliminated in the preparation of consolidated or combined financial statements is not required in those statements. The disclosures shall include:

--------

2 The requirements of this Statement are applicable to separate financial statements of each or combined groups of each of the following: a parent company, a subsidiary, a corporate joint venture, or a 50-percent-
or-less owned investee. However, it is not necessary to duplicate disclosures in a set of separate financial statements that is presented in the financial report of another enterprise (the primary reporting enterprise) if those separate financial statements also are consolidated or combined in a complete set of financial statements and both sets of financial statements are presented in the same financial report.

3 In some cases, aggregation of similar transactions by type of related party may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed.

--------

a. The nature of the relationship(s) involved

b. A description of the transactions, including transactions to which no amounts or nominal amounts were ascribed, for each of the periods for which income statements are presented, and such other information deemed necessary to an understanding of the effects of the transactions on the financial statements

c. The dollar amounts of transactions for each of the periods for which income statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period

d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement

3. Transactions involving related parties cannot be presumed to be carried out on an arm's length basis, as the requisite conditions of competitive, free-market dealings may not exist. Representations about transactions with related parties, if made, shall not imply that the related party transactions were consummated on terms equivalent to those that prevail in arm's length transactions unless such representations can be substantiated.

4. If the reporting enterprise and one or more other enterprises are under common ownership or management control and the existence of that control could result in operating results or financial position of the reporting enterprise significantly different from those that would have been obtained if the enterprises were autonomous, the nature of the control relationship shall be disclosed even though there are no transactions between the enterprises.

38. For purposes of FAS 57, certain terms are defined as follows:

a. Affiliate. A party that, directly or indirectly through one or more intermediaries, controls, is controlled by, or is under common control with an enterprise.

b. Control. The possession, direct or indirect, of the power to direct or cause the direction of the management and policies of an enterprise through ownership, by contract, or otherwise.

c. Immediate family. Family members whom a principal owner or a member of management might control or influence or by whom they might be controlled or influenced because of the family relationship.

d. Management. Persons who are responsible for achieving the objectives of the enterprise and who have the authority to establish policies and make decisions by which those objectives are to be pursued. Management normally includes members of the board of directors, the chief executive officer, chief operating officer, vice presidents in charge of principal business functions (such as sales, administration, or finance), and other persons who perform similar policy making functions. Persons without formal titles also may be members of management.
e. Principal owners. Owners of record or known beneficial owners of more than 10 percent of the voting interests of the enterprise.

f. Related parties. Affiliates of the enterprise; entities for which investments are accounted for by the equity method by the enterprise; trusts for the benefit of employees, such as pension and profit-sharing trusts that are managed by or under the trusteeship of management; principal owners of the enterprise; its management; members of the immediate families of principal owners of the enterprise and its management; and other parties with which the enterprise may deal if one party controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interests. Another party also is a related party if it can significantly influence the management or operating policies of the transacting parties or if it has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests.

39. GAAP literature acknowledges the basic problem of when to use predecessor basis vs. fair value or exchange price in accounting for transfers of noncash assets between related parties. Guidance on accounting for transfers of assets between affiliated companies includes the discussion section of EITF 85-21. This indicates that the SEC staff require transfers of assets between companies under common control or between a parent and its subsidiary be valued at their historical cost in the separate statements of each entity that is a party to the transaction. These views relate primarily to transfers of net assets (as in a business combination) or long-lived assets. The form of consideration, whether cash or other, does not change the method of accounting. Any excess paid over the historical cost is treated as a reduction of equity. Certain excerpts follows:

The SEC Observer stated that the SEC staff's views on carrying over historical cost to record, in the separate financial statements of each entity, transfers between companies under common control or between a parent and its subsidiary run primarily to transfers of net assets (as in business combination) or long-lived assets. Those views would not normally apply to recurring transactions for which valuation is not in question (such as routine transfers of inventory) in the separate financial statements of each entity that is a party to the transaction.

The Task Force members were not in agreement as to whether new basis accounting is acceptable for privately held companies. One Task Force member indicated that the authoritative literature could be read to support the practice. One Task Force member indicated that a concept of the reporting entity would be helpful. Some Task Force members indicated a need for FASB guidance.

40. EITF 84-39 discusses the transfer of monetary and nonmonetary assets among individuals and entities under common control. Certain excerpts follow:

ISSUE
When an asset (for example, real estate) is transferred from an individual to a corporation controlled by that individual in exchange for cash of stock, should the corporation record the transferred property at its fair value at the date of transfer or at its cost to the individual.

EITF DISCUSSION
The Task Force did not reach a consensus on this issue.

Task Force members noted that diversity in practice in certain specific types of transactions, with some members starting from a presumption that carrying amounts should be adjusted to fair value at the date of transfer, while others preferred no change in carrying amount until an asset leaves the controlled group.
41. Accounting Interpretations of APB Opinion No. 16 (AIN-APB 16, #39) discusses transfers and exchanges between companies under common control:

Question - Paragraph 5 of APB Opinion No. 16 states the Opinion does not apply to a transfer of net assets or to an exchange of shares between companies under common control. What are some examples of the types of transactions excluded from the Opinion by this provision and what accounting should be applied?

Interpretation - In general, paragraph 5 excludes transfers and exchanges that do not involve outsiders. For example, a parent company may transfer the net assets of a wholly owned subsidiary into the parent company and liquidate the subsidiary, which is a change in legal organization but not a change in the entity. Likewise, a parent may transfer its interest in several partially owned subsidiaries to a new wholly owned subsidiary, which is again a change in legal organization but not in the entity. Also, a parent may exchange its ownership or the net assets of a wholly owned subsidiary for additional shares issued by the parent's partially owned subsidiary, thereby increasing the parent's percentage of ownership in the partially owned subsidiary but leaving all of the existing minority interest outstanding.

None of the above transfers or exchanges is covered by APB Opinion No. 16. The assets and liabilities so transferred would be accounted for at historical cost in a manner similar to that in pooling of interests accounting.

It should be noted, however, that purchase accounting applies when the effect of a transfer or exchange is to acquire all or part of the outstanding shares held by the minority interest of a subsidiary (see paragraph 43). The acquisition of all or part of a minority interest, however acquired, is never considered a transfer or exchange by companies under common control. (See Interpretation No. 26 of APB No. 16, "Acquisition of Minority Interest." )

Statutory Issue Paper No. 26

Title:
Bonds, excluding Loan-backed and Structured Securities

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory guidance for bonds is contained in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. That guidance also establishes the NAIC's Securities Valuation Office (SVO) as an authority for the valuation of bonds.

2. The purpose of this paper is to establish statutory accounting principles for bonds, excluding loan-backed and structured securities (which are covered in Issue Paper No. 43 - Loan-backed and Structured Securities (Issue Paper No. 43)) that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. Bonds shall be defined as any securities representing a creditor relationship, whereby there is a fixed schedule for one or more future payments. This definition includes U.S. Treasury securities, U.S. government agency securities, municipal securities, corporate bonds, bank participations, convertible debt, certificates of deposit and commercial paper that have a fixed schedule of payments and a maturity date in excess of one year from the date of acquisition. Loan-backed and structured securities meet this definition, but are excluded from the scope of this issue paper, and are addressed in Issue Paper No. 43. Securities which meet the definition above, but have a maturity date of one year or less from the date of acquisition are addressed in Issue Paper No. 28 - Short-term Investments. Mortgage loans and other real estate lending activities made in the ordinary course of business meet the definition above, but are not addressed in this issue paper. These types of transactions are addressed in issue papers 37 and 39.

4. Bonds meet the definition of assets as defined in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets, and are admitted assets to the extent they conform to the requirements of this paper.

Acquisitions and Sales

5. A bond acquisition or disposal shall be recorded on the trade date, not the settlement date except for the acquisition of private placement bonds which shall be recorded on the funding date. At acquisition, bonds shall be reported at their cost, including brokerage and other related fees, which cannot exceed the fair market value at the date of acquisition.

6. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses on sales of bonds shall be in accordance with Issue Paper No. 7 - Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an IMR, realized gains and losses on sales of bonds shall be recorded on the trade date, and shall be reported on the net realized capital gains or losses line of the Investment Income section of the Underwriting and Investment Exhibit.
Amortized Cost
7. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond. Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer’s discretion) shall be amortized to the call or maturity value/date which produces the lowest asset value (yield to worst).

Balance Sheet Amount
8. Bonds shall be valued and reported in accordance with the NAIC Valuations of Securities manual prepared by the Securities Valuation Office (Valuations of Securities manual). For reporting entities that maintain an Asset Valuation Reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair market value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair market value.

Impairment
9. If it is determined that a decline in the fair market value of a bond is other than temporary, the cost basis of the bond shall be written down to fair market value as a new cost basis and the amount of the write down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in fair market value. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition. A decline in fair market value which is other than temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value (i.e., amortized cost). This is consistent with Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets.

Income
10. Interest income for any period consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of bonds, and the addition of discount accrual. In accordance with Issue Paper No. 34 - Investment Income Due and Accrued, investment income shall be reduced for amounts which have been determined to be uncollectible. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

11. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

Origination Fees
12. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction such as the private placement of bonds. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the bond consistent with paragraph 7 of this issue paper. Other origination fees shall be recorded in income immediately.
Origination, Acquisition, and Commitment Costs
13. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the bond, consistent with paragraph 5 of this issue paper. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase or commitment to purchase bonds shall be charged to expense when incurred.

Commitment Fees
14. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the bond is issued. If the bond is not issued then the fees shall be recorded as investment income by the reporting entity when the commitment expires. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 7 of this issue paper over the life of the bond as an adjustment to the investment income on the bond. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Loaned Bonds
15. When bonds are loaned, they remain assets of the reporting entity and are not removed from the accounting records as the reporting entity remains the owner of the bonds. When collateral is provided for the general use of the reporting entity, the asset is recorded and the admissibility of the asset is determined as if the reporting entity owned the collateral asset. A liability for the return of that collateral must be established. When collateral not available for the general use of the reporting entity is provided, it should not be recognized as an asset of the reporting entity. When non-cash collateral is provided, the current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned bonds/securities.

Wash Sales
16. When a bond is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales, and shall be accounted for as sales and disclosed as required by paragraph 19. Unless there is a concurrent contract to repurchase or redeem the transferred bond from the transferee, the transferor does not maintain effective control over the bond.

17. For the securities to be substantially the same, the criteria set forth in paragraph 28 of FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (FAS 125) must be met.

Exchanges and Conversions
18. If a bond is exchanged or converted into other securities, the fair value of the bond surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. If the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the bond surrendered then it shall become the cost basis for the new securities. This is consistent with Issue Paper No. 73 - Nonmonetary Transactions.

Disclosures
19. The following disclosures shall be made for bonds in the notes to the financial statements:
- Fair values in accordance with Issue Paper No. 33 - Disclosures about Fair Value of Financial Instruments;
- Concentrations of credit risk in accordance with Issue Paper No. 27 - Disclosures of Information about Financial Instruments with Concentrations of Credit Risk;
- The basis at which the bonds are stated;
- Amortization method;
- Description of any loaned bonds, including the amount, description of the collateral and whether or not the collateral is restricted;
- Reporting entities shall disclose the following information for wash sales, as defined in paragraph 16, involving transactions for securities with a NAIC designation of 3 or below, or unrated:
  a. A description of the reporting entity’s objectives regarding these transactions;
  b. An aggregation of transactions by NAIC Designation 3 or below, or unrated;
  c. The number of transactions involved during the reporting period;
  d. The book value of securities sold;
  e. The cost of securities repurchased;
  f. The realized gains/losses associated with the securities involved.

DISCUSSION:

20. The statutory accounting principles described in the summary conclusion section are consistent with current statutory accounting guidance for bonds, except as follows:

- Paragraphs 5 and 6 require bond acquisitions and dispositions to be recorded on the trade date, whereas current statutory guidance is silent.

- Paragraph 9 contains an impairment test that is not contained in the current statutory guidance, but which is considered consistent with the conservatism concept in the Statement of Concepts.

- Paragraph 11 requires that prepayment penalties and acceleration fees received from the liquidation of an investment prior to its maturity date be recorded as investment income. Current statutory accounting guidance allows for prepayment penalties and acceleration fees to be recorded as either capital gains or investment income.

- Paragraph 16 provides guidance on sales and subsequent repurchases of bonds which is intended to prevent “window dressing.”

21. This issue paper adopts AICPA Statement of Position 90-11, Disclosure of Certain Information by Financial Institutions About Debt Securities Held as Assets and AICPA Practice Bulletin No. 4, Accounting for Foreign Debt/Equity Swaps. This issue paper rejects the GAAP guidance for debt securities, which is contained in FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities (FAS 115), FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases (FAS 91), FASB Emerging Issues Task Force No. 89-18, Divestitures of Certain Investment Securities to an Unregulated Commonly Controlled Entity under FIRREA, and FASB Emerging Issues Task Force No. 96-10, Impact of Certain Transactions on Held-to-Maturity Classifications Under FASB Statement No. 115. The primary differences between the statutory accounting principles established in this issue paper and GAAP are as follows:
- FAS 115 requires investments in debt securities to be classified into three categories: held-to-maturity, available-for-sale and trading. Held-to-maturity securities are reported at amortized cost. Available-for-sale are reported at fair value, with unrealized gains or losses reported as a separate component of shareholders' equity. Trading securities are reported at fair value, with unrealized gains or losses included in earnings.

- GAAP does not require reporting of AVR or IMR and requires that realized gains and losses be included in income when realized.

- FAS 91 generally requires amortization of the security premium or discount over the remaining life of the security.

- FAS 91 allows deferral of certain origination costs.

22. This paper is consistent with Issue Paper No. 45, Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements, in defining what criteria must be met in order for securities to be considered substantially the same. Issue Paper No. 45 adopts paragraph 28 of FAS 125 and AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position (SOP 90-3).

23. The statutory accounting principles established in this issue paper, attempt to smooth the effect upon a reporting entity’s surplus of fair market value fluctuation of investments held by the reporting entity. This is consistent with the Statement of Concepts which states that "conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results." Statutory accounting principles for life insurance companies also use the concept of AVR and IMR adjustments to compensate for fair market value fluctuations over time.

Drafting Notes/Comments:
- Loan-backed and structured securities are addressed in Issue Paper No. 43 - Loan-backed and Structured Securities.
- Repurchase and reverse repurchase agreements are addressed in Issue Paper No. 45 - Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements.
- AVR and IMR are addressed in Issue Paper No. 7 - Asset Valuation Reserve and Interest Maintenance Reserve.
- Short-term investments are addressed in Issue Paper No. 28 - Short-term Investments.
- The value of a CMO special purpose subsidiary is addressed in Issue Paper No. 86 - Securitization.
- Investment income due and accrued is addressed in Issue Paper No. 34 - Investment Income Due and Accrued.
- Securities not yet valued by the SVO will follow SVO procedures for valuing such securities as being drafted by the SVO as directed by the Invested Asset Working Group of the Valuation of Securities (EX4) Task Force.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
24. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies, Chapter 1, Bonds and Loaned Backed and Structured Securities, states:

Bonds are obligations issued by business units, governmental units, and certain nonprofit units, and having a fixed schedule for one or more future payments of money. This definition includes
commercial paper, negotiable certificates of deposit, repurchase agreements, collateralized mortgage obligations (CMOs), mortgage participation certificates (MPCs), interest-only and principal-only certificates (IOs and POs), and equipment trust certificates. Governmental bonds may be classified as general obligation bonds secured by revenue from a restricted source. Corporate bonds are either secured by a claim to mortgage assets or other specific collateral, or by the general credit of the corporation, i.e., debentures. Such investments may be public issues or private placements. Bonds held for investment generate interest income to the investor. Their sale may result in capital gain or loss.

Bonds that pay interest at a rate greater than that which the market requires of similarly rated securities will sell at a "premium" above the face amount of the bond. Bonds with interest rates below the current market will sell at a "discount" from the face amount.

Authorizations and Limitations

Bonds may be subject to qualitative limitations determined by state regulations. For example, a U.S. Treasury Note may have no investment limitations while a railroad bond may have stringent restrictions, both individual (one particular railroad corporation) and in the aggregate (all railroad bonds).

Valuation

Bonds are generally valued at cost adjusted, i.e., amortized, to bring the value to par at maturity. Except for privately placed issues, cost cannot exceed the market value at the date of acquisition, including brokerage and other related fees. Carrying value should not exceed the call price for any particular issue.

Most bond holdings are subject to amortization under the valuation standards of the National Association of Insurance Commissioners and are to be carried at amortized cost. Bonds that do not qualify for amortization according to the NAIC Valuations of Securities manual are to be carried at the value contained in the manual or at book value, whichever is lower. Bonds not listed in the manual, or obligations listed with no value, require the determination of an acceptable value that can be justified to the appropriate regulatory agency.

The Valuation of Securities Task Force has classified bonds into six categories according to whether the bond can be amortized for establishing the investment value to be used in financial statements. A complete description of the NAIC's classification system, valuation bases to be applied, and the requirements and tests used in the classification of bonds may be obtained by reference to the Valuations of Securities manual, produced by the NAIC.

Most regulatory agencies reserve the privilege of directing the valuation of a specific obligation either not listed in the Valuations of Securities manual or affected by a material financial disclosure subsequent to the annual publication. Investments in foreign securities are accounted for in much the same manner. Procedures for valuation and conversion into U.S. currency are prescribed in the Valuations of Securities manual.

Nonadmitted Bonds

Bond classification as admitted assets varies at the discretion of the states. A bond may be classified as a nonadmitted asset to the extent that it fails a qualitative or quantitative limitation test or is otherwise unauthorized as outlined by the applicable state code. A certain percentage of such investments otherwise not qualifying for investment is commonly permitted by the state codes under a blanket clause or "basket provision" limiting the total quantity of these and other similar investments as a function of net admitted assets or surplus, or both.
For bonds not eligible for amortization, the difference between the amortized (book) value and the association (market) value is treated as a nonadmitted asset.

Premium and Discount

On acquisition, bonds are recorded in the general ledger at their cost. For bonds purchased at a premium, there is to be an annual amortization to reduce the recorded cost to par value. In the case of a bond with a call privilege, the amortized value used should be the lowest value produced by using the maturity date or the call features. The annual amortization of premium is normally accounted for as reduction to interest that has been collected during the year.

For bonds purchased at a discount, where cost is less than par value, there is to be an annual accrual of this discount to increase the ledger value to par value at maturity. The annual accrual of discount is generally accounted for as an addition to interest that has been collected during the year.

For bonds secured by U.S. governmental entities, amortization of premium and accrual of discount may require special handling, and the Valuations of Securities manual should be consulted.

Interest Income

If interest (including contingent interest) on a bond is recorded when received, an adjustment must be made to recognize due and accrued interest as of the reporting date. Interest income for any period consists of interest collected during the period and the change in the due and accrued interest between the beginning and end of the period, plus the adjustments for the accrual of discount, minus adjustment for the amortization of premium, and minus adjustment for interest paid on acquisition of bonds.

Contingent interest represents bondholder income generated through the occurrence of specific economic events in relation to the issuer. For example, contingent interest may become payable upon the attainment by the issuer of a given level of cash flow or income. In many respects, bonds with contingent interest provisions are similar to income bonds. Due and unpaid contingent interest may be recorded as income. The proper accrual of such income does, however, require an analysis of the applicable provisions in the underlying agreement and the verification that the prerequisite conditions have been met.

Commitment and Other Origination Fees

Commitment and other origination fees may arise from the private placement of bonds. Commitment fees are charged by the company to the borrower for promising to make available funds for future borrowing at currently specified interest rates. If the fee is not returnable to the borrower and the bond is not issued, the fee should be taken into income immediately. If the fee is returnable only if the bond is issued, it should not be considered income until it is determined that the bond will not be placed. If it is determined that the bond will be issued, the fee should be deferred and amortized using the interest method over the life of the loan. Other fees intended to compensate the company for interest rate risks associated with the commitment may be built into the interest rates specified and thus, if collected, would be amortized into income over the term of the bond.

Fees charged to borrowers for providing services related to the origination of a private placement should be taken into income immediately only if no portion of the loan is retained by the company. Otherwise, recognition of any fees related to the portion of the loan retained for investment purposes should be deferred until issue and amortized into income using the interest method over the life of the loan. Deferred fee income related to loans originated and retained for resale should be recognized upon sale.
Loaned Bonds or Bonds Subject to Reverse Repurchase Agreements

Where the state of domicile permits such activity, bonds may be loaned or placed under reverse repurchase arrangements with authorized brokers or dealers in securities.

When a bond is loaned, collateral consisting of cash and/or cash equivalent is pledged. The pledged collateral is maintained in an escrow account. The statement will continue to report the insurance company as owner of the bond.

The valuation of this bond will remain unaffected by the loan as long as the amount of the collateral is at least equal to the required amount specified in the Valuations of Securities manual. Failure to hold sufficient collateral may result in the admitted asset value being decreased.

26. The Purposes and Procedures of the Securities Valuation Office of the NAIC contains the following guidance:

(B) Corporate Bonds—General Procedure. The analysis to determine an NAIC designation will be made in one of two ways. The first will be the direct use of ratings performed by other recognized rating agencies or organizations. The second will be the use of various security analysis techniques, both quantitative and subjective in nature.

(1) Issuers That Have Securities Rated by Other Recognized Rating Agencies or Organizations.

Ratings of other recognized rating organizations will be translated directly into an NAIC Designation. The SVO staff will have discretionary authority to downgrade ratings of other organizations but not to upgrade. If there are multiple differing ratings the SVO may use the highest rating but may also go lower where indicated. Where one issue of an issuer has a rating, this rating will be used as a benchmark in determining the ratings of other non-rated issues of the same issuer.

A list of the approved agencies and the translation of their ratings into NAIC Designations is presented in Appendix B. To become an NAIC approved rating organization the candidate must submit to the NAIC’s Securities Valuation Office proof that it has been designated a "Nationally Recognized Statistical Rating Organization" (NRSRO) by the Securities and Exchange Commission (SEC) of the Government of the United States of America. Such proof will be acceptable to the NAIC for designation as an NAIC approved rating organization. Rating organizations not so recognized by the SEC may be used by the SVO in its day to day operation when rated entities are not rated by an NAIC approved NRSRO and the quality of such ratings is determined to be substantially similar in quality to those of an NAIC approved NRSRO by SVO staff. The SVO may request whatever documentation deemed necessary to make such a determination. Such rating organizations will not, however, be granted NAIC approved rating organization status.

(2) Issuers of Securities That are Not Rated by Any Other Recognized Rating Organization.

The analysis to determine an NAIC Designation will generally be made up of three segments.

(1) The SVO will apply a quantitative financial model to current and past financial statement data to determine a preliminary measure of the relative financial soundness of the issuer. The result should be expressed as a numeric score which can be ranked against other similar scores and these then related to the various NAIC Designations. It is important to emphasize that the result obtained from the model will not be the sole determinant of an NAIC Designation which determination will be subject to the second and third parts of the analysis which follow.
(2) In the second segment of its analysis the SVO staff will review five years of historical financial data (when available), and any projected data made available to it. This review will cover the balance sheet, the income statement, and the statement of cash flows as obtained from the issuer's financial statements as well as the notes thereto. The staff will also review various standard financial ratios. In addition, the analyst will review the auditors opinion. Furthermore, the SVO analyst is expected to review any news media articles relating to the issuer or research reports that are available. The analysis would also include but is not limited to, a detailed review of the issuer's industry and operating environment as well as the issuer's management/sponsorship, marketing capabilities, and cost structure to determine the extent of the issuer's competitive edge, if any. These characteristics, when viewed in context with the issuer's financial profile, will determine the ability of the company to respond to varying economic scenarios.

The result of the first two foregoing steps will be a judgment by the SVO analyst of the issuer's implied senior unsecured debt paying ability or rating expressed as an NAIC Designation. The ratings of all other securities of the same issuer (including preferred stocks) can be scaled either upwards or downwards based on that securities' relationship to senior unsecured debt in the capital structure as well as the strength of the credit.

(3) The final part of the analysis will focus on factors that are specific to the security under review as opposed to those relevant to the issuer. This will include a review of:

(a) Covenants
(b) Structure
(c) Collateral
(d) Third party financial support or other credit enhancements
(e) Any other factor specific to the security under review

At all times during the analysis the SVO analyst will have complete discretion to extend the investigation to whatever extent deemed necessary in order to arrive at an appropriate NAIC Designation.

(C) Corporate Bonds--Special Factors. All bonds of the following types will be subject to the review procedures of Section 2(B), but the following special factors and statement value considerations will be addressed additionally as indicated.

(1) Collateralized Obligations. The ability of any type of collateral to enhance or fully support the contractual provisions of any security will be taken into account by the SVO only if acceptable documentary evidence is provided. This might include, but is not limited to the filing of the SVO's Collateral Loan form where appropriate, the original due diligence package, appraisal reports, valuations of business entities reports or any other relevant supporting information.

(2) Income Bonds that have paid contingent interest in full for the three most recent years and otherwise meeting the standards of review of Section 2(B) shall be valued on the Annual Statement at amortized cost. The method of amortization shall be straight line. Income bonds not meeting these requirements shall be valued on the Annual Statement at market value.

(3) Perpetual Bonds and Demand Notes not in default and otherwise meeting the requirements of Section 2(B) shall be valued on the Annual Statement at original cost by those insurers maintaining an AVR (see Section 6). All other insurers must value these bonds at market value. Any such bond or note will have its normal NAIC Designation followed by the letter C if the security is eligible for cost treatment.
(4) Church Bonds secured by a mortgage on the church property will have an NAIC Designation determined based on the requirements of Section 2(B) and the appraised value of such property. All others will be reviewed on the basis of sufficient cash flow to meet obligations as they mature.

(5) Oil and Gas Loans. Loans made on the basis of collateralized oil and gas revenues will be reviewed taking into account a reputable petroleum engineer's or geologist's estimates of existing reserves and the related oil and gas pay out and loan payment schedules.

(6) Equipment Trust Certificates will be reviewed first on the basis of an annually submitted SVO collateral valuation form and if that is not submitted then on the credit standing of the certificate issuer.

(7) Certificates of Deposit (negotiable and non-negotiable) will be considered under the general provisions of Section 2(B).

(8) Repurchase Agreements. Securities subject to repurchase agreements will have an NAIC Designation determined in accordance with Section 2(B).

(9) Reverse Repurchase Agreements. Securities subject to reverse repurchase agreements will have an NAIC Designation determined in accordance with Section 2(B) if the cash and/or cash equivalents pledged as collateral is equal to 100% or more of the market value of the financed securities as of the date of the statement. If other than identical securities are returned, the transaction is to be treated as an ordinary purchase and sale.

(10) Commercial Paper will be valued under the general procedures of Section 2(B).

(11) Convertible Bonds. Bonds eligible for amortized value will be so valued while bonds not eligible will be valued at the lower of market value or the then existing amortized value.

(12) New Enterprises created either as startup companies or as business combinations of pre-existing business units will be evaluated on the basis of projected income statements and balance sheets since prior figures are either not available or not meaningful. Insurers must submit such projections in order to justify ratings higher than the lowest quality category.

(13) Loaned Securities. Where permitted by an insurer's state of domicile, bonds loaned to others shall be valued in accordance with Section 2(B) if (i) Acceptable Collateral, as hereinafter defined, is pledged as security for the loan and (ii) except as set forth in the following sentence, the Acceptable Collateral pledged as security is, at the inception of the loan, in an amount equal to 102% of the market value of the loaned bonds. In the event that foreign bonds are the subject of the loan and the denomination of the currency of the Acceptable Collateral is other than the denomination of the currency of the loaned foreign bonds, the amount of Acceptable Collateral that shall be pledged shall be an amount equal to 105% of the market value of the loaned bonds. A decline in value of the acceptable collateral or an increase in the value of the loaned bonds during the term of the loan shall not result in the disqualification from valuation in accordance with Section 2(B) if, during the term the loan is outstanding, additional Acceptable Collateral is posted any time the amount of Acceptable Collateral declines to 100% of the market value of the loaned bonds (or 102% of the market value of the loaned bonds if Acceptable Collateral in an amount equal to 105% was required to be posted at the inception of the loan) in an amount equal to the difference between the 102% and 105%, respectively. For purposes of this provision, Acceptable Collateral shall mean cash and cash equivalents and shall also include securities issued by the U.S. Government or its agencies. The market value of loaned bonds shall include accrued interest on such loaned bonds. Any shortfall in the amount of the actual Acceptable Collateral posted and the required 102% or 105%, as applicable, shall be deducted from the otherwise determined statement value.

(14) Debtor in Possession (DIP) Financing. Such financing will not be considered to be equivalent to the prior existing debt of a bankrupt and reorganizing entity. Instead it will be considered for valuation
based on its superior claim position, collateral coverage, cash flow coverage of debt service and other strengths inherent in the structural factors unique to the DIP lending process.

(15) Bonds of Liquidating Corporations. Securities of such entities will be marked to market by all insurers and accorded on NAIC rating of “6” In the absence of an active market or a reliable quotation, the value of such securities will be analytically determined by the SVO staff, or the SVO, at its discretion, may accept a value determined by an independent organization approved by the SVO.

(16) Distressed Bonds trading at less than 25% of par at the date of valuation and which are not original issue deep discount bonds. Such securities will be marked to market by all insurers regardless of whether they are current as to all contractual provisions at the date of valuation.

(17) Pricing of Privately Placed and Illiquid Publicly Traded Bonds In or Near Default. The pricing of privately placed and illiquid publicly traded bonds will be analytically determined by the SVO staff, or the SVO, at its discretion, may accept a value determined by an independent organization approved by the SVO. The pricing of these securities will be dependent on three primary factors: (1) the ultimate recovery value in cents per dollar of par value expected to be received net of all reasonable costs of a workout or bankruptcy proceeding such as fees for accountants, lawyers, bankers, etc. (2) the expected timing of the receipt of such recovery value and (3) a discount rate to be applied to factors one and two that reflects market rates of discount for defaulted bonds in general adjusted for the current degree of uncertainty existing in the recovery amount.

Four states of recovery are generally recognized by the SVO and different discount rates reflecting more or less uncertainty will be used for securities in each state. These rates will vary with market conditions. The states are:

(a) Newly defaulted bonds where maximum uncertainty as to recovery exists.
(b) Defaulted securities where a preliminary plan of reorganization has been put forth for discussion.
(c) Defaulted securities where a generally agreed to but unsigned plan is on the table.
(d) Defaulted securities where a plan has been agreed to by all parties and a payout date has been set. This is the only case in which estimated value close to 100% of par will be achievable.

(18) Loan-backed and Structured Securities. The SVO encourages insurers to obtain ratings for loan-backed and structured securities submitted for an NAIC designation from an NAIC approved NRSRO. For unrated structured securities acquired by conversion i.e., securitization, refer to Section 6(B)(g)(i) for instructions.

(E) Instructions for Completing Schedule D of the NAIC Annual Statement

The following table indicates the appropriate entries to be made in Schedule D of the NAIC Annual Statement for all bonds except income bonds (see Section 2(C)(1)) and perpetual bonds and demand notes (see Section 2(C)(2)).

(1) For Insurers Maintaining an Asset Valuation Reserve (AVR) (see Section 6)

27. The NAIC Annual Statement Instructions require that the notes to the financial statements of the Annual Statements include the following information to be disclosed about invested assets:

2. Basis of Valuation of Invested Assets

a. Provide a statement of the valuation basis for invested assets, including bonds, stocks, derivative instruments, etc. State the method of amortization of bonds not backed by other loans, loan-backed bonds and structured securities.
Generally Accepted Accounting Principles
28. GAAP guidance is promulgated by FAS 115. Pertinent excerpts are as follows:

Accounting for Certain Investments in Debt and Equity Securities

6. At acquisition, an enterprise shall classify debt and equity securities into one of three categories: held-to-maturity, available-for-sale, or trading. At each reporting date, the appropriateness of the classification shall be reassessed.

Held-to-Maturity Securities

7. Investments in debt securities shall be classified as held-to-maturity and measured at amortized cost in the statement of financial position only if the reporting enterprise has the positive intent and ability to hold those securities to maturity.

Trading Securities and Available-for-Sale Securities

12. Investments in debt securities that are not classified as held-to-maturity and equity securities that have readily determinable fair values shall be classified in one of the following categories and measured at fair value in the statement of financial position:

a. Trading securities. Securities that are bought and held principally for the purpose of selling them in the near term (thus held for only a short period of time) shall be classified as trading securities. Trading generally reflects active and frequent buying and selling, and trading securities are generally used with the objective of generating profits on short-term differences in price. Mortgage-backed securities that are held for sale in conjunction with mortgage banking activities, as described in FASB Statement No. 65, Accounting for Certain Mortgage Banking Activities, shall be classified as trading securities. (Other mortgage-backed securities not held for sale in conjunction with mortgage banking activities shall be classified based on the criteria in this paragraph and paragraph 7.)

b. Available-for-sale securities. Investments not classified as trading securities (nor as held-to-maturity securities) shall be classified as available-for-sale securities.

Reporting Changes in Fair Value

13. Unrealized holding gains and losses for trading securities shall be included in earnings. Unrealized holding gains and losses for available-for-sale securities (including those classified as current assets) shall be excluded from earnings and reported as a net amount in a separate component of shareholders' equity until realized. Paragraph 36 of FASB Statement No. 109, Accounting for Income Taxes, provides guidance on reporting the tax effects of unrealized holding gains and losses reported in a separate component of shareholders' equity.

14. Dividend and interest income, including amortization of the premium and discount arising at acquisition, for all three categories of investments in securities shall continue to be included in earnings. This Statement does not affect the methods used for recognizing and measuring the amount of dividend and interest income. Realized gains and losses for securities classified as either available-for-sale or held-to-maturity also shall continue to be reported in earnings.

Impairment of Securities

16. For individual securities classified as either available-for-sale or held-to-maturity, an enterprise shall determine whether a decline in fair value below the amortized cost basis is other than temporary. For example, if it is probable that the investor will be unable to collect all amounts due according to the contractual terms of a debt security not impaired at acquisition, an other-
than-temporary impairment shall be considered to have occurred.\(^4\) If the decline in fair value is judged to be other than temporary, the cost basis of the individual security shall be written down to fair value as a new cost basis and the amount of the write-down shall be included in earnings (that is, accounted for as a realized loss). The new cost basis shall not be changed for subsequent recoveries in fair value. Subsequent increases in the fair value of available-for-sale securities shall be included in the separate component of equity pursuant to paragraph 13; subsequent decreases in fair value, if not an other-than-temporary impairment, also shall be included in the separate component of equity.

\(^4\)A decline in the value of a security that is other than temporary is also discussed in AICPA Auditing Interpretation, Evidential Matter for the Carrying Amount of Marketable Securities, which was issued in 1975 and incorporated in Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures, as Interpretation 20, and in SEC Staff Accounting Bulletin No.59, Accounting for Noncurrent Marketable Equity Securities.

29. The guidance for the accounting for loan origination costs and commitment fees is contained in FAS 91. Pertinent excerpts are as follows:

### Loan Origination Fees and Costs

5. Loan origination fees shall be deferred and recognized over the life of the loan as an adjustment of yield\(^2\) (interest income). Likewise, direct loan origination costs defined in paragraph 6 shall be deferred and recognized as a reduction in the yield of the loan except as set forth in paragraph 14 (for a troubled debt restructuring). Loan origination fees and related direct loan origination costs for a given loan shall be offset and only the net amount shall be deferred and amortized. The practice of recognizing a portion of loan origination fees as revenue in a period to offset all or part of the costs of origination shall no longer be acceptable.

\(^2\) Methods for recognition of deferred fees and direct loan origination costs over the life of the loan as an adjustment of yield are set forth in paragraphs 18-20.

6. Direct loan origination costs of a completed loan shall include only (a) incremental direct costs of loan origination incurred in transactions with independent third parties for that loan and (b) certain costs directly related to specified activities performed by the lender for that loan. Those activities are: evaluating the prospective borrower's financial condition; evaluating and recording guarantees, collateral, and other security arrangements; negotiating loan terms; preparing and processing loan documents; and closing the transaction. The costs directly related to those activities shall include only that portion of the employees' total compensation and payroll-related fringe benefits directly related to time spent performing those activities for that loan and other costs related to those activities that would not have been incurred but for that loan.

7. All other lending-related costs, including costs related to activities performed by the lender for advertising, soliciting potential borrowers, servicing existing loans, and other ancillary activities related to establishing and monitoring credit policies, supervision, and administration, shall be charged to expense as incurred. Employees' compensation and fringe benefits related to those activities, unsuccessful loan origination efforts, and idle time shall be charged to expense as incurred. Administrative costs, rent, depreciation, and all other occupancy and equipment costs are considered indirect costs and shall be charged to expense as incurred.
Commitment Fees and Costs

8. Except as set forth in subparagraphs (a) and (b) below, fees received for a commitment to originate or purchase a loan or group of loans shall be deferred and, if the commitment is exercised, recognized over the life of the loan as an adjustment of yield or, if the commitment expires unexercised, recognized in income upon expiration of the commitment.

a. If the enterprise's experience with similar arrangements indicates that the likelihood that the commitment will be exercised is remote, the commitment fee shall be recognized over the commitment period on a straight-line basis as service fee income. If the commitment is subsequently exercised during the commitment period, the remaining unamortized commitment fee at the time of exercise shall be recognized over the life of the loan as an adjustment of yield.

b. If the amount of the commitment fee is determined retrospectively as a percentage of the line of credit available but unused in a previous period, if that percentage nominal in relation to the stated interest rate on any related borrowing, and if that borrowing will bear a market interest rate at the date the loan is made, the commitment fee shall be recognized as service fee income as of the determination date.

9. Direct loan origination costs (described in paragraph 6) incurred to make a commitment to originate a loan shall be offset against any related commitment fee and the net amount recognized as set forth in paragraph 8.

Purchase of a Loan or Group of Loans

15. The initial investment in a purchased loan or group of loans shall include the amount paid to the seller plus any fees paid or less any fees received. The initial investment frequently differs from the related loan's principal amount at the date of purchase. This difference shall be recognized as an adjustment of yield over the life of the loan. All other costs incurred in connection with acquiring purchased loans or committing to purchase loans shall be charged to expense as incurred.

Other

17. Deferred net fees or costs shall not be amortized during periods in which interest income on a loan is not being recognized because of concerns about the realization of loan principal or interest.

Application of the Interest Method and Other Amortization Matters

18. Net fees or costs that are required to be recognized as yield adjustments over the life of the related loan(s) shall be recognized by the interest method except as set forth in paragraph 20. The objective of the interest method is to arrive at periodic interest income (including recognition of fees and costs) at a constant effective yield on the net investment in the receivable (that is, the principal amount of the receivable adjusted by unamortized fees or costs and purchase premium or discount). The difference between the periodic interest income so determined and the stated interest on the outstanding principal amount of the receivable is the amount of periodic amortization. Under the provisions of this statement, the interest method shall be applied as follows when the stated interest rate is not constant throughout the term of the loan:
a. If the loan's stated interest rate increases during the term of the loan (so that interest accrued under the interest method in early periods would exceed interest at the stated rate), interest income shall not be recognized to the extent that the net investment in the loan would increase to an amount greater than the amount at which the borrower could settle the obligation. Prepayment penalties shall be considered in determining the amount at which the borrower could settle the obligation only to the extent that such penalties are imposed throughout the loan term. (Refer to Appendix B.)

b. If the loan's stated interest rate decreases during the term of the loan, the stated periodic interest received early in the term of the loan would exceed the periodic interest income that is calculated under the interest method. In that circumstance, the excess shall be deferred and recognized in those future periods when the constant effective yield under the interest method exceeds the stated interest rate. (Refer to Appendix B.)

c. If the loan's stated interest rate varies based on future changes in an independent factor, such as an index or rate (for example, the prime rate, the London Interbank Offered Rate (LIBOR), or the U.S. Treasury bill weekly average rate), the calculation of the constant effective yield necessary to recognize fees and costs shall be based either on the factor (the index or rate) that is in effect at the inception of the loan or on the factor as it changes over the life of the loan. 7 (Refer to Appendix B.)

---

6 The "interest" method is also described in paragraph 16 of APB Opinion No. 12, Omnibus Opinion--1967, in the first sentence of paragraph 15 of APB Opinion No. 21, Interest on Receivables and Payables, and in paragraphs 235-239 of FASB Concepts Statement No. 6, Elements of Financial Statements.

7 A variable rate loan whose initial rate differs from the rate its base factor would produce is also subject to the provisions of paragraphs 18(a) and (b).

---

19. Except as stated in the following sentence, the calculation of the constant effective yield necessary to apply the interest method shall use the payment terms required by the loan contract, and prepayments of principal shall not be anticipated to shorten the loan term. If the enterprise holds a large number of similar loans for which prepayments are probable and the timing and amount of prepayments can be reasonably estimated, the enterprise may consider estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. If the enterprise anticipates prepayments in applying the interest method and a difference arises between the prepayments anticipated and actual prepayments received, the enterprise shall recalculate the effective yield to reflect actual payments to date and anticipated future payments. The net investment in the loans shall be adjusted to the amount that would have existed had the new effective yield been applied since the acquisition of the loans. The investment in the loans shall be adjusted to the new balance with a corresponding charge or credit to interest income. Enterprises that anticipate prepayments shall disclose that policy and the significant assumptions underlying the prepayment estimates. The practice of recognizing net fees over the estimated average life of a group of loans shall no longer be acceptable. (Refer to Appendix B.)

20. Certain loan agreements provide no scheduled payment terms (demand loans); others provide the borrower with the option to make multiple borrowings up to a specified maximum amount, to repay portions of previous borrowings, and then reborrow under the same contract (revolving lines of credit).

a. For a loan that is payable at the lender's demand, any net fees or costs may be recognized as an adjustment of yield on a straight-line basis over a period that is consistent with (1) the understanding between the borrower and lender or (2) if no understanding exists, the lender's
estimate of the period of time over which the loan will remain outstanding; any unamortized amount shall be recognized when the loan is paid in full.

b. For revolving lines of credit (or similar loan arrangements), the net fees or costs shall be recognized in income on a straight-line basis over the period the revolving line of credit is active, assuming that borrowings are outstanding for the maximum term provided in the loan contract.

If the borrower pays all borrowings and cannot re borrow under the contract, any unamortized net fees or costs shall be recognized in income upon payment. The interest method shall be applied to recognize net unamortized fees or costs when the loan agreement provides a schedule for payment and no additional borrowings are provided for under the agreement.\textsuperscript{8}

\textsuperscript{8} For example, if the loan agreement provides the borrower with the option to convert a one-year revolving line of credit to a five-year term loan, during the term of the revolving line of credit the lender would recognize the net fees or costs as income on a straight-line basis using the combined life of the revolving line of credit and term loan. If the borrower elects to convert the line of credit to a term loan, the lender would recognize the unamortized net fees or costs as an adjustment of yield using the interest method. If the revolving line of credit expires and borrowings are extinguished, the unamortized net fees or costs would be recognized in income upon payment.

30. FAS 125 provides the following guidance:

28. To be substantially the same,\textsuperscript{9} the asset that was transferred and the asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same)

b. Identical form and type so as to provide the same risks and rights

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities have similar remaining weighted-average maturities that result in approximately the same market yield)

d. Identical contractual interest rates

e. Similar assets as collateral

f. The same aggregate unpaid principal amount or principal amounts within accepted "good delivery" standards for the type of security involved.

\textsuperscript{9}In this Statement, the term substantially the same is used consistently with the usage of that term in the AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position.

31. AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position (SOP 90-3) provides the following guidance:

.13 To minimize diversity in practice, the AICPA Banking Committee, Savings and Loan Associations Committee, and Stockbrokerage and Investment Banking Committee believe the definition of substantially the same should be narrow. Therefore, the committees have concluded that for debt instruments, including mortgage-backed securities, to be substantially the same, all the following criteria must be met:
The debt instruments must have the same primary obligor, except for debt instruments guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and terms of the guarantee must be the same.¹

¹ The exchange of pools of single-family loans would not meet this criterion because the mortgages comprising the pool do not have the same primary obligor, and would therefore not be considered substantially the same.

The debt instruments must be identical in form and type so as to give the same risks and rights to the holder.²

² For example, the following exchanges would not meet this criterion: GNMA I securities for GNMA II securities; loans to foreign debtors that are otherwise the same except for different U.S. foreign tax credit benefits (because such differences in the tax receipts associated with the loans result in instruments that vary "in form and type"); commercial paper for redeemable preferred stock.

The debt instruments must bear the identical contractual interest rate.

The debt instruments must have the same maturity except for mortgage-backed pass-through and pay-through securities for which the mortgages collateralizing the securities must have similar remaining weighted average maturities (WAMs) that result in approximately the same market yield.³

³ For example, the exchange of a "fast-pay" GNMA certificate (that is, a certificate with underlying mortgage loans that have a high prepayment record) for a "slow-pay" GNMA certificate would not meet this criterion because differences in the expected remaining lives of the certificates result in different market yields.

Mortgage-backed pass-through and pay through securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages.

The debt instruments must have the same aggregate unpaid principal amounts, except for mortgage-backed pass-through and pay-through securities, where the aggregate principal amounts of the mortgage-backed securities given up and the mortgage-backed securities reacquired must be within the accepted "good delivery" standard for the type of mortgage-backed security involved.⁴

⁴ Participants in the mortgage-backed securities market have established parameters for what is considered acceptable delivery. These specific standards are defined by the Public Securities Association (PSA) and can be found in Uniform Practices for the Clearance and Settlement of Mortgage-Backed Securities and Other Related Securities, which is published by PSA.

Statutory Issue Paper No. 27

Title:
Disclosure of Information about Financial Instruments with Concentration of Credit Risk

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. In the normal course of business, insurance enterprises enter into transactions involving investment contractual relationships which include but are not limited to time deposits, short-term investments, bonds, preferred stocks, mortgage loans, deposit accounts and notes payable, collectively called financial instruments. Many of these transactions can result in concentrations of credit risks in that significant fluctuations in one area of a financial market could result in material adverse financial consequences to an insurance enterprise. With certain exceptions, current statutory guidance does not require financial statement disclosure of financial instruments with concentration of credit risk. GAAP has specific disclosure requirements for financial instruments which have concentration of credit risk. This issue paper establishes statutory accounting principles for disclosure of financial instruments with concentration of credit risk that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

2. Except as noted in paragraph 14 of FASB Statement No. 105, Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk (FAS 105), (included in the Relevant GAAP Guidance section of this Issue Paper), a reporting entity shall disclose all significant concentrations of credit risk arising from all financial instruments whether from an individual or group. Group concentrations of credit risk exist if a number of individuals or groups are engaged in similar activities and have similar economic characteristics that would cause their ability to meet contractual obligations to be similarly affected by changes in economic or other conditions. The following shall be disclosed in the notes to the financial statements about each significant concentration:

   a. Information about the (shared) activity, region, or economic characteristic that identifies the concentration

   b. The amount of the accounting loss due to credit risk the entity would incur if parties to the financial instruments that make up the concentration failed completely to perform according to the terms of the contracts and the collateral or other security, if any, for the amount due proved to be of no value to the entity

   c. The entity’s policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity’s access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.
DISCUSSION:

3. The conclusion above adopts the provisions of FAS 105 as it relates to financial instruments with concentrations of credit risk (paragraphs 14 and 20). Disclosure of information about financial instruments with off-balance-sheet risk relating to derivative financial instruments is covered in Issue Paper No. 85 - Derivative Instruments (Issue Paper No. 85) which contains all of the disclosure requirements for derivatives.

4. The Statement of Concepts states that "Because these basic financial statements cannot be expected to provide all of the information necessary to evaluate an entity's short-term and long-term stability, management must supplement the financial statements with sufficient disclosures (e.g., notes to the financial statements, management's discussion and analysis, and supplementary schedules and exhibits) to assist financial statement users in evaluating the information provided." Disclosures of financial instruments with concentration of credit risk is consistent with that objective.

5. The following represent examples where disclosure of concentration of credit risk may be warranted. These examples are not intended to be all inclusive.

   a. Entities which invest in mortgage loans wherein a substantial portion of the loans are in farms and the debtors' ability to honor the contract is dependent upon the agribusiness economic sector.

   b. Entities investing in mortgage loans wherein a substantial portion of the loans are located in one geographic region and the debtors' ability to honor the contract is dependent upon the economic stability of that region.

Drafting Notes/Comments

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

6. There is no statutory guidance on disclosures about concentrations of credit risk. However, the NAIC Annual Statement Instructions for Life and Accident and Health and for Property and Casualty Insurance Companies require information about the geographic location of certain investments which provides some information about concentrations of credit risk (e.g. Schedule B on mortgage).

Generally Accepted Accounting Principles

7. FAS 105 discusses disclosure of concentration of credit risk as follows:

   6. A financial instrument is cash, evidence of an ownership interest in an entity, or a contract that both:

      a. Imposes on one entity a contractual obligation\(^1\) (1) to deliver cash or another financial instrument\(^2\) to a second entity or (2) to exchange financial instruments on potentially unfavorable terms with the second entity

\(^1\) Contractual obligations encompass both those that are conditioned on
the occurrence of a specified event and those that are not. All contractual obligations that are financial instruments meet the definition of liability set forth in FASB Concepts Statement No. 6, Elements of Financial
Statements, although some may not be recognized as liabilities in financial statements — may be “off-balance-sheet” — because they fail to meet some other criterion for recognition. For some financial instruments, the obligation is owed to or by a group of entities rather than a single entity.

2 The use of the term financial instrument in this definition is recursive (because the term financial instrument is included in it), but it is not circular. It requires a chain of contractual obligations that ends with the delivery of cash or an ownership interest in an entity. Any number of obligations to deliver financial instruments can be links in a chain that qualifies a particular contract as a financial instrument.

b. Conveys to that second entity a contractual right3 (1) to receive cash or another financial instrument from the first entity or (2) to exchange other financial instruments on potentially favorable terms with the first entity.

3 Contractual rights encompass both those that are conditioned on the occurrence of a specified event and those that are not. All contractual rights that are financial instruments meet the definition of asset set forth in Concepts Statement 6, although some may not be recognized as assets in financial statements — may be “off-balance-sheet” — because they fail to meet some other criterion for recognition. For some financial instruments, the obligation is held by or due from a group of entities rather than a single entity.

7. The risk of accounting loss4 from a financial instrument includes (a) the possibility that a loss may occur from the failure of another party to perform according to the terms of a contract (credit risk), (b) the possibility that future changes in market prices may make a financial instrument less valuable or more onerous (market risk),5 and (c) the risk of theft or physical loss. This statement addresses credit and market risk only.

4 Accounting loss refers to the loss that may have to be recognized due to credit and market risk as a direct result of the rights and obligations of a financial instrument.

5 A change in market price may occur (for example, for interest-bearing financial instruments) because of changes in general interest rates (interest rate risk), changes in the relationship between general and specific market interest rates (an aspect of credit risk), or changes in the rates of exchange between currencies (foreign exchange risk).

8. Some financial instruments are recognized as assets, and the amount recognized reflects the risk of accounting loss to the entity. A receivable that is recognized and measured at the present value of future cash inflows, discounted at the historical interest rate (often termed amortized cost), is an example: the accounting loss that might arise from that account receivable cannot exceed the amount recognized as an asset in the statement of financial position.6

6 It is possible that an economic loss could exceed that amount if, for example, the current market value of an asset was higher than the amount recognized in the statement of financial position. This Statement, however, does not address that economic loss.

12. This Statement requires disclosure of information about financial instruments that have off-balance-sheet risk and about financial instruments with concentrations of credit risk except as specifically modified by paragraphs 14 and 15. It does not change any requirements for recognition, measurement, or classification of financial instruments in financial statements.
14. The requirements of paragraphs 17, 18, and 20 do not apply to the following financial instruments, whether written or held:

a. Insurance contracts, other than financial guarantees and investment contracts, as discussed in FASB Statements No. 60, Accounting and Reporting by Insurance Enterprises, and No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments

b. Unconditional purchase obligations subject to the disclosure requirements of FASB Statement No. 47, Disclosure of Long-Term Obligations.  

9 Unconditional purchase obligations not subject to the requirements of Statement 47 are included in the scope of this Statement. That is, unconditional purchase obligations that require the purchaser to make payment without regard to delivery of the goods or receipt of benefit of the services specified by the contract and are not within the scope of Statement 47 (because they were not negotiated as part of a financing arrangement, for example) are included in the scope of this Statement. 

9

c. Employers' and plans' obligations for pension benefits, postretirement health care and life insurance benefits, employee stock option and stock purchase plans, and other forms of deferred compensation arrangements, as defined in FASB Statements No. 35, Accounting and Reporting by Defined Benefit Pension Plans, No. 87, Employers' Accounting for Pensions, No. 81, Disclosure of Postretirement Health Care and Life Insurance Benefits, No.43, Accounting for Compensated Absences, as well as APB Opinions No. 25, Accounting for Stock Issued to Employees, and No. 12, Omnibus Opinion--1967

d. Financial instruments of a pension plan, including plan assets, when subject to the accounting and reporting requirements of Statement 87. 10

10 Financial instruments of a pension plan, other than the obligations for pension benefits, when subject to the accounting and reporting requirements of Statement 35 are included in the scope of this Statement. 

e. Substantively extinguished debt subject to the disclosure requirements of FASB Statement No. 76, Extinguishment of Debt, and any assets held in trust in connection with an in-substance defeasance of that debt.

16. Generally accepted accounting principles contain specific requirements to disclose information about the financial instruments noted in paragraphs 14 and 15, and this Statement does not change those requirements. For all other financial instruments, the requirements in this Statement are in addition to other disclosure requirements prescribed by generally accepted accounting principles.

Disclosure of Concentrations of Credit Risk of All Financial Instruments

20. Except as noted in paragraph 14, an entity shall disclose all significant concentrations of credit risk arising from all financial instruments, whether from an individual counterparty or groups of counterparties. Group concentrations of credit risk exist if a number of counterparties are engaged in similar activities and have similar economic characteristics that would cause their ability to meet contractual obligations to be similarly affected by changes in economic or other conditions. The following shall be disclosed about each significant concentration:
Disclosure of Information about Financial Instruments with Concentration of Credit Risk

a. Information about the (shared) activity, region, or economic characteristic that identifies the concentration

b. The amount of the accounting loss due to credit risk the entity would incur if parties to the financial instruments that make up the concentration failed completely to perform according to the terms of the contracts and the collateral or other security, if any, for the amount due proved to be of no value to the entity

c. The entity's policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity's access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments.

8. Paragraphs 9, 10, 11, 13, 15, 17, 18, and 19 of FAS 105 have been deleted from this section as they deal with Off-Balance sheet risk which will be addressed in Issue Paper No. 85.

Statutory Issue Paper No. 28

Title:
Short-term Investments

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Short-term investments are investments which generally are in the form of bonds, commercial paper, money market instruments, repurchase agreements, and collateral and mortgage loans, whose maturity dates (or repurchase dates) at the time of acquisition were one year or less. Current statutory accounting guidance requires short-term investments to be carried in the same manner as similar long-term investments. Any premium or discount is amortized on a straight-line basis through the maturity date of the investment. This is different from GAAP which does not have the classification of short-term investments.

2. The purpose of this issue paper is to define short-term investments and to establish statutory accounting principles and related reporting that is consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. All investments with remaining maturities (or repurchase dates under repurchase agreements) of one year or less at the time of acquisition (excluding those investments classified as cash equivalents as defined in Issue Paper No. 2–Definition of Cash (Issue Paper No. 2)) shall be considered short-term investments. Short-term investments include, but are not limited to, bonds, commercial paper, money market instruments, repurchase agreements, and collateral and mortgage loans which meet the above criteria. Short-term investments shall not include certificates of deposit with contractual maturities of one year or less at the time of acquisition. In accordance with Issue Paper No. 2, these investments shall be classified as cash.

4. All short-term investments shall be accounted for in the same manner as similar long-term investments. Investments in money market funds shall be reported in accordance with the guidance in the Procedures for Valuing Common Stocks and Stock Warrants section of the Purposes and Procedures Manual of the Securities Valuation Office of the NAIC.

5. The following disclosures shall be made for short-term investments in the notes to the financial statements:

   a. Fair values in accordance with Issue Paper No. 33 - Disclosures about Fair Value of Financial Instruments;

   b. Concentrations of credit risk in accordance with Issue Paper No. 27 - Disclosure of Information about Financial Instruments with Concentration of Credit Risk;

   c. Basis at which the short-term investments are stated.
DISCUSSION:

6. The conclusion above rejects FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities (FAS 115), for those securities which have maturities of one year or less from the date of acquisition. The conclusion above is consistent with existing statutory guidance.

7. The above conclusion requires separate classification of those investments held by a reporting entity which have maturity dates of one year or less at the time of their acquisition from those with maturity dates of over one year at acquisition. The Statement of Concepts states that "the cornerstone of solvency measurement is financial reporting. Therefore, the regulator's ability to effectively determine relative financial condition using financial statements is of paramount importance to the protection of policyholders."

8. GAAP classifies securities with original maturities of ninety days or less as cash equivalents and those over ninety days in one of the following categories in accordance with FAS 115: 1) trading; 2) available-for-sale; 3) held-to-maturity. Issue Paper No. 2 defines cash as "a medium of exchange that a bank will accept for deposit and allow an immediate credit to the depositor's account." Moreover, statutory accounting guidance does not recognize the GAAP classification of investments contained in FAS 115.

9. Negotiable certificates of deposit with a contractual maturity of one year or less at acquisition will no longer be classified as short-term investments. This change was made to address inconsistencies in the guidance between the Accounting Practices and Procedures Manuals for Property and Casualty Insurance Companies and Life and Accident and Health Insurance Companies (P&C and Life/A&H Accounting Practices and Procedures Manuals) and The Purposes and Procedures of the Securities Valuation Office of the National Association of Insurance Commissioners (SVO Purposes and Procedures). The P&C and Life/A&H Accounting Practices and Procedures Manuals require all nonnegotiable certificates of deposit to be classified as cash and negotiable certificates of deposit to be classified as short-term investments or bonds depending on the length to maturity at acquisition. The SVO Purposes and Procedures requires both negotiable and nonnegotiable certificates of deposit to be submitted to the SVO and valued under the general provisions for valuing bonds.

Drafting Notes/Comments
- Bonds and other long-term investments are addressed in separate issue papers.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
10. Statutory accounting guidance is contained in the P&C and Life/A&H Accounting Practices and Procedures Manuals, Chapter 5, Cash and Short-term Investments. Chapter 5 states:

Short-term Investments

Short-term investments are generally in the form of bonds, commercial paper, money market instruments, repurchase agreements, or collateral and mortgage loans whose maturities (or repurchase dates under repurchase agreements) at time of acquisition were one year or less.

The accounting for short-term investments is the same as for similar long-term investments except that the method of accrual and amortization is always straight line and the assets are always valued at book value or market value.
11. Guidance for investments in money market funds is contained in the SVO Purposes and Procedures. Section 5(A) - Procedures for Valuing Common Stocks and Stock Warrants, states:

Shares of mutual funds, except for certain money market funds as defined by 17 CFR 270.2a-7 under the Investment Company Act of 1940 (15 U.S.C. 80a-1 et seq.) and further defined in section 5(A)(a)(i) and 5(A)(a)(ii), regardless of the types or mix of securities owned (bonds, stock, money market instruments, or other type of investments) by the fund, are considered to be common shares which should be reported on Schedule D-Part 2-Section 2.

(i) A money market fund shall not require a reserve if the fund meets all of the following conditions:

1. The fund shall maintain a money market fund rating in the highest category from an SVO recognized rating agency; and

2. The fund shall maintain a constant net asset value per share at all times; and

3. The Fund shall allow a maximum of seven day redemption of proceeds; and

4. (a) The fund shall invest 100% of its total assets in U.S. treasury bills, notes, and bonds and collateralized repurchase agreements comprised of those obligations at all times (see Section 5(F) for a list of qualifying Funds), or

   (b) The fund shall invest 100% of its total assets in certain securities listed in Section 6(B)(g)(i) and collateralized repurchase agreements comprised of those obligations at all times (see Section 5(G) for a list of qualifying Funds).

(ii) A money market fund shall establish a reserve using the bond class one reserve factor if the fund meets all of the following conditions:

1. The fund shall invest at least 95% of its total assets in exempt securities listed in Section 6A(a), short-term debt instruments with a maturity of 397 days or less, class one bonds, and collateralized repurchase agreements comprised of those securities at all times (see Section 5(H) for a list of qualifying Funds); and

2. The fund shall maintain a money market fund rating in the highest category by an SVO approved rating agency: and

3. The fund shall maintain a constant net asset value per share at all times: and

4. The fund shall allow a maximum of seven day redemption of proceeds:

(iii) A money market fund which qualifies for reserve exemption pursuant to Section 5(A)(a)(i) or inclusion in the bond class one reserve category pursuant to Section 5(A)(a)(ii) shall be reported on Schedule DA-Part 1.

(iv) In order to qualify for a reserve exemption pursuant to Section 5(A)(a)(i) or inclusion in the bond class one reserve category pursuant to Section 5(A)(a)(ii), a money market fund shall submit documentation on forms provided by the SVO staff. The forms shall include sufficient information to demonstrate compliance with the above requirements.

(v) In order to maintain the qualifications for exemption or inclusion in the bond class one reserve category, the fund shall report annually, current fund information to the SVO staff by November 15. In addition, the fund shall report to the SVO any change in investment policy which requires notice to shareholders.
12. Section 2(C)(7) of the SVO Purposes and Procedures indicates the following requirements for certificates of deposit: “Certificates of Deposit (negotiable and non-negotiable) will be considered under the general provisions of Section 2(B).”

_Generally Accepted Accounting Principles_

13. GAAP does not make the distinction between short-term and long-term investments. All investments in equity securities that have readily determinable fair values and all investments in debt securities follow FAS 115, which states:

   a. Debt and equity securities that the enterprise has the positive intent and ability to hold to maturity are classified as held-to-maturity securities and reported at amortized cost.

   b. Debt and equity securities that are bought and held principally for the purpose of selling them in the near term are classified as trading securities and reported at fair value, with unrealized gains and losses included in earnings.

   c. Debt and equity securities not classified as either held-to-maturity securities or trading securities are classified as available-for-sale securities and reported at fair value, with unrealized gains and losses excluded from earnings and reported in a separate component of shareholders’ equity.

Prepaid Expenses

Statutory Issue Paper No. 29

Title:
Prepaid Expenses (excluding Deferred Policy Acquisition Costs and other underwriting expenses, income taxes and Guaranty Fund Assessments)

Status:
Finalized March 16, 1998

Type of Issue:
Common area

SUMMARY OF ISSUE:

1. A prepaid expense is an amount which has been paid in advance of receiving future economic benefits anticipated by the payment. Current statutory accounting guidance requires prepaid expenses to be recorded as nonadmitted assets. This conflicts with the GAAP treatment which states that prepaid expenses are to be recorded as assets and expensed over the period that the benefits are received from the payment.

2. The purpose of this paper is to establish statutory accounting principles for the accounting for prepaid expenses that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION:

3. Prepaid expenses generally meet the definition of an asset in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets (Issue Paper No. 4). Such expenditures also meet the criteria defining nonadmitted assets as specified in Issue Paper No. 4 (i.e. the assets are not readily available to satisfy policyholder obligations). Prepaid expenses shall be reported as nonadmitted assets and charged against unassigned funds (surplus). They shall be amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity’s capitalization policy, immaterial prepaid expenses may be expensed when purchased.

DISCUSSION:

4. The conclusion above is consistent with the definition of nonadmitted assets as noted in Issue Paper No. 4, which defines an asset as "probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events." Issue Paper No. 4 further states that an asset that is not readily available to satisfy policyholder obligations shall be reported as a nonadmitted asset. Prepaid expenses meet the definition of assets as they represent future economic benefits obtained as a result of past transactions. Additionally, prepaid expenses meet the definition of nonadmitted assets because they are not readily available to satisfy policyholder obligations.
Drafting Notes/Comments
- Guaranty fund assessments are addressed in Issue Paper No. 35 – Accounting for Guaranty Fund and Other Assessments.
- Accounting for income taxes is addressed in Issue Paper No. 83 – Accounting for Income Taxes.
- Deferred policy acquisition costs and other underwriting expenses are addressed in Issue Paper No. 71 – Policy Acquisition Costs and Commissions.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting

6. Many states also include prepaid expenses as nonadmitted assets. An example is the Regulations of the Alabama Insurance Department, Regulation No. 18, *Admissibility of Assets*, which states "Admitted assets, for example, will not include such items as furniture and fixtures, automobiles, supplies, prepaid expenses...".

7. Some states nonadmit most prepaid expenses but allow particular prepaid expenses to be recorded as admitted assets. An example is the Virginia Insurance Laws, Title 38.2 - Insurance, Chapter 13, *Reports, Reserves and Examination, Insurance Holding Companies*, Article 2. Valuation and Admissibility of Assets which nonadmits "prepaid and deferred expenses except prepaid property taxes."

Generally Accepted Accounting Principles

4. For accounting purposes, the term current assets is used to designate cash and other assets or resources commonly identified as those which are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business. Thus the term comprehends in general such resources as...(g) prepaid expenses such as insurance, interest, rents, taxes, unused royalties, current paid advertising service not yet received, and operating supplies.

Title:
Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)

Status:
Finalized March 16, 1998

Type of Issue:
Common Area

SUMMARY OF ISSUE:

1. Current statutory guidance pertaining to the valuation of and accounting for common stock is contained in the Accounting Practices and Procedures Manuals for Life and Accident and Health and for Property and Casualty Insurance Companies. That guidance also established the NAIC's Securities Valuation Office (SVO) as the primary authority for the valuation of common stocks. The purpose of this issue paper is to establish statutory accounting principles for common stocks, including those loaned under a securities lending agreement, which are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

2. Accounting for investments in common stock of subsidiaries, controlled or affiliated entities (investments in affiliates) will be addressed in a separate issue paper.

SUMMARY CONCLUSION:

3. For purposes of statutory accounting, common stocks (excluding investments in affiliates) are securities which represent a residual ownership in a corporation and shall include:

   a. Publicly traded common stocks.

   b. Master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York, American, or NASDAQ exchanges.

   c. Publicly traded common stock warrants.

   d. Shares of mutual funds, except for certain money market funds and Class 1 Bond Funds as designated in the Purposes and Procedures of the Securities Valuation Office of the NAIC, regardless of the types or mix securities owned by the fund (e.g., bonds, stock, money market instruments, or other type of investments).

   e. Common stocks that are not publicly traded.

   f. Common stocks that are restricted as to transfer of ownership. Restricted stock shall be defined as a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.
4. Common stocks meet the definition of assets as defined in Issue Paper No. 4 - Definition of Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this paper.

5. Common stock acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

6. Dividends on common stock shall be recorded as investment income on the ex-dividend date with a corresponding receivable to be extinguished upon receipt of cash (i.e., dividend income shall be recorded on stocks declared to be ex-dividends on or prior to the statement date). For reporting entities required to maintain an Asset Valuation Reserve (AVR), the accounting for realized capital gains and losses on sales of common stock shall be in accordance with Issue Paper No. 7 - Asset Valuation Reserve and Interest Maintenance Reserve (Issue Paper No. 7). For reporting entities not required to maintain an AVR, realized gains and losses on sales of common stock shall be reported as realized gains/losses in the statement of operations.

7. At acquisition, common stocks shall be reported at their cost, including brokerage and other related fees. At each reporting date, investments in common stocks shall be valued and reported in accordance with the Purposes and Procedures of the Securities Valuation Office of the National Association of Insurance Commissioners. In those instances where fair market value is not available from the SVO, it is the responsibility of management to determine market value based on analytical or pricing mechanisms. For reporting entities required to maintain an AVR, the accounting for unrealized capital gains and losses shall be in accordance with Issue Paper No. 7. For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus.

8. For any decline in the fair value of a common stock which is determined to be other than temporary, the common stock shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. For those reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with Issue Paper No. 7. Subsequent fluctuations in market value shall be recorded as unrealized gains or losses. Future declines in market value which are determined to be other than temporary, shall be recorded as realized losses. A decline in fair value which is other than temporary includes situations where a reporting entity has made a decision to sell a security at an amount below its carrying value (association value). This is consistent with Issue Paper No. 5 - Definition of Liabilities, Loss Contingencies and Impairments of Assets.

9. An investor can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Common stock acquired under a subscription represents a conditional transaction in a security authorized for issuance but not yet actually issued. Such transactions are settled if and when the actual security is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to be settled. Common stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the security and the security is recorded in the name of the reporting entity or its nominee (i.e., the accounting for such common stock acquisitions shall be on the settlement date).

**Loaned Stock**

10. When stocks are loaned, they remain assets of the reporting entity and are not removed from the accounting records as the reporting entity remains the owner of the stocks. When collateral is provided for the general use of the reporting entity, the asset is recorded and the admissibility of the asset is determined as if the reporting entity owned the collateral asset. A liability for the return of that collateral...
Investments in Common Stock, (excluding investments in common stock of subsidiary, controlled, or affiliated entities)

must be established. When collateral not available for the general use of the reporting entity is provided, it should not be recognized as an asset of the reporting entity. When non-cash collateral is provided, the current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned stocks/securities.

Wash Sales

11. When common stock is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered wash sales, and shall be accounted for as sales and disclosed as required by paragraph 14. Unless there is a concurrent contract to repurchase or redeem the transferred stock from the transferee, the transferor does not maintain effective control over the stock.

12. For the securities to be substantially the same, the criteria set forth in paragraph 28 of FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (FAS 125) must be met.

Stock Splits, Stock Dividends, Payment in Kind Dividends, and Stock Exchanges

13. Stock splits, stock dividends, payment in kind dividends and stock exchanges shall be accounted for in accordance with Issue Paper No. 73 - Nonmonetary Transactions.

Disclosures

14. The following disclosures shall be made for common stocks in the notes to the financial statements.

a. Basis at which the common stocks are stated.

b. If the reporting entity has entered into securities lending transactions, its policy for requiring collateral, a description of any loaned common stocks, including the amount, description of the collateral and whether or not the collateral is restricted.

c. A description, as well as the amount, of common stock that is restricted and the nature of the restriction.

d. Reporting entities shall disclose the following information for common stock wash sales as defined in paragraph 11:

1. A description of the reporting entities objectives regarding these transactions;
2. An aggregation of transactions;
3. The number of transactions involved during the reporting period;
4. The book value of securities sold;
5. The cost of securities repurchased;
6. The realized gains/losses associated with the securities involved.

DISCUSSION:

15. The statutory accounting principles described in paragraphs 3 through 7 and in paragraph 10 above are consistent with current statutory accounting guidance for common stocks. This issue paper rejects the accounting principles set forth in FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities (FAS 115). The statutory accounting principles described above add additional conservatism to existing statutory guidance by adopting the concept of other than
temporary declines and requiring those be charged to realized losses (paragraph 8) and requiring that certain common stock transactions not be recorded until settlement date (paragraph 9).

16. This issue paper adopts paragraphs 9 through 12, 15, 17, 23 through 31 and 61 through 65 of FASB Statement No. 125, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (FAS 125) as they relate to common stock. The guidance on loaned securities in this issue paper is drafted under the general rule that securities lending transactions do not meet the criteria for surrender of control necessary to classify the transaction as a sale. If the criteria in paragraph 9 of FAS 125 regarding surrender of control are met, the transaction shall be accounted for by the transferor as a sale of the "loaned" securities.

17. Paragraph 14 of FAS 125 is rejected as it relates to the classifications of securities under FAS 115. FAS 115 was rejected in Issue Paper No. 26 - Bonds, excluding Loan-backed and Structured Securities.

18. The statutory accounting principles outlined in the conclusion above are consistent with the concept of recognition in the Statement of Concepts. Pertinent excerpts follow:

Recognition

The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability becomes questionable.

Drafting Notes/Comments
- Accounting for common stock holdings of subsidiary, controlled and affiliated entities is addressed in Issue Paper No. 46 - Accounting for Investments in Subsidiary, Controlled and Affiliated Entities.
- Investment income due and accrued is addressed in Issue Paper No. 34 - Investment Income Due and Accrued.
- Accounting for the Asset Valuation Reserve (AVR) equity component required for common stock holdings will be addressed in Issue Paper No. 7 - Asset Valuation Reserve and Interest Maintenance Reserve.
- Securities not yet valued by the SVO will follow SVO procedures for valuing such securities as being drafted by the SVO as directed by the Invested Asset Working Group of the Valuation of Securities (EX4) Task Force.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE:

Statutory Accounting
19. The Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies provides guidance with respect to common stock (similar guidance is also in the Accounting Practices and Procedures Manual for Property and Casualty Insurance Companies). Pertinent excerpts are as follows:

Shares of capital stock represent units of ownership in a corporation, including common and preferred stock, mutual fund shares, transferable savings and loan association shares, warrants, and options to purchase stock. A return on stock held for investment is generally in the form of cash dividends which are paid to the owner. Occasionally, dividends are paid in the form of
additional shares of stock. Liquidation of stock investments may give rise to capital gains or losses. (Investment in stock of parents, subsidiaries or affiliates is discussed in Chapter 6.)

Common stockholders are the residual owners of the corporation and assume the ultimate risk associated with ownership up to the limit of their investment. They are usually entitled to voting powers of ownership. At liquidation, their claim to assets is after those of creditors and preferred stockholders. Common stockholders may liquidate their ownership rights in a corporation by selling their shares in the secondary market.

Valuation

Common and preferred stocks are generally required to be reported at the value published in the Valuations of Securities manual published by the NAIC's Valuation of Securities Task Force at the end of each year. This value is the subcommittee's determination of "market" for each listed stock.

The valuation of stock purchase warrants, stock purchase options that may be exercised on December 31 of the year for which the annual statement is being prepared, loaned securities, and investments in subsidiaries shall be in accordance with the practices and procedures prescribed by the NAIC and the state of domicile.

Securities not listed in the manual, securities listed with no value because insufficient information for valuation was submitted to the Valuation of Securities Task Force, and restricted stock require the determination of an acceptable value. Insurance companies are required to submit sufficient information on these securities to the NAIC Securities Valuation Office to permit them to determine market value.

Dividends

Dividends are usually recorded in the general ledger on a cash basis. Dividends receivable on qualified shares of stock are generally permitted as admitted assets to the extent that the dividend has been excluded from the determination of the market price of the holding (i.e., on stock selling ex-dividend). Dividends receivable are included in "Investment Income Due and Accrued" in the annual statement. The asset is developed by a determination of the dividend status of each stock investment at the balance sheet date. Thus, dividend income on stock for any period consists of dividends collected during the year and the change in the declared but unpaid dividends between the beginning and end of the period.

The Valuations of Securities manual has a complete listing of all stocks that are traded "ex-dividend" at the end of the year. An ex-dividend stock is one in which the issuing company has closed its stock ledger on a certain date and has declared a dividend payable to the stockholder of record, even though the stock may have been sold after the record date but prior to the payment date. The association value of ex-dividend stock includes no value for the dividend since the unpaid dividend does not transfer with ownership of the stock. The listing of ex-dividend stock contains the declared dividend rate for calculating the declared but unpaid dividends that are allowable for each stock owned by the company on the dividend record date.

Loaned Stock

Where the law or regulation of the insurer's state of domicile does not prohibit such activity, stock may be loaned to authorized securities broker/dealer or to authorized financial institutions.

Securities lending is conducted through open-ended agreements, which may be terminated on short notice by the lender or borrower. Securities loans are collateralized by cash and/or cash equivalents, and securities issued by the U.S. Government or its agencies. Securities lending
transactions may be negotiated directly between an insurer and a borrower, or indirectly through an insurer's custodian/agent and a borrower.

When stocks are loaned, they remain assets of the insurance company and are not removed from the accounting records as the insurance company remains the owner of the stocks. When cash collateral is provided and it is deposited for the general use of the company, it becomes an asset of the company, and a liability for the return of that collateral must be established.

When non-cash collateral not available for the general use of the company is provided, it should not be recognized as an asset of the company. If balance sheet accounts are used for non-cash collateral control purposes, a contra account should be used to neutralize or zero out the balance sheet account so that no net asset value is reported in the assets of the insurance company. When non-cash collateral is used, current market value of that collateral must be used to determine adequacy of the collateral held relative to the current market value of the loaned stocks/securities.

As stated in the NAIC Valuations of Securities manual, the minimum collateral on securities loaned is 102% of the market value of loaned stocks. The value of collateral will at times exceed or go below 102% of the market value of securities loaned due to daily market fluctuations in both the stocks loaned and collateral. A daily "mark to market" or valuation procedure must be in place to ensure that the market value of the collateral never goes below 100% of the market value of securities loaned and that calls for additional collateral to maintain the 102% minimum which should be made on a timely basis.

If the collateral on stocks is denominated in a different currency than the stocks being loaned, the minimum collateral on these securities loaned is 105% of the market value of loaned stocks as noted in the NAIC Valuations of Securities manual. Again, the same daily valuation procedures noted above must be in place to ensure adequate collateral for stocks loaned.

The valuation of the stocks remain unaffected by the loan as long as the amount of collateral is at least equal to the minimum amounts specified above. Failure to hold sufficient collateral may result in the admitted assets value being decreased by the amount of insufficient collateral.

20. The SVO Purposes and Procedures - Section 5 - Procedures for Valuing Common Stocks and Stock Warrants contains the following guidance:

(A) Common Stocks of Companies Not Classified as Being Subsidiaries, Controlled or Affiliated, Under Section 5(B).

(a) Association values for publicly traded common stocks and warrants, including, where permitted by law or regulation of an insurer's state of domicile, shares against which exchange traded call options are outstanding, and where the requirements of Section 5(C)(1) are met, shall be equal to market value at date of statement, excepting that, where permitted by law or regulation of an insurer's state of domicile, shares loaned to others shall be valued at the market value at date of statement if the Acceptable Collateral, as hereinafter defined, is pledged as security for the loan and except as set forth in the following sentence, the Acceptable Collateral pledged as security is, at the inception of the loan, in an amount equal to 102% of the market value of the loaned shares. In event that foreign shares are the subject of the loan and the denomination of the currency of the Acceptable Collateral is other than the denomination of the currency of the loaned foreign shares, the amount of Acceptable Collateral which shall be pledged shall be an amount equal to 105% of the market value of the loaned shares. A decline in value of the Acceptable Collateral or an increase in the value of the loaned shares during the term of the loan shall not result in disqualification from valuation in accordance with the above if, during the term the loan is outstanding, additional Acceptable Collateral is
posted any time the amount of Acceptable Collateral declines to 100% of the market value of the loaned shares (or 102% of the market value or the loaned shares if Acceptable Collateral in an amount equal to 105% was required to be posted at the inception of the loan) in an amount equal to the difference between the 102% or 105% initially required to be posted and 100% or 102%, respectively. For purpose of this provision, Acceptable Collateral shall mean cash and cash equivalents and shall include securities issued by the U.S. Government or its agencies. Any shortfall in the amount of the actual Acceptable Collateral posted and the required 102% or 105%, as applicable, shall be deducted from the otherwise determined statement value.

Shares of mutual funds, except for certain money market funds as defined by 17 CFR 270.2a-7 under the Investment Company Act of 1940 (15 U.S.C. 80a-1 et seq.) and further defined in section 5(A)(a)(i) and 5(A)(ii), regardless of the types or mix of securities owned (bonds, stock, money market instruments, or other type of investments) by the fund, are considered to be common shares which should be reported on Schedule D-Part 2-Section 2.

(i) A money market fund shall not require a reserve if the fund meets all of the following conditions:

   (1) The fund shall maintain a money market fund rating in the highest category from an SVO recognized rating agency; and

   (2) The fund shall maintain a constant net asset value per share at all times; and

   (3) The fund shall allow a maximum of seven day redemption of proceeds; and

   (4) (a) The fund shall invest 100% of its total assets in U.S. treasury bills, notes, and bonds and collateralized repurchase agreements comprised of those obligations at all times (see Section 5(F) for a list of qualifying Funds), or

       (b) The fund shall invest 100% of its total assets in certain securities listed in Section 6(B)(g)(i) and collateralized repurchase agreements comprised of those obligations at all times (see Section 5(G) for a list of qualifying Funds).

(ii) A money market fund shall establish a reserve using the bond class one reserve factor if the fund meets all of the following conditions:

   (1) The fund shall invest at least 95% of its total assets in exempt securities listed in Section 6A(a), short-term debt instruments with a maturity of 397 days or less, class one bonds, and collateralized repurchase agreements comprised of those securities at all times (see Section 5(H) for a list of qualifying Funds); and

   (2) The fund shall maintain a money market fund rating in the highest category by an SVO approved rating agency; and

   (3) The fund shall maintain a constant net asset value per share at all times; and

   (4) The fund shall allow a maximum of seven day redemption of proceeds:

(iii) A money market fund which qualifies for reserve exemption pursuant to Section 5(A)(a)(i) or inclusion in the bond class one reserve category pursuant to Section 5(A)(a)(ii) shall be reported on Schedule DA-Part 1.
(iv) In order to qualify for a reserve exemption pursuant to Section 5(A)(a)(i) or inclusion in the bond class one reserve category pursuant to Section 5(A)(a)(ii), a money market fund shall submit documentation on forms provided by the SVO staff. The forms shall include sufficient information to demonstrate compliance with the above requirements.

(v) In order to maintain the qualifications for exemption or inclusion in the bond class one reserve category, the fund shall report annually, current fund information to the SVO staff by November 15. In addition, the fund shall report to the SVO any change in investment policy which requires notice to shareholders.

(b) Association Values for common stocks which are not publicly traded, other than those issued by insurance companies (for which see Section (c) hereunder), shall be determined by the SVO Staff.

(c) Association Values for common stocks which are not publicly traded which are issued by insurance companies will be equal to book value, which shall be calculated as follows: by dividing the amount of its capital and surplus as shown in its last annual statement or subsequent report of examination (excluding from surplus, reserves required by statute and any portion of surplus properly allocable to policyholders, rather than stockholders) less the value (par or redemption value, whichever is the greater) of all of its preferred stock, if any, outstanding, by the number of shares of its common stock issued and outstanding.

(d) The foregoing provisions shall in all cases be subject to the procedures prescribed by state insurance department practices or laws concerning the use of acquisition cost or any other basis for the valuation of stocks of insurance companies.

(B) Common Stocks of Subsidiary, Controlled or Affiliated Companies (section not included as not relevant to this issue paper)

(C) Stock Warrants.

(1) Stock Warrants.

All warrants which are exercisable on the date of the Statement shall be valued at Association Value as defined below whether or not physically attached to any other security (See (D), hereunder, for the valuation of warrants exercisable into securities which are restricted as to transferability.)

(a) For publicly traded warrants (other than exchange traded) the Association Value shall be equal to market value.

(b) The Association Value for a warrant having no public market which is currently exercisable into shares of common stock which have no public market shall be the difference resulting from the subtraction from the analytically determined Association Value of the stock of the exercise price for the warrant.

(c) The Association Value for a warrant having no public market which is currently exercisable into shares of common stock which have a counterpart public market but which are themselves restricted shall be the difference resulting from the subtraction from the value of the common shares as determined under the procedures of Section 5(D) below of the exercise price for the warrant.
(d) Warrants having no public market and for which the first exercise date is subsequent to the date of the statement shall have no value for statement purposes.

(D) Common Stocks Having a Public Market Which Are Issued Under an Investment Letter or Are Otherwise Restricted as to Transferability.

Restricted common stocks (which for purposes of this section, are defined as restricted shares of an unaffiliated issuer held for a period of less than three years prior to the date of valuation) shall be valued by insurers in their Annual Statements on a basis which they are prepared to justify to the SVO Staff. (Restrictions shall be considered to have expired for common stocks held at least three years prior to the date of valuation, and the regular valuation basis shall apply.) Such values shall be reviewed by the SVO Staff as to the reasonableness of the valuation basis used. The results of the SVO Staff's review will be made available to insurance departments and upon request to insurers holding said restricted common stocks.

Warrants exercisable into such restricted common stocks will be valued on the same special basis.

All restricted common stocks and warrants exercisable into the same should be appropriately noted in the Annual Statement, as required, in Schedule D- Part 2- Section 2.

Market values, where used in the determination of Association Values carried in the SVO manual, are not intended for use in valuing restricted common stocks, warrants as described in this section. Values for such restricted common stocks, warrants will not be carried in the SVO publication.

(E) Exceptions.

Where required by special conditions the foregoing standards may be varied by the Task Force.

(F) Money Market Funds Filed With The SVO Which Qualify Under Section 5(A)(a)(i)(4)(a)

(listing not included for purposes of this issue paper)

21. Several states have statutes that address valuation of common stocks not listed in the Valuation of Securities Manual. In addition, one state (Delaware) clarifies the definition of common stock. See excerpts below:

- Delaware Statutes - Insurance Laws, Title 18 Insurance Code, Part I, Chapter 13 - Investments, Section 1311:

  As used in this section the term "common stock" includes transferable certificates of participation in business trusts.

- Utah Regulations - Utah Administrative Rules, Insurance, R590 Administration, Rule R590-116--Valuation of Assets

  6. Common Stocks.

  a. Common stocks are to be valued at market value. Market value as used for valuation of common stocks means in accordance with the values listed in "Valuation of Securities." For securities which are traded on a registered national securities exchange, but are not listed in that publication, market value may be established at the most recent published trade value. Securities
not listed in and not actively traded on a registered national securities exchange shall have a market value in an amount that the insurer can justify to the commissioner.

- Massachusetts Statutes - Insurance Laws, PART I. -- Administration of the Government, TITLE XXII-- Corporations, Chapter 175 -- INSURANCE, Powers and Duties of Commissioner of Insurance, 175:11A - Valuation of securities and other investments

(A)(1) Investments, shall be valued in accordance with the published valuation standards of the National Association of Insurance Commissioners. Securities investments as to which the National Association of Insurance Commissioners has not published valuation standards in its Valuation of Securities Manual or its successor publication shall be valued as follows:

(a) All obligations having a fixed term and rate shall, if not in default as to principal and interest, be valued as follows: (i) if purchased at par, at par value; (ii) if purchased above or below par, on the basis of the purchase price adjusted so as to bring the value to par at maturity and so as to yield in the meantime the effective rate of interest at which the purchase was made; or in lieu of such method, according to such accepted method of valuation as is approved by the commissioner, but no such method shall be inconsistent with valuation methods used by insurers in general, or any method currently formulated or approved by the National Association of Insurance Commissioners.

(b) Purchase price shall in no case be taken at a higher figure than the actual market value at the time of purchase, plus actual brokerage, transfer, postage or express charges paid in the acquisition of such securities.

(c) Common, preferred or guaranteed stocks shall be valued at their market value or at the option of the company, they may be valued at purchase price if purchase price is less than market value.

- Florida Statutes - Insurance Laws, TITLE XXXVII-- INSURANCE, Chapter 625 -- Accounting, Investments, and Deposits by Insurers, Part I. Assets and Liabilities, 625.151- Securities valuation

(1) Securities, other than those referred to in §§ 625.141, held by an insurer shall be valued, in the discretion of the department, at their market value, or at their appraised value, or at prices determined by it as representing their fair market value.

- Georgia Regulations, Rules and Regulations of the State of Georgia, TITLE 120. -- Rules of the Comptroller General, 120-2. Insurance Department, Chapter 120-2-5 -- Valuation Procedures and Instructions for Bonds and Stocks, 120-2-5-.01 Establishing Values

(1) Each insurer reporting stocks and bonds as admitted assets in its annual statement shall be responsible for establishing a value for such securities. Except as otherwise provided by law, the procedures for establishing such values where applicable shall be as follows:

(a) Other than the nonadmissible exceptions listed in paragraph (2) of this Rule, values must comply with the rules for valuation contained in the National Association of Insurance Commissioners' Valuation of Securities Task Force publication, Valuations of Securities, for the applicable year.

(b) Securities not listed in the National Association of Insurance Commissioners' Committee on Valuation of Securities publication Valuation of Securities shall have no value, unless, upon application to such Committee on Valuation of Securities and submission of all relevant material required by the committee, and such committee establishes a value for the securities.
Investments in Common Stock, (excluding investments in common stock of subsidiary, controlled, or affiliated entities)  

Generally Accepted Accounting Principles

22. FAS 115, paragraph 12, provides the following guidance with respect to common stocks:

Investments in debt securities that are not classified as held-to-maturity and equity securities that have readily determinable fair values shall be classified in one of the following categories and measured at fair value in the statement of financial position:

a. Trading securities. Securities that are bought and held principally for the purpose of selling them in the near term (thus held for only a short period of time) shall be classified as trading securities. Trading generally reflects active and frequent buying and selling, and trading securities are generally used with the objective of generating profits on short-term differences in price. (Note: remainder of paragraph not reproduced as not applicable to equity securities)

b. Available-for-sale securities. Investments not classified as trading securities (nor as held-to-maturity securities) shall be classified as available-for-sale securities.

23. Paragraph 13 of FAS 115 discusses reporting changes in fair value and states the following:

Unrealized holding gains and losses for trading securities shall be included in earnings. Unrealized holding gains and losses for available-for-sale securities (including those classified as current assets) shall be excluded from earnings and reported as a net amount in a separate component of shareholders' equity until realized. Paragraph 36 of FASB Statement No. 109, Accounting for Income Taxes, provides guidance on reporting the tax effects of unrealized holding gains and losses reported in a separate component of shareholders' equity.

24. Paragraph 14 of FAS 115 discusses income recognition and states the following:

Dividend and interest income, including amortization of the premium and discount arising at acquisition, for all three categories of investments in securities shall continue to be included in earnings. This Statement does not affect the methods used for recognizing and measuring the amount of dividend and interest income. Realized gains and losses for securities classified as either available-for-sale or held-to-maturity also shall continue to be reported in earnings.

25. Paragraph 16 of FAS 115 discusses impairment of securities and states the following:

For individual securities classified as either available-for-sale or held-to-maturity, an enterprise shall determine whether a decline in fair value below the amortized cost basis is other than temporary. For example, if it is probable that the investor will be unable to collect all amounts due accounting to the contractual terms of a debt security not impaired at acquisition, an other-than-temporary impairment shall be considered to have occurred. If the decline in the fair value is judged to be other than temporary, the cost basis of the individual security shall be written down to fair value as a new cost basis and the amount of the write-down shall be included in earnings (that is, accounted for as a realized loss). The new cost basis shall not be changed for subsequent recoveries in fair value. Subsequent increases in the fair value of available-for-sale securities shall be included in the separate component of equity pursuant to paragraph 13; subsequent decreases in fair value, if not an other-than-temporary impairment, also shall be included in the separate component of equity.

---

4 A decline in the value of a security that is other than temporary is also discussed in AICPA Auditing Interpretation, Evidential Matter for the Carrying Amount of Marketable Securities, which was issued in 1975 and incorporated in Statement on Auditing Standards No. 1, Codification of Auditing Standards and Procedures, as Interpretation 20, and in SEC Staff Accounting Bulletin No. 59, Accounting for Noncurrent Marketable Equity Securities.
26. FAS 125 provides the following guidance:

Accounting for Transfers and Servicing of Financial Assets

9. A transfer of financial assets (or all or a portion of a financial asset) in which the transferor surrenders control over those financial assets shall be accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The transferor has surrendered control over transferred assets if and only if all of the following conditions are met:
   a. The transferred assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership (paragraphs 23 and 24).
   b. Either (1) each transferee obtains the right—free of conditions that constrain it from taking advantage of that right (paragraph 25)—to pledge or exchange the transferred assets or (2) the transferee is a qualifying special-purpose entity (paragraph 26) and the holders of beneficial interests in that entity have the right—free of conditions that constrain them from taking advantage of that right (paragraph 25)—to pledge or exchange those interests.
   c. The transferor does not maintain effective control over the transferred assets through (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 27-29) or (2) an agreement that entitles the transferor to repurchase or redeem transferred assets that are not readily obtainable (paragraph 30).

10. Upon completion of any transfer of financial assets, the transferor shall:
   a. Continue to carry in its statement of financial position any retained interest in the transferred assets, including, if applicable, servicing assets (paragraphs 35-41), beneficial interests in assets transferred to a qualifying special-purpose entity in a securitization (paragraphs 47-58), and retained undivided interests (paragraph 33)
   b. Allocate the previous carrying amount between the assets sold, if any, and the retained interests, if any, based on their relative fair values at the date of transfer (paragraphs 31-34).

11. Upon completion of a transfer of assets that satisfies the conditions to be accounted for as a sale (paragraph 9), the transferor (seller) shall:
   a. Derecognize all assets sold
